CAREER TITLE: Electron Microscopic Aide

DOT NO:

DPS(s):

Under supervision, will assist in the preparation of tissues for electron microscopy:

- Cutting them sections of plastic embedded tissues.
- Observing tissues with the electron microscope.
- Photographic darkroom techniques - developing, printing, enlarging.

*SEPULVEDA VETERANS ADMINISTRATION HOSPITAL

CAREER CLUSTER: Health and Welfare*

CAREER TITLE: Human Resources Management Trainee

DOT NO:

DPS(s):

- Assists in the outline and development of training programs for employees, including management and administration.
- Performs an internal audit; collects and analyzes personnel data (e.g. information on new employees, terminations for the First Quarter).
- May summarize data and outline information for reporting purposes.
- May assist in the writing of reports.

*BLUE CROSS

CAREER CLUSTER: Health and Welfare*

CAREER TITLE: Micro Biological Aide

DOT NO: 041.081

DPS(s):

Under supervision, will assist in the making of media to be used in culturing of bacteria:

- Doing dilutions - pipeting.
- Running centrifuges.
- Generally aiding the microbiologist in all tasks involved with the growing of bacteria.
- Possible use of radioactive isotopes in performing various experiments.

*SEPULVEDA VETERANS ADMINISTRATION HOSPITAL

CAREER CLUSTER: Health and Welfare*

CAREER TITLE: Physical Therapy Aide

DOT NO: 355.878

DPS(s):

Prepares patients for treatment by physical therapist:

- Assists patients in dressing, undressing, and moving about.
- Places patients in position for treatment; times treatment.
- Changes linens on beds and treatment areas; cleans work areas
- Assists patients with corsets, braces, etc.
- Picks up patients in classrooms and escorts them to therapy.
- Feeds patients.
- Plans and conducts game activities.
- May assist with training of developmental skills (walking, crawling, balance, rolling, sitting) and activities of daily living.

*MC DONNEL STREET SCHOOL

CAREER CLUSTER: Library Assistant (Technical)*

CAREER TITLE: Librarian

DOT NO: 249.368

DPS(s):

- Records identifying data and due date on cards, by hand.
- Inspects returned books for damage, verifies due dates.
- Reviews records to compile list of over-due books.
- Sorts books, publications and other items according to classification code and returns them to shelves, files, or other designated storage area.
- Locates books and publications for patrons.

*BLUE CROSS

CAREER CLUSTER: Manufacturing*

CAREER TITLE: Credit and Collection Trainee

DOT NO: 168.168

DPS(s):

Under supervision, manages credit and collection department of commercial house, department store, hotel, or similar establishment:

- Checks and evaluates credit risks via Dunn and Bradstreet, bank, other references.
- Establishes customer contact by letter.
- Assigns credit limits.
- Checks and follows-up on past-due accounts.

*AMERICAN CYANAMID

CAREER CLUSTER: Manufacturing*

CAREER TITLE: Data Processing

DOT NO: 219.388

DPS(s):

Keeps records for keypunch and tabulating department:

- Learns input/output functions of disc drive computer.
- Hands on experience during actual processing.
- Possibly some minor programming.

*AMERICAN CYANAMID

CAREER CLUSTER: Manufacturing*

CAREER TITLE: Junior Accountant

DOT NO: 160.188

DPS(s):

- Verifies additions.
- Checks audits, postings, and vouchers.
- Analyzes accounts.
- Prepares statements working under supervision.

*WESTON HYDRAULICS

CAREER CLUSTER: Manufacturing*

CAREER TITLE: Purchasing Clerk (Procurement Clerk)

DOT NO: 223.368

DPS(s):

Prepares, under supervision, information and records to draw up purchase orders for procurement of material for industrial firm, governmental agency, or other establishment.

- Verifies nomenclature and specifications of purchase requests.
- Searches inventory records or warehouse to determine if material on hand is in sufficient quantity.
- Consults catalogs and interviews salesmen to obtain prices and specifications.
- Types or writes invitation-of-bid forms and mails forms to supplier firms or for public posting.
- Writes or types purchase order and sends copy to supplier and department originating request.
- Compiles records, such as of items purchased or transferred between departments, prices, deliveries, and inventories.
- Confers with suppliers concerning late deliveries.
- May compare prices, specifications and delivery dates, and award contract to bidders or place orders with salesmen or mail-order firms.
- May compute total cost of items purchased, using calculating machine.
- May classify priority regulations.
- May verify bills from suppliers with bids and purchase orders and approve for payment.

*WESTON HYDRAULICS

CAREER CLUSTER: Personal Services*

CAREER TITLE: Accounting Clerk

DOT NO: 219.488

DPS(s):

Performs a variety of routine calculating, posting, and typing duties to accomplish accounting:

- Posts details of business transactions such as allotments, disbursements, deductions from payrolls, pay and expense vouchers, remittances paid and due, checks and claims.
- Totals accounts, using adding machine.
- Computes and records interest charges, refunds, cost of lost or damaged goods, freight or express charges, rentals, and similar items.
- May type vouchers, invoices, account statements, payrolls, periodic reports, and other records.

*FARMERS INSURANCE GROUP

CAREER CLUSTER: Personal Services*

CAREER TITLE: Cash Receipts Clerk

DOT NO: 211.468

DPS(s):

The Cash Receipts Clerk handles the clerical processes of all incoming receipts:

- Compares amount of check with transmittal from Agent's Remittance Advices.
- Attaches receipts to transmittal original copy.
- Separates Farmers New World Life and Prematic receipts from all others.
- Runs adding machine tapes.
- Assigns policy numbers.
- Separates and processes cash and non-cash mail.
- Separates P.C. notices, invoices, and payment by company of payments direct from insured.
- Performs all required operations involving name and address changes, etc.
- Allocates subrogation and salvage payments.
- Control and process returned and post-dated checks.

*FARMERS INSURANCE GROUP

CAREER CLUSTER: Personnel Services*

CAREER TITLE: Personnel Interviewer

DOT NO. 166.268

DPS(s):

Records information and evaluates information gained from applicants:

- Administers tests and interprets test results.
- Supplies information to applicants regarding policy, duties, hours, pay, and promotion.
- Maintains and prepares records of those interviewed, accepted or rejected or declining appointment.
- Discusses hiring activity with supervisors regarding selection and recruitment programs.
- Observes jobs to obtain information on job requirements and needs.
- Reviews resumes, interviews and selects applicants.

*BENEFICIAL STANDARD LIFE

CAREER CLUSTER: Product Services*

CAREER TITLE: Vending Machine Maintenance

DOT NO: 706.884

DPS(s):

Under supervision, will assist in the remodeling of vending machines:

- Installing electronic changers.
- Checking out electronic changers.
- Installing vending machines on location.

*NORTHWEST FRUIT COMPANY

CAREER CLUSTER: Trade and Finance*

CAREER TITLE: Personnel Clerk

DOT NO: 205.368

DPS(s):

Compiles and keeps personnel records:

- Types personnel information into the records.
- Operates data processing runs (making changes in personnel)
- Operates personnel record keeping system.
- Assists with payroll procedures.
- Assists with reference checking.
- Files personnel data.

*LLOYD'S BANK

CAREER CLUSTER: Trade and Finance*

CAREER TITLE: Teller Trainee

DOT NO: 212.368

DPS(s):

Under supervision, performs any combination of the following tasks:

- Provides customer service.
- Takes deposits (checking and savings).
- Cashes checks (customers and non-customers).
- Properly controls cash flow.
- Sells Cashier Checks, Money Orders, Travelers Checks, and Savings Bonds.
- Files checks.
- Becomes familiar with hold-up procedures.

*LLOYD'S BANK

CAREER CLUSTER: Transportation*

CAREER TITLE: Cashier and General Office Worker

DOT NO: 211.468

DPS(s):

Under supervision, will assist in:

- Filing.
- Telephone and cashier relief work.
- Closing out repair orders and counter tickets.

*GRANADA DATSUN, INC.

CAREER CLUSTER: Transportation*

CAREER TITLE: Storage Clerk

DOT NO: 223.388

DPS(s):

Compiles records of amount, kind, and value of merchandise, materials, or stock on hand in establishment or department of establishment.

- Computes tariffs (moving rates) according to specified procedures.
- Books orders for moving and storage.
- Answers customer requests by telephone.
- Handles collections by telephone.

*BEKINS VAN AND STORAGE

STUDENT, EMPLOYER, AND SCHOOL COORDINATOR

DATA FOR THE

COMPETENCY-BASED CAREER EXPERIENCE PROJECT

I

STUDENT DATA

Fifty-eight students from 5 high schools participated in the career experience program. These students were placed in job positions that fell into the following 13 occupational clusters--Trade and Finance, Manufacturing, Health and Welfare, Agriculture and Animal Husbandry, Communications, Government, Recreation, Transportation, Natural Resources, Product Services, Education, Personal Services and Construction. The chart on the following pages provides a summary of the student job placements and of the 58 students that participated (42 completed the program). Twelve out of the 16 dropped out for personal reasons while the other four students were involuntarily dropped by the company. A total of 48 student questionnaires were returned--17 pre-questionnaries and 31 post-questionnaires. Fifteen of the 49 students completed both pre- and post-questionnaires. Student results will be reported item-by-item for the total pre-post group rather than for the smaller matched group.

Item: Do you plan on finishing high school? (pre-post question)

This question was asked on both the pre- and post-questionnaires. All students from both the pre and post group indicated that they did plan on finishing high school.

Item: What do you plan on doing when you leave high school? (pre-post question)

Of the 17 pre-questionnaire respondents, 16 planned on attending college; the other student didn't respond to this particular item. Twelve out of the 16 also planned on working part-time while attending college.

Of the 31 post-questionnaire respondents 30 planned on attending college and 1 planned on attending trade or vocational school.

Twenty-three of the 30 planning to attend college also indicated that they would be working part-time.

Item: What is the highest level of education you hope to attain? (pre-post question)

The educational aspirations of the respondents were very high. Of the pre-questionnaire respondents 7 hoped to attain a Masters; one a Ph.D.; 8 Law, Medicine or Dentistry degrees; and one respondent wasn't sure. From the 31 student post group, 2 students hoped to attain a BA; 15 an MA; 4 a Ph.D.; 7 Law, Medicine or Dentistry Degrees. One student did not respond.

Item: If you plan on attending school beyond high school, what field or trade will be your major area of study? (pre-post question)

What kind of work do you expect to be doing in fifteen years? (pre-post question)

Responses to these questions were looked at in relation to the career experience position in which each student was placed. It appears that 14 out of the 17 pre-questionnaire responses revealed a correspondence between field or trade and career experience placement position. For example, 1 student planning to study Biology was placed as a Electron Microscopic Aide, another planning on study Special Education was placed as a Special Education Aide. Interms of occupational aspirations, 7 pre-questionnaire respondents didn't know what kind of work they expected to do 15 years from now. Of the remaining 10, a work-placement correspondence was evident for 7. For example, one respondent planning on being a Dental Hygienist was placed as a Dental Assistant and students planning on being Veterinarian were placed as either Veterinarian

Aides or Animal Caretaker.

For the post-questionnaire group, the same pattern was evident. Twenty-two of the 29 who indicated a post high school field or trade or study were well matched. For example, 1 student planning on studying computer science was placed as a Computer Programmer. Another student planning on entering the Public Health Field was placed as a Biology Lab Assistant.

Occupational aspirations and career experience job placement were also fairly congruent for this group. Of the 20 who indicated the work they expected to be doing in 15 years, 14 of them appeared to be exceptionally well placed. For example, one student planning on eventually becoming a Certified Public Accountant was placed as a Budget Analyst. Another student who planned on doing accounting work was placed as a Controller's Assistant.

Items: Have you ever worked? (pre only)

If you have worked, how long did you work, what type of work did you do and what skills did you learn? (pre only)

If you have worked, do (did) you think that your previous job experience will help (help) you in this career experience program? If "Yes", how? (pre-post)

Respondents from the pre questionnaire indicated that 16 of the 17 had worked before; 3 for pay only, 7 as volunteers only and 6 for both pay and as a volunteer, The length of time worked for this group ranged from 1½ years to 5 years. The most predominant type of work done was babysitting. Other types of jobs included yard maintenance, nurse aide, library service, bookkeeping, salesman, waitress, paper delivery or a hospital escort service. The types

of skills learned were the obvious ones. For example, child care for babysitters, gardening for yard work, processing books for library services. Skills listed, on the whole, didn't appear to be highly applicable to the job placement situation.

When the pre-questionnaire group was asked if their previous job experience would be of help to them, 7 out of the 16 said "yes". The typical response for how it would help was "working/dealing/communicating with people."

From the post-questionnaire group 11 of the 31 respondents never worked. Of the remaining 20, 7 said their previous job experience helped them in the career experience job position. As with the pre-questionnaire group, responses concerning how it helped consisted mainly of communicating/working with people.

Item: What high school course(s) have you taken that you think (were) of help to you in this career experience program? (pre-post) How has each of them helped you? (post only)

All 17 respondents from the pre-questionnaire group indicated that they had had classes that they thought would be of help to them in the position. The most frequently mentioned courses were Biology, Chemistry, English and typing.

Nine of the 31 respondent who formed the post group listed no courses that were of help to them in their career experience positions. Of the 22 who did list courses the most frequently mentioned were Biology, English and typing. Responses as to how the courses helped were extremely diverse.

Item: Put a check beside any of the following extra curricular activities (i.e. unpaid work done for parents, relatives or friends; hobbies;

school activities) that you have been involved in. Then write a brief description of the activity(ies). For each activity you describe, tell how you think (thought) the experience may be (was) of help to you in this career experience program. (pre-post)

From the pre group 11 out of 17 did unpaid work. The activities were diverse and examples are house painting, photo work, collecting for charity, babysitting, auto work, baseball coach. Of the 11 responses, 8 described how they thought this would help. Responses were again diverse. Examples include: gain self pride, contribute to taking on responsibilities and competion of a task assigned, helped me to learn some skills.

Fifteen of 17 in the pre group listed hobbies. A variety of hobbies were mentioned. Examples included: tropical fish, water and snow skiing, reading, maps, coins, tennis, jogging, carving, cars, and music. Nine of the 15 stated how they thought the experience would be of help to them. Again a diversitity of responses were given. Examples included: become healthier, getting along with others, manual dexterity for drafting, and familiar in working with dogs.

Eleven of 17 in the pre group listed school activities. Examples included: student council, key club, ski club, knights, quiz team and steering committee. Only 5 of these 11 stated how it would be of help to them. All 5 of them shared the same response. Working communication/getting along with people.

Ten of the 17 in the pre group listed non-school activities. Examples included: church youth groups and junior achievement were the two activities most frequently mentioned. Six of the ten stated how it may help in the career experience program.

Typical responses were similar to those given for school activities. (i.e. working with people and relating to people).

The same types of responses were evident in the post-question group. A diversity of activities were listed. Responses concerning how the experience helped them in their career experience position were even more varied than that of the pre group. Fewer students in the post group mentioned how the experience helped them, than the projected responses of students in the pre group.

Item: Do you feel that students should be paid for participation in this program or do you feel that getting course credit and the opportunities to learn job skills is enough to make participation in the program worthwhile? (pre-post)

Pre-post responses were highly similar. A large majority of the students felt that credit and learned skills was enough. Only 2 out of 17 in the pre group felt that students should be paid. Correspondingly only 2 out of 31 students from the post group felt that students should be paid. Interesting to note is that, even though the item was a closed response one, 6 of 28 students from the post group wrote in additional comments. In the main, these comments indicated that even though credit and learned skills was sufficient for program participation, pay would be nice.

Item: Ordinarily how do you like to work? (i.e. under close supervision, left alone until you have the job done; on your own but with someone close at hand in case you have questions or need help) (pre only)

Please check the statement that best describes the type of supervision you received and the type of supervision you would have preferred while participating in the career experience program. (post only)

Both the pre and post group preferred and received supervision with someone close at hand. Only 1 out of 17 students in the pre group wanted to work under close supervision. The other 16 wanted to work on their own with someone close at hand.

In the post group only, 4 out of 31 indicated that they actually worked under close supervision. One was left alone and 26 worked on their own with someone close at hand. Post group supervisory preference again was working on own with someone close at hand (27 out of 31). Only 3 preferred close supervision and one preferred to be left alone.

Item: Look at the following list of items. Number them in the order in which these things are (were) important to you personally in relation to this career experience program: (pre-post)

- Learning a specific job skill
- Learning what it is like to work at a job
- Opportunity for personal development (increasing self confidence, ability to communicate with others, etc.)
- Meeting new people
- Getting the chance to do something that most of the other students in your school are not doing
- Getting information that will help you in choosing or ruling out a career area for yourself
- Getting time out of school
- Making school work more meaningful by seeing how it relates to skills needed for a job
- Other

Rankings were varied for students within each of the groups. However, for both groups it appears that the most important items were "Opportunity for personal development" (pre - 8 out of 17 ranked it #1 or #2; post 10 out of 31 ranked it #1 or #2) and "Learning a specific job skill." (pre - 8 out of 17 ranked it #1 or #2; post 8 out of 31 ranked it #1 or #2).

The least important item for both groups was "Getting time out of

school." (pre - 16 out of 17 ranked it #7, #8, or #9); (post - 17 out of 3 ranked it #7, #8, or #9).

Item: Do you think that you will (have) learned things in this career experience program that you couldn't have learned by taking high school courses? (pre-post)

Both pre-post groups overwhelmingly said "yes." (17 out of 17 in the pre group and 27 out of 31 in the post group)

Items: What kind of work atmosphere do you prefer? (pre only) What kind of work atmosphere did you work in and what kind of work atmosphere would you have preferred? (post only)

From the pre group two preferred a formal work atmosphere, 14 an informal one and for one student it didn't matter. From the post group, 9 students worked in a formal atmosphere and 22 in an informal one. Only 4 out of 31 definitely wanted to work in an atmosphere different from the one in which they were in.

Item: When a sub task is completed which do you prefer? (1) To hand in the task and go on to the next task. (2) To be told how well you did on the first task before you go on to a second task (pre-only) When a sub task was completed which of the following (see above) occurred, and which would you prefer in the future? (post only) Interesting responses occurred in this item. In the pre group 15 out of 17 said they would prefer feedback before going on to the next task, and only 2 preferred to hand in the task and go right on to the next. In the post group, here's what the students said actually occurred. Twelve students said they handed in the task and went on to the next and 13 said they received feedback. For future job tasks, 27 desired feedback and only 3 wished to just hand

in the task and go on to the next.

Item: Feelings about participation in the career experience program. (pre-post)

For the pre group 13 out of 12 were very enthusiastic about beginning the career experience program and three were mildly enthusiastic. Six of the 13 very enthusiastic students concurrently were worried about how successful they would be in the program. For the post group 17 out of 31 said participation in the program was very enjoyable. Fourteen out of 31 stated it was somewhat enjoyable.

Item: How important do you feel each of the following items are (were) in contributing to student success in this career experience program? (pre-post)

- Intelligence
- Appearance
- Tact
- Motivation
- Initiative
- Pleasing personality
- Self confidence
- Punctuality
- Self respect
- Accuracy of work
- Speed of work
- Self control

Responses for the two groups were somewhat similar. For the pre group the factors that were of major importance were: (1) Dependibility (16 out of 17 respondents classified this as being of major importance); (2) accuracy of work (14 out of 17); and (3) self-confidence (14 out of 17). For the post group, factors of major importance were dependibility (29 out of 31), accurancy of work (29 out of 31), motivation (24 out of 31) and, self confidence (23 out of 31).

Factors that were most unimportant for the pre group were: (1) Prior work experience related to the career experience position (9 out of 17), (2) appearance (6 out of 17), and (3) course work related to the career experience position (5 out of 17). For the post group, the most unimportant factors were; (1) prior work experience related to career experience position (16 out of 31); (2) course work related to career experience position (9 out of 31); (3) apperance (6 out of 31); and (4) poise (6 out of 31).

Item: How well do you feel you learned the job skills for which you were being trained? (post only)

Fifteen out of 31 students responded "very well"; 12 responded "moderately well"; and two responded "not well at all."

Item: What classes did you miss as a result of participation in this career experience program? (post only)

Twenty-five students stated they missed no classes. Only 5 stated that classes were missed. None of the 5 that missed classes felt they would get a lower grade as a result.

Item: Please check the items which you feel would have made participation in the program more rewarding. (post only)

- More challenging tasks
- More task variety
- Pay
- Longer time spent at the job site
- More social communication with supervisor
- More social communication with other workers
- Opportunity to observe a range of vocations and professions actually being performed
- Periodic conferences with school coordinator to discuss experiences or problems
- More discussion with supervisor about how well job tasks were performed and what areas needed improvement
- Other

Items checked most often by students were: "More challenging tasks"

(17 out of 31); "More task variety" (14 out of 31); "Opportunity to observe a range of vocations and professions actually being performed (14 out of 31); and "More discussion with supervisor about how well job tasks were performed and what areas needed improvement (12 out of 31). Items checked the least by students were "More social communication with supervisors" (5 out of 31) and "Periodic conferences with school coordinators to discuss experiences or problems" (5 out of 31).

Item: If you could do it over again, would you have chosen to participate in this program? Describe why or why not. (post only)

Only one out of 31 said they did not wish to participate again. The stated reason was that the student missed important classwork and didn't receive the training. Common reasons for participating again were: "it was interesting", "it gave me experience and "enjoyed the people, the work, and the program."

Item: What could the school have done to make participation in the program more rewarding? (post only)

Only 7 out of 31 students provided suggestions, these included:

1. Offer pay. (2 students)
2. Give credit for going.
3. For seniors, placement in a job after graduation.
4. Extend the program in length.
5. Start earlier in the year when time is not crowded with term papers and tests.

Item: What could the employer have done to make participation in the program more rewarding? (post only)

Fourteen out of 31 students offered suggestions. These were:

1. Pay me. (3 students)

2. Allowed me to participate in interviewing job applicants.
3. Provide a wider variety of jobs. (2 students)
4. Spent more time on the steps and skills needed to learn. She went so fast.
5. Give different tasks.
6. Be present more often (supervisor away for 2 weeks on business trip).
7. Spend more time with me.
8. Review of how well I did.
9. Take me on a tour of the school, let me attend more classes, learn how to toilet the kids.
10. The incentive of a summer job if work was well done.
11. Feedback on how well I did.

Item: To what extent do you feel that the items listed below interferred with participation in this career experience program? (post only)

- Classwork
- Social life
- Responsibilities at home
- Sports activities
- Hobbies

The majority of students stated that the program did not interfere at all with these items. Very much interference was reported by only four out of 31 in the areas of sports, two out of 31 in the area of hobbies, and one out of 31 in the areas of classwork, social life and responsibilities at home.

Item: Should students who have successfully completed the career experience receive assistance in finding a job from the school or participating employer? (post only)

Nineteen out of 31 students stated assistance in finding a job should

be provided by both school and employer. One stated assistance should be provided by the school only, and three stated it should be provided by the employer only.

Item: In general, how would you evaluate the program? (post only)

Thirteen out of 31 evaluated the program as being "very satisfactory." Eighteen stated it was "satisfactory." No one evaluated the program as being unsatisfactory.

II

EMPLOYER DATA

In all, 42 Employer Questionnaires were received for processing. Of these, 25 were "pre-employment" questionnaires 17 were "post-employment" questionnaires. Only 11 supervisors returned both questionnaires. In addition, one post-employment questionnaire (for an inventory clerk at Bekins Van and Storage) was returned but not filled out. On the form, the employer stated that the student had only come to work for one week; therefore, the employer was unable to complete the questionnaire for the student. The 42 forms represent 32 different students. In almost all cases, each supervisor responding had only one student worker; however, at Chatoak Pet Clinic and at Miller High School, the supervisors had two student workers from the program. These supervisors did not fill out a separate questionnaire for each student, as was expected, but used one form to respond for both students.

The remainder of this action will consist of brief descriptions of the responses given by the supervisors to the questionnaire items. Because of the diversity of job types and the job specificity and open-endednes of many of the items, generalizations are difficult to make. However, any apparent trends in the data are noted. Wordings of the items are taken from the post-employment questionnaire except where an item appeared on the pre-employment questionnaire only.

Item: Indicate with a check mark how helpful you think what the student

1 learned in school was in their work experience program placement. Versions of this item appeared on both pre and post questionnaire. Most respondents in both cases said that they expected the student's school experience to be "somewhat helpful." Of the 11 respondents who returned both pre and post forms. Six gave the same answer on

the post questionnaire of the helpfulness of schoolwork; all of these changes were one step downward on the scale. One employer who felt enable to respond to this item on the pre questionnaire answered "somewhat helpful" on the post.

	Pre	Post
Very Helpful	8	5
Fairly Helpful	3	3
Somewhat Helpful	11	7
Not Helpful	1	2
No Response	2	0
Total	25	17

Item: 1a Briefly explain how their school learning was helpful (or not helpful) in their work experience placement.

This question appeared in slightly different forms on both questionnaires.

The answers given were either meaningless ("This work experience placement will allow the students the opportunity to apply the knowledge and skills acquired in school to practical situations") or the obvious ones that anyone could have thought of (the supervisor for a cashier pointed out that a "general knowledge of arithmetic is essential").

The item added no substantive information over and above #1 and should not be re-used.

Item: 2 Indicate with a check mark how helpful you think the student's experiences outside of school were in the student's work experience placement.

Again, revisions of this item appeared on both forms of the questionnaire. As the table indicates, opinion varried considerably on this item. Of the 11 supervisors who returned both forms, 5 gave the same response on both pre and post; 2 changed their responses in a downward direction

and two failed to response on the post (one of these commented that the item was "not applicable").

	Pre	Post
Very Helpful	10	2
Fairly Helpful	6	3
Somewhat Helpful	4	6
Not Helpful	2	1
No Response	3	4
No Page for	0	1
Total	25	17

Item: 2a Briefly explain how you expect their experiences outside of school to be helpful (or not helpful) in their work experience placement. This item appeared on both questionnaires. As was the case with item #1a, this question generated little substantive information. A number of the employers commended that they knew nothing of the student's activities outside of school. Several appeared confused as to the meaning of the item. Several mentioned possible hobbies that could be related to the student's job. Many remarked that general "interpersonal" skills, whether acquired in school or out, would be useful to the student in his job placement. This item should not be re-used.

Item: 3 Based on the student's performance, how likely is it that he or she could get a full time job in this area upon graduation?

	Pre		Post	
	Your Co.	Another Co.	Your Co.	Another Co.
Very Likely	8	5	6	3
Fairly Likely	5	8	5	4
Somewhat Likely	6	7	3	4
Not Likely	4	1	2	3
No Response	2	4	0	2
No Page for	0	0	1	1
Total	25	25	17	17

Item: In general, the employers indicated that there was at least
3a some prospect for job openings in their fields for the students on a full-time basis following graduation. The employers seemed to feel the prospects for the students were slightly better with companies than with another company. Of those employers responding on both pre and post changed their estimates (there was no trend in the change) presumably on the basis of the individual student's job performance. Two of the employers made comments in connection with this item. A supervisor at Sepulveda Veterans Hospital noted that "full-time lab aides are sometimes an extravagance." A supervisor in the Mayor's office remarked that "the City does not employ editing clerks." These comments support the assumption that in some cases the student jobs (as represented in the job title and descriptions) were not ones for which real openings exist in the job market.

Item: To what extent do you think the student's work experience placement
4 was enjoyable and satisfying work?

Of those responding on both pre and post forms, 5 gave the same response on both, 3 indicated that the student's experience was less enjoyable and satifying than they had anticipated it would be, but 2 said it was more enjoyable. (These same two supervisors--the one for the architectural drafting assistant at U.S. Customs and the one for the EKG Technician at Sepulveda Veterans Hospital--were highly enthusiastic in general about their student workers' performances.)

	Pre	Post
Very Enjoyable	6	4
Fairly Enjoyable	12	6
Somewhat Enjoyable	4	4
Not Very Enjoyable	1	2
No Response	2	0
No Page for	0	1
Total	25	17

Item: Breifly explain the ways in which the student derived satisfaction
4a and enjoyment from their work experience.

Employers mentioned both the satisfaction to be dervied from putting one's skills to use in a real job setting and the enjoyment that comes from having the opportunity to deal with people and enhance one's skills in this area. The following were typical comments:

> "Charlotte was treated as an adult, and this was pleasing to her; she learned about Youth Programs and Services, and began to understand how her tasks fit into the larger picture of the City as the program ended."

> "It gave him some experience in relating to patients and operating in a hospital routine, which is satisfying since the students plans to be a doctor."

> "To be able to gain self-confidence in both technical areas and learning to work with people gaining satisfaction and enjoyment."

Answers did not differ in form between pre and post questionnaire.

Item: Briefly explain what kinds of things were dissatisfying to the
4b student in their work experience placement.

On the pre-questionnaire, the great majority of respondents indicated that they expected student dissatisfaction to arise mainly from the mundane and repetitive nature of much of the work they would be likely to do. On the post-questionnaire, respondents made more mention of the short period of time (both in the program overall and for each work period) available for the program. In addition, it appeared that several students had been mis-matched with jobs (either from the

student's or the employer's point of view, or both). The supervisors from the hospital and the handicapped children's schools mentioned that being around and having to deal with large numbers of ill people was an upsetting factor for their student workers.

Item: To what extent (do you think you will be/were you) satisfied
5 with the student's work?

	Pre	Post
Very Satisfied	17	11
Fairly Satisfied	4	3
Somewhat Satisfied	1	2
Not Very Satisfied	1	0
No Response	2	0
No Page For	0	1
Total	25	17

As indicated in the table, most supervisors both expected to be, and were, very satisfied with the students' work. On the post-questionnaire, only three of the 11 respondents answering both forms gave a response that differed from their expectation. Two (Chatoak Pet Clinic and L.A. Convention Bureau) were more satisfied that they expected to be; the Farmers Insurance superivosr of the cash receipts clerk was less ("fairly" as opposed to "very") satisfied than expected.

Item: Briefly explain the kinds of things that (will satisfy/satisfied)
5a you with the student's work.

It appeared that most of the employers completed the pre-questionnaire item after the students had started work, since a number of the answers relate to the specific student. Therefore, the responses do not necessarily indicate what expectations the employers hold before the start of the program. Responses on both forms vary widely. Most of the employee qualities queried later on the forms are

mentioned here: motivation, willingness, initiative, accuracy, punctuality, ability to work well with others and rapidly learning capacity. Most of the answers concentrated on these general qualities. Employers responding on both pre and post gave similar responses in each case.

Item: 5b Briefly explain the kinds of things that (will make you dissatisfied/ dissatisfied you) with the student's work.

On both questionnaires, employers most often mentioned the following sources of potential and real dissatisfaction: lack of motivation (boredom, disinterest), tardiness (absence, leaving early), poor quality or incomplete work, poor preparation for the type of work in which placed, slowness in learning, inability to follow instruction, sloppiness, and time schedule conflicts.

Item: 6 What kinds of skills and knowledge (are necessary for the student to perform well/do you believe the student learned) in their work experience placement?

Most responses here were specific to the type of job in which the students was placed, although respondents on the pre-questionnaire tended to list somewhat more general skills. On the post-questionnaire, responses were to be separated into two categories: Skills and Knowledge. This served no purpose: it is impossible--and meaningless to attempt to make descriptions of skill distinct from descriptions of knowledge.

Item: 7 What kinds of things do you hope to teach the student in their work experience program? (pre only)

As for the previous item, the responses here were job-specific; no useful generalizations can be made.

Item: To what extent do you think such a work experience program (will
8 be/is) generally helpful in preparing a student to assume a full-time job in the world of work? (Item #8 pre and #7 post)

Item: To what extent do you favor having students gain work experience

11 with your company?

	Pre	Post
Very Much in Favor	10	12
Fairly Favorable	12	3
Somewhat in Favor	1	2
Not in Favor	0	0
No Response	2	0
Total	25	17

Of those supervisors who returned both forms, two revised their estimates upward (from "fairly favorable" to "very much in favor") and two downward (from "fairly favorable" to "somewhat in favor").

Item: Please list the kinds of things that could be changed in the work

11a experience program that would make it more valuable for your company and the participating student. (post only)

Respondents mentioned the following (in order of importance: students should spend a longer period in the program; better selection/screening methods are needed; employers should have more background data on the students; students and employers should have more interaction with the school coordinator; students should receive more orientation about their job placement; program should be retined in general (handbooks, better evaluation procedures); employers should have more advance notice regarding program and specific student placement; students should have more counseling during program; there should be more flexibility in the student's time schedule; students chosen

should be those with greatest need for work experience; all concerned should show a greater interest in program.

Item: 12 Due to an error in the compiling of this questionnaire, the heading of this item was omitted. The responses cannot be evaluate. (pre only)

Item: 12a What type of work atmosphere best describes your company? (post only)

Eleven employers indicated that their work atmosphere was "formal" (with clear lines of responsibility and authority), while 6 characterized their work atmosphere as "informal."

Item: 13 What is your main reason for agreeing to participate in this career experience program? (pre only)

There were only seven respondents for this item and their answers varied considerably. Most, however, made some mention of the opportunity this would give for students to get first-hand experience in a work situation. Several said that the idea of expanding their existing staff had attracted them to the program.

Item: 13a In what ways do you feel that participation in this career experience program has benefitted your company? (post only)

	Yes	No	No Opinion	No Response	Total
Recruited permanent personnel	3	10	3	1	17
Attained closer contact and communication with academic institutions	11	3	2	1	17
Provided opportunity to screen employees, leading to a reduction of employee turnover	2	8	5	2	17

Item:		Yes	No	No Opinion	No Response	Total
13a Continued	Release other employees from more basic work tasks	8	7	1	1	17
	Provided an important community service	10	1	5	1	17
	Provided a highly motivated source of temporary part-time employment	9	3	3	2	17
	Updated the school curriculum through contact with school coordinator	6	6	3	2	17
	Provided an opportunity to obtain and evaluate job training methods	6	5	3	3	17
	Fulfill affirmative action requirements set forth by the government	4	4	6	3	17

As the table shows, employees in general felt that participation in the program had (1) helped them attain closer contact and communication with academic institutions and (2) provided an important community service.

Item: 14 To what extent (will the job be/was the job) in which the student was placed a modification of an already existing position within the company? (Item #14 pre and #15 post)

	Pre	Post
Greatly Modified	1	3
Somewhat Modified	3	6
Not at All	3	6
No Response	0	0
Other	0	2
Total	7	17

Two respondents on the post-questionnaire said that there was no previously existing job of this type for which the student was hired. (Editing clerk at the Mayor's Youth Programs Office and the Budget Analyst position in the U.S. Customs Environmental Resources Branch). Most respondents said that the student jobs had been simplified, in

part because of the short program time. Several supervisors mentioned that the student workers had fewer responsibilities. The fact that the work was on a part-time basis also necessitated modifications in some cases.

Item: Has your company every participated in a work experience program
14a with other learning institutions?

Nine employers said "yes" and 8 said "no." The supervisor of the Electron Microscope Aide at Sepulveda Veterans Hospital said he had participated in a work experience program involving high school students. The Special Education Aide supervisor (Miller High School) and the supervisor of the Personnel Clerk at IRS had participated in programs involving both high school and college students. The supervisors at the Mayor's Office, U.S. Customs Environment Resources Branch, Chatoak Pet Clinic, Sepulveda Veterans Hospital (EKG Section), and Litton Data Systems said that work experience programs in which they had participated involved only college students. At the Chatoak Pet Clinic and Veterans Hospital EKG Section, these students were graduate students in medicine or veterinary medicine.

Item: Do you feel that the students should have been paid for their
16 participation in the career experience program? (post only)

Nine supervisors answered "no," while 7 said "yes." Those responding "no" gave the following reasons: (1) it would be the same as paying the student for going to school, (2) there is no provision for it in the compnay pay set-up, (3) the experience itself is sufficient reward for the students' work, (4) the students were not experienced applicants for the position, (5) the employer had not been involved in the selection of the student.

Those responding "yes" felt that: (1) pay would give the students more incentive, (2) getting paid for the work would make the job experience more realistic, (3) the students do work that the regular paid staff would otherwise have had to do, (4) the experience is not worth the student's time otherwise.

The supervisor at the Chatoak Pet Clinic did not respond "yes" or "no"; rather he commented that the program could be revised into 2 stages - training and actual work. Once the students were involved in "actual work," they could be paid, he felt.

If students were to be paid, 3 felt that funds should come from the employer only, 1 from the school district only (from "work study funds"), 3 from a government grant. One respondent indicated that funds should come from both the employer and government, and another thought that salary should be paid from a combination of employer, school and government funds. None thought that funds should come from the community directly. One supervisor who felt that the employer should pay, added, though, that "insurance would limit us."

Item: 17 Has a school coordinator from a participating school visited your company in connection with this career experience program? (post only)

Only 6 of the 16 employers responding had been visited. Those claborating on the visit indicated that the student's performance and possible openings at the company for more student workers were among the topics discussed. One supervisor was not sure whether his company had been visited. If used in the future, this item should be reworded, possibly, to obtain information as to whether or not the supervisor himself had been visited by the coordinator.

Item: Does your company have a training program for new employees? (pre
18 only)

Seven employers responded to this item, of whom, 3 said "yes" and 4 said "no." Those who said "yes" added that the student worker would be participating in this program.

Item: How would you describe the opportunities for advancement in the
18a career area in which the participating student was placed? (post only)

One employer (Chatoak Pet Clinic) said the opportunities were excellent. Nine employers responded "good," 3 said "fair," and two said "poor." None said "very poor." Two supervisors did not respond to this item. One employer who indicated that the opportunities were poor gave reasons to this elsewhere in the questionnaire. The supervisor of the Editing Clerk at the Mayor's Youth Program Office said that no such job existed on the city payroll.

Item: Do you have any reservations about your company's participation in
19 this career experience program? (pre only)

Three of the 7 supervisors responding said "yes." All three indicated that the source of their reservations was whether or not the student worker had been adequately screened and prepared for the type of work he was to do in the program.

Item: Which of the following statements best describes the degree of
19a supervision that the student (will receive/received) during the career experience program? (#19 post and #16 pre)

	Pre	Post
Students will be given direction and close supervision while working on his tasks.	2	3
Student will be expected to work on tasks on his own, but someone will be close at hand if he has questions or needs help.	5	14

Item:		Pre	Post
19a Continued	Student will work independently until a task is completed.	0	0
	Total	7	17

Item: 20 When a job task (is/was) completed by the student, which of the following (will occur/occurred)? (post and #17 pre)

Of those responding, over both forms, all except 2 said that the student would be/was told how well he did on the completed assignment (and what improvements, if any, were needed) before being given another task. Two respondents on the post questionnaire (the Editing Clerk supervisor at the Mayor's Office and the Professional Resume Assistant's supervisor at Atlantic Richfield) said that the student simply "handed in the work and then was assigned another task."

Item: 21 Did your company provide information about the career experience program to others outside the company?

Only one of the 17 employers said "yes" (the IRS supervisor). Nine said "no" and 6 said they didn't know. One supervisor did not respond. The supervisor at IRS said that other schools (and "the school board") and the Civil Service Commission were given information about the program through "group meetings."

Item: 22 Should students who have successfully completed the career experience program receive assistance in finding a job from the school or the participating employer? (post only)

Nine of the 17 supervisors said that assistance should be provided by both the school and the employer. Three said that assistance should be provided by the school only. Three said they felt that the student should assume full responsibility for finding a job. None

said that assistance should be provided by the employer only. Two supervisors did not respond.

Item: How important do you feel that each of the following goals/
23 objectives are for a career experience program?

Of the goals/objectives listed, the respondents felt these to be the most important:

- Personal development (self-confidence, poise, initiative, etc.).
- Basis for selecting or ruling out a career area.
- Student awareness of and knowledge of skills needed for progress in a particular area.
- Transition experience from school to full-time work.

They listed "decreasing students dropout rate" and "reinforcement of theories and principles learned in the classroom and observation of applications of these theories and principles in actual job situations" as least important among the items.

Item: How important do you feel each of the following factors were in
24 contributing to student success in the career experience program?

The employers as a group designated the following personal qualities as most important for student success: intelligence, tact, motivation, initiative, self-confidence, punctuality, self-respect, accuracy of work, self-control, dependability, and ability to work well with others.

Rates least important were: prior work experience related to career experience position, and course work related to career experience position.

Item: How well do you feel the student learned the job skills for which
25 he/she was being trained?

Item: Nine supervisors responded "very well," and 7 said "moderately
25 well. None answered "not well at all." (One supervisor did not
Continued respond.)

Item: How many times did the student miss work?
26 The range of absences was 0-9 for the 18 student workers. Only 4 students had no absences. Four students were absent once, 3 were absent twice, 2 were absent approximately 3 times, one was absent 5 times, and one 9 times. The supervior of the student who was absent 9 times indicated elsewhere on the questionnaire that this student had wanted a different position, and was unmotivated to do the work called for by the position in which she was placed. On the other hand, the supervisor of the student who was absent 5 times gave evidence throughout the questionnaire that he was otherwise highly enthusiastic about the student and pleased with his work.

Item: Do you feel that students should have a course devoted to preparing
27 them for participation in a job situation taken at the same time or just before participating in the career experience program? Seventeen employers responded. Ten said "yes," 5 said "no," and two were "not sure."

Item: If you could do it over again, would you have chosen to participate
28 in this program?
Twelve supervisors said "yes," 3 said "it depends," and 1 said "no." Those who answered "yes" said that the program was worthwhile, the students had given a valuable contribution to the staff, and the supervisors had liked the students who had worked for them. Those who said "it depends" mentioned better screening of students as a requirement for their future participantion. One of these also

Item: said that "closer coordination with the school" would be a requirement for his future participation in the program. No one employer

28 Continued who said "no" commented that he didn't need any more student workers--he currently had a full staff.

Item: If you would consider participation again, would you be interested

29 in accepting a large number of students?

Nine employers said that they would not be interested in accepting a larger number of students. Seven employers said "yes," while one employer, as indicated in Item #27, was not interested in participating again in the program. The supervisors who responded "no" all gave as their reason the fact that their company (or the specific section in which the supervisors worked) had small staffs and they could not accommodate any more students. Finding adequate time and personnel to handle training of the students would also be a problem they said.

Item: What changes would you like to see made in the career experience

30 program to make it a more rewarding and beneficial experience for the company? (post only)

The comments made by the employers are exemplified succinctly by the response given by the supervisor of the Survey Worker in the Mayor's Youth Programs Office: "Longer placement, better counseling." Employers in addition called for more hours to be spent on the job each working day, and better screening procedures for student applicants." Two said they knew of nothing that could be done to make the program better from the company's point of view. Four supervisors did not respond to this item.

Item: What changes would you like to see made in the career experience
30a program to make it a more rewarding and beneficial experience for the student? (post only)

In this section of the item, responses were more varied. Two employers thought that paying the students would make the program better from the student's point of view. Several mentioned better student preparation and screening for the job placement, longer time for the program, and longer working hours. One employer commented that only students who really needed the jobs should be chosen for the program. One thought that if students could travel or work over a larger area in Los Angeles (U.S. Customs Environmental Resources Branch), they would benefit more, at least in that job placement. Four employers did not respond.

Item: If you had it to do overagain, what would you do differently
31 concerning the level and types of responsibilities assigned to students and the supervisory techniques used to maintain student performance? (post only)

Nine employers said that they would not do anything differently. There is no generalization that can be made about the remaining responses: each was different. Among them were: (1) train student more specifically in the job, (2) get more background information on student and schedule an individualized work plan for him in advance, (3) give the students more basic responsibilities, (4) provide tighter supervision, (5) try to meet with school counselor, (6) have reading materials available for students. Three employers did not respond.

Item: How have the regular employees reacted to student participation
32 in the career experience program? (post only)

All the employes responding said that the reaction of the regular employees had been favorable. The words "enthusiastic," "fine," "very well" appeared again and again in the comments. One supervisor did not respond.

Item: Has the exposure of the regular employees to the student affected
33 the employees adversely in any way that you have notice (e.g. less productive, sloppier work habits, etc.)? (post only)

All responded "no" to this item.

Item: In what ways, if any, have the regular employees benefited? (post
34 only)

Four employers indicated that the regular workers benefited by having the students around to perform the more basic tasks, thereby releasing the regular staff for more substantive work. The student workers also relieved some of the pressure arising from heavy work loads, helping to speed along the work done by the office. Two employers spoke of the employees' satisfaction arising from their feeling of participation in a school-related program. Two mentioned that the supervising procedure itself was a benefit because it helped regular staff achieve a greater sense of responsibility and better understanding of their own work (from having to explain it to someone). Three employers did not see any ways in which the regular employees had benefited from the presence of the student workers. Four employers did not respond to this item.

Item: Check the items that, if implemented, would in your opinion
35 improve the career experience program? (post only)

Eight employers marked, "more school-employer communication." Eight marked "handbook describing objectives of the career experience program and its operating procedures." Eleven supervisors desired "background information about the student similar to that obtained on an employment application or interview," and wanted to "increase the time students spend in the program." None wished to decrease the time students spend in the program. Eight though that "student follow-up to obtain information useful for program modification and revision" would improve the program. One employer thought that none of the listed items seemed particularly useful. One employer did not respond.

Item: Please evaluate the student according to the traits listed below.
36 (post only)

Overall, students got the highest ratings on the following traits: intelligence, accuracy at work, ability to work well with others, quality of work, and "potential for future improvement and development as he/she matures." Students got lowest marks for: appearance, tact, motivation, initiative, self-punctuality, and speed at work (worst). One employer did not respond to any part of this item.

Item: In general, what occurred when problem(s) arose concerning student
37 behavior?

Fourteen of the 17 employers said that "no problems arose." Of the three who did have problems, two handled them by "contacting the school and talking to the student." One simply "talked to the student." The problems arose from (1) student absences, (2) student

disappointment in task assignment. One employer who had a problem with the student worker not showing up also complained that the student had not informed him when the program ended. In handling problems with the students, none of the employers chose the option of simply contacting the school without speaking to the student about it, or "letting it go by."

Item: 38 Would you recommend that the student should continue studying toward this type of occupation? (post only)

Eight employers said "yes"; 4 said "no"; three had no opinion; and 2 did not respond.

Item: 39 How can the school help this person become a better candidate for employment, in general? (post only)

Four employers talked about the need for the student to have more specialized training (in school) related to the job area in which he was placed. (This would not seem to be an appropriate answer to the question.) Several responded in terms of the program, saying that if the program were modified (to provide more background information to employers, more counseling, more follow-ups, longer work time, a "trail-period," pay), the student would become a better candidate for employment. (This again does not seem to be an answer to the question, since the students being inquired about have already completed the program.) Several mentioned that the school should help the student improve his social skills (e.g. overcome his shyness, be more open and ask questions) and general work habits (punctuality, reliability). One employer said that the school should provide more work experience for the student. One supervisor stated that he had no opinion on the question and 4 did not respond.

Item: What are the student's special traits? (post only)

40 Pleasing personality, intelligence, an eagerness to learn, dependability and the ability to follow directions were the most frequently mentioned traits.

Item: What are the student's special weaknesses? (post only)

41 Six employers did not discover any weaknesses in their student workers. The other employers mentioned the following undesirable traits they had noted: lack of motivation and initiative (2), lack of punctuality (1), unfamiliarity with work (1), being distracted by friends (1), undeveloped interpersonal skills (1), shyness (1). Four employers did not respond to this item.

Item: Please describe what means were use to determine how well the

42 student learned the job skills for which he/she was being trained. (post only)

Six employers said "observation" and six said "end product." One mentioned comparing the instructions given the student with the product completed by the student. One alluded to the student's proficiency while performing a task. One employer said "none." One employer did not respond.

Item: What could the school have done to make the program more successful?

43 Frequently mentioned suggestions were (1) provide more background information about the student to the employer, (2) give employers more advance notice-generally do more planning ahead, (3) do a better job of screening the students for the specific positions, (4) make the program longer, (5) communicate more with both the student and the employer.

Item: In general, how would you evaluate the program? (post only)

44 Three supervisors -- Sepulveda Veterans Hospital (Electron Microscope Aide Supervisor), U.S. Customs (Budget Analyst Supervisor and the Architectural Drafting Assistant Supervisor) said "very satisfactory." Three employers--Cash Receipts Clerk Supervisor at U.S. Army Engineering District, and the Editing Clerk Supervisor at the Mayor's Youth Programs Office said "unsatisfactory." The remaining supervisors who responded replied "satisfactory." One supervisor did not respond. The supervisor of the Cash Receipts Clerk at Farmers Insurance left a number of the items on the questionnaire blank. It was not clear what the source of his dissatisfaction with the probram was. The supervisor of the Editing Clerk seemed more positive about the program in general when responding to other portions of the questionnaire than his response on this item would indicate. The Editorial Assistant Supervisor allueded at many points in the questionnaire to the student's dissatisfaction with her job placement and her disinterest in the type of work she was doing in the program. This was clearly a large factor in the supervisor's overal evaluation of the program.

Item: Check the item below that best describes your feelings about

45 participation in the career experience program. (post only)

Six employers described their participation in the program being "very enjoyable," while 8 found it "somewhat enjoyable." Two employers had no feelings one way or the other. One employer did not respond.

(20) (11)

POSTTEST (# 14 on Pre.)
STUDENT Q.

9. Do you feel that students should be paid for participating in this progra or do you feel that getting course credit and the opportunity to learn job skills is enough to make participation in this program worthwhile?

SCHOOL	CREDIT & LEARNED SKILLS ENOUGH	PAY	* (WRITE IN)	NO RESPONSE	TOTAL
Granada	~~IIII~~ ~~IIII~~ ~~IIII~~ II	I		0	18

* Not as many jobs would become available if pay was given. Certain fields do not open easily to teenagers.
It would be a good practice if students worked without pay for a given length of time and then were hired. The student would feel he is accomplishing even more, and that his time and training hadn't been useless.
More satisfying program if student could have a paying job after the voluntary program was completed.

Belmont	III	0	–	1	4
Van Nuys	I	0	–	0	1
Roosevelt	III	0	Plus Gas Mileage		3
Manual Arts	IIII	1	–	0	5
	28	2	-	1	31

Granada
* (con't) Credit and skills enough if student is not being unfairly taken advantage of; i.e. repetitious work that is easily learned. When the students stops learning because he isn't being taught anything new and he can handle the work as well as any other employee, he should be hired.
Pay would be nice, though.
But money sure would help!

25. If you could do it over again, would you have chosen to participate in this program? Describe why or why not.

SCHOOL	YES	NO	NO RESPONSE	TOTAL	WHY/ WHY NOT	NO RESPONSE	TOTAL
Granada	IIII	0	0	18	It has gotten me a summer job and an experience I could not otherwise have had. Opportunity I could not otherwise have gotten. Most worthwhile thing I've done so far in High School Reference is a good one. I've seen what jobs in offices are like. I hope to get a summer job there. I benefited from it, and enjoyed it. It was fun. I got to know some people at CSUN that I feel will be valuable to know I enjoyed it, and I think it is a worthwhile and fulfilling experience. To gain experience in field. Workman's compensation very helpful. I was interested and wanted to do it. It was interesting and I was able to use college lab facilities. Got to work with C. It gave me some parctical experience in business. It was valuable in helping me rule out accounting as my field of study. I enjoyed the people I worked with. Because I learned what it's like to work at a job. Enjoyed working at a bank, and have some experience which is helpful when applying for It's the field which interests me. ** Only if it offered pay.	1	18
Belmont	III	0	1	4	People were friendly, job was enjoyable, was doing something of interest to me. Enjoyed the job I was performing. People I work with were excellent people.	1	4
Van Nuys	1	0	0	1	Enjoyed being able to work around animals. New things learned and experienced.	0	
Roosevelt	III	0	0	3	Would like to have written assignments and lessons on what to do before going there. Enjoyed program very much, and through the program have met many different kind of people	1	
Manual Arts	III	1*	0	3	Enjoyed the work atmosphere. It's a very good experience. I am glad to have been exposed to a program like this one. The experience.	1	
	29	1	1	31	26	5	

* Missed important classwork. I did not receive the training.

POSTTEST
STUDENT Q.

26. What could the school have done to make participation in the program more rewarding?

SCHOOL	RESPONSE	NO RESPONSE	TOTAL
Granada	Start earlier in the year when time is not crowded with term papers and tests. Nothing //// School could have xeroxed the first form so I wouldn't have to fill out a million forms with the same dumb questions. Offer pay.	//// ////	18
Belmont	Extend the program in length. Nothing //	1	4
Van Nuys	I don't know.	0	1
Roosevelt	Gave credit for going. For seniors, placement in a job after graduation. Nothing.	0	3
Manual Arts	Nothing. // Pay. School did not have any participation in the training.	1	5
	//	12	31

POSTTEST
STUDENT Q.

2/. What could the employer have done to make participation in the program more rewarding?

SCHOOL	RESPONSE	NO RESPONSE	TOTAL
Granada	Would have appreciated being told how well or poorly I was doing or being complimented every now and then on a job well done, instead of only corrected when I did something wrong, although I realize this was mostly the employer's personality. The incentive of a summer job if work was well done. Given me more variety in tasks and a broader view of the school as a whole. Nothing. // Taken me on a tour of the school, and let me attend more classes. Learn how to toilet the kids. Given me a review of how well I did. I never talked to the supervisor more than 2 minutes at a time, more often than not, not even about the job. Spent more time with me. Offered to pay the student. //	7HH/	18
Belmont	Been present more often. My supervisor was away on a business trip for two weeks. Give different tasks. Nothing.	1	4
Van Nuys	Provide a wider variety of jobs.	0	1
Roosevelt	Spent more time on the steps and skills needed to learn. She went too fast. Nothing //	0	3
Manual Arts	Paid me. Nothing. The employer could have allowed me to participate in interviewing job applicants.	11	5
		9	31

POSITIVE
STUDENT Q.

33. What did you like best about the career experience program?

SCHOOL	RESPONSE	NO RESPONSE	TOTAL
Granada	It was something I was interested in. The people I worked with. I liked being able to talk to the Controller. It gave me some knowledge of insurance. The chance to learn skills not taught in school. The P.A.s. It gave me experience in an interested field. The experience, free use of the computer, use of the library. It was fun. Not any one thing in particular. Learned about office procedure, met new people. The chance to experience work without the full commitment. Working on the college campus; trying new and different jobs. Being able to work in field I enjoy and receiving credit. Coordinator was very concerned with each student's welfare and spent a great deal of time typing to find jobs that the students enjoyed. No job pressure. Opportunity to see what this type of work was like, and it helped me in deciding what I would like to get into in college. Felt like a regular employee at the Pet Clinic. Opportunity to learn more about a career which I was interested in. Would never have been able to work there without being in this program.	1	18
Belmont	The people. They were friendly and very easy to get along with. The opportunity itself. Had my own desk and phone. I wasn't in anyone's way and they weren't in m	1	4
Van Nuys	Chance to observe and work with animals that I would otherwise not be in contact with.	0	1
Roosevelt	The times I got the job right. Helping other people. It's a good idea - I'm glad there is this program.	0	3
Hamilton	The experience learning about the world of work. Experience. The career experience helped my typing abilities.	11	5
		4	31

POSTTEST
STUDENT Q.

34. What did you like least about the program?

SCHOOL	RESPONSE	NO RESPONSE	TOTAL
Granada	The hours. Filling out forms. // Nothing // Paying for parking, paying for punch cards. Not receiving pay. It was make work, boring, tedious and mismanaged. That I was doing things just as well as others but not getting paid. It got boring working in the reading lab all the time. I did work the other did everyday, and no incentive of summer job or pay. It only lasted 7 weeks. Trying to find parking space. Some tedious work. I didn't like how mechanically everyone did their work, talking one word an hour. No guarantee of a job after completing the program. Have some regrets about spending so much of my free time working without pay and for Not being told how well I was doing, so I never really knew if I was performing what was expected, although I assume I would have been corrected if I was doing something wrong.	//	18
Belmont	Lack of close supervision. The briefing or contracts.	//	4
Van Ruys	I didn't get to do a great a variety of jobs as I had hoped.	0	1
Roosevelt	Transportation was too long. Nothing. //	0	3
Manual Arts	Missing typing class. Especially since my typing is terrible. Nothing. The location and time of the job.	//	5
	25	6	31

POSTTEST
STUDENT Q.

35. Please list the main reasons for the degree of success you experienced while participating in the career experience program

SCHOOL	RESPONSE	NO RESPONSE	TOTAL
Granada	Interested in learning. It's something I's interested in. My skill in drafting. Able to follow directions. Being able to follow instructions. Friendly people. My skill and ability. Accuracy and speed. Everyone involved cooperated well (myself included). I had the basic abilities and knowledge needed for the job and the people were very helpful. It was well organized. Everybody was friendly so I felt well received. My lack of programming knowledge was a hinderance. Received experience, self assurance, gave possible future job ideas to me. People whom I worked with were very nice, and I am interested in the kind of work I was doing. Patience, ability to get along with others, help from the people I worked Freedom to experiment, informal atmosphere, more sophisticated equipment. I was willing to do any work I was assigned, even though many of the tasks were unpleasant. Other employees were very helpful and cheerful and seemed to appreciate the work I was doing. I tried my best to pay attention to what I was taught so that I would not do it wrong when I was expected to do something on my own.	IIII	18
Belmont	My desire to participate. Tried my best at everything I did, so that I wouldn't let Belmont or the school I represented down. I proved to myself that I could do the job.	II	4
Van Nuys	No matter what I did I could always learn something.	0	1
Roosevelt	I finished the job quick. What to expect of some comtomers and how to deal with them. What steps to do in cashing a check. I have learned how to work with younger children and also understand what I can do to help and make everything easier for them.	0	3
Manual Arts	Don't Know.	III	5

EMPLOYER PRETEST DATA

Background Information

Deacribe Responsibilities of Job:

Library Assistant (Technical), Blue Cross Library: Filing cards, assisting in library circulation control, control of overdues, assist library technician in library catalog control and other general library activities.

Cashier and General Office Worker, Granada Datsun, Inc.: Cashier for all depts. Answer telephones, filing, closing out repair orders and counter tickets.

Editing Clerk, Youth Programs, Mayor's Office: Help in the organization of newsletter for Youth Advisory Council. Help in setting up P.R. Training for Communications Committee.

Survey Worker (Research and Data Collection Assistant): 1) Identification and verification of youth services; 2) gap and duplication identification; 3) telephone contact; 4) Youth Services Directory development; 4) Service category development; 5) filing.

Physical Therapy Aide, McDonnell Street School: Assists in feeding of certain patients. Assists with putting on and removal of braces.

Special Education Aide, Lokrantz Elementary School: Help instruct children in areas of motor development, language development, perceptual activities and self-awareness. Learn to relate to physically handicapped children. Read stories, System 80, etc.

Junior Accountant, Weston Hydraulics: Account Analysis Schedules; Export Sales Controls; Special asset Inventory; Various special assignments.

Architectural Drafting Assistant, Logistics Management Division, Space and Communications Branch, Treasury Department, U.S. Customs Service: Incumbent works under the general supervision of the Branch Chief and under the immediate direction of a staff Space and Communications Specialist. Incumbent is responsible for drawing architectural plans for construction of new Customs facilities and remodeling existing facilities. Also assists in developing construction specifications.

Electrocardiogram Technician, Sepulveda Veterans Administration Hospital: To take electrocardiograms and to mount them for reading (interpretation) by the doctor.

Statement Clerk, Security Pacific National Bank: Customer Service--Statement window; customer service--incoming bookkeeping calls; perform miscellaneous clerical duties.

Research Assistant, Promotion Department, Los Angeles Convention and Visitors Bureau, Inc.: To introduce the student to brochure production, he researches a variety of sources to select pertinent L.A. County information. Then follows the steps necessary to bring about a new informative guide.

Employer Questionnaire I

Background Information

Describe Responsibilities of Job:

Electron Microscopic Aide, Sepulveda Veterans Hospital: This student's responsibilities include darkroom processing of electron microscope negatives--including printing, drying, and labeling--plus maintaining darkroom print processors and preparation of chemicals. General laboratory maintenance--glassware, water filtration system. Help with ordering and data filing. Assisting in processing of tissues for observation with the electron and light microscopes.

Animal Caretaker, Pettigrew Science Center: Grooms, feeds, and waters farm animals and poultry; cleans and disinfects pens, stables; prepares reports on health and conditions of animals; may assist "board animal caretaker" in simple veterinary treatment; and may help teachers in selection of loan animals.

Cash Receipts Clerk (Cashier), Farmers Insurance Group: Verify money on receipts. Run tapes on checks and receipts and balance totals. Endorse and stamp checks.

Teller Trainee, Lloyd's Bank: Filing checks. Compiling and mailing statements. Learning basic balancing procedures.

Travel Consultant, Travelwise: To make travel arrangements for clients, airline, hotel, car reservations, and airline tickets. To also cost out the client's travel plans.

Various Shop Jobs, Northwest Fruit Company: Assembly, soldering, welding, wiring.

Editorial Assistant, U.S. Army Engineer District (Environmental Resources Division): Edits those parts of reports that include fiscal data and pertinent physical data for various engineering reports; checks material in reports for extraneous matter, clarity of expression, completeness, conciseness, correct grammatical usage, spelling, punctuation, logical arrangement, correctness of form and layout, and proper degree of emphasis on individual subjects in proportion to their relative importance; checks tables, plates, and graphs for consistency with text; checks all formats; rewrites paragraphs or parts thereof on parts of reports cited above; types rewritten parts of drafts of reports, new tables; and carefully check this new or rewritten material to insure that it is correct.

Microbiological Aide, Sepulveda Veterans Hospital: To make media, to autoclave the media and other items, and to be able to dispense media aseptically. Hope she learns enough techniques to aid in experiments.

Dental Assistant, Riley Dental Corp.: Assist dentist, file records, make appointments, pour impressions, develop Xrays (not take), clean up rooms and office.

Veterinarian Aide, Chatoak Pet Clinic: This is not really applicable to the above students as they are both top students and want to be veterinarians..

Describe Responsibilities of Job:

Miscellaneous Engineering Duties, Dickerson/Gladstone Associates: General junior draftsman responsibilities, blueprinting, Xeroxing, back-tracing, drafting (copying), lettering, specification proofreading, calculations (checking), occasional pick up and delivery.

Data Processing, American Cyanamid: Observe work patterns. Follow Sys-3 process and determine proper halt procedures, program and use of data recorder and sorter. Learn program techniques and write short program.

Accounting Clerk, Farmers Insurance Group: Applying cash to accounts. Sending bills and adjusting miscellaneous cash.

Finance Assistant, Atlantic Ritchfield: Registering and maintaining contract file. Miscellaneous computations on project reports for joint venture partners.

Employer Questionnaire I

1. *Indicate with a check mark how helpful you think what the student has learned in school will be in their work experience program placement.*

Very helpful

Blue Cross (Library Aide)
Security Pacific Bank (Statement Clerk)
U.S. Customs (Architectural Drafting Assistant)
Granada Datsun (Cashier)
Veterans Hospital (EKG Technician)
Dickerson/Gladstone Associates (Engineering)
Chatoak Pet Clinic (Veterinarian Aide)
Veterans Hospital (Electron Microscope Aide)

Fairly helpful

Mayor's Office (Editing Clerk)
U.S. Army Engineering District (Editorial Assistant)
Travelwise (Travel Consultant)

Somewhat helpful

L.A. Convention and Visitors Bureau (Research Assistant)
Mayor's Office (Survey Worker)
Lokrantz School (Special Education Aide)
Weston Hydraulics (Junior Accountant)
McDonnell Street School (Physical Therapy Aide)
Farmers Insurance (Accounting Clerk)
Riley Dental Corporation (Dental Assistant)
Veterans Hospital (Microbiological Aide)
Northwest Fruit Company (Shop Worker)
Farmers Insurance (Cash Receipts Clerk)
Atlantic Ritchfield (Finance Assistant)

Not helpful

American Cyanamid (Data Processing)

No response

Lloyd's Bank (Teller Trainee)[1]
Pettigrew Science Center (Animal Caretaker)

[1] *"Unable to fairly and adequately determine"*

1a. Briefly explain how you expect their school learning to be helpful (or not helpful) in their work experience placement:

Library Assistant (Technical), Blue Cross Library: "School library knowledge very helpful in giving student appreciation of library procedures."

Cashier and General Office Worker, Granada Datsun: "General knowledge of arithmetic essential."

Survey Worker (Research and Data Collection Assistant), Mayor's Office, Youth Programs: "I expect that the school learning will have imparted skills in the following areas: Research problem and information analysis and efficiency (ability to perform given tasks within a particular timeframe). These are skills that would be particularly helpful in this work experience placement."

Physical Therapy Aide, McDonnell Street School: "I can't really say--I know nothing of his past or present schedule of classes."

Special Education Aide, Lokrantz Elementary School: "Academic background and maturity will aid in a general way."

Junior Accountant, Weston Hydraulics: "Dependent on amount of accounting courses taken. In the case of above student, school exposure was somewhat helpful in ability to more easily understand work assignments, instructions and duties."

Architectural Drafting Assistant, Logistics Management Div., Treasury Dept., U.S. Customs: "This work experience placement will allow the student the opportunity to apply the knowledge and skills acquired in school to practical situations."

Electrocardiogram Technician, Sepulveda Veterans Hospital: "Their school learning is not particularly helpful in this job. General knowledge and a willingness to work and learn are the main criteria for this job."

Statement Clerk, Security Pacific National Bank: "Karen has received on the job training. She has worked with customers both with telephone service and statement window service."

Research Assistant, L.A. Convention and Visitors Bureau: "Basic reading and writing skills, of course, but the student who budgets his time, who uses the library and keeps up to date on current events will stand out upon graduation."

Accounting Clerk, Farmers Insurance Group: "Doubt that formal education is beneficial."

Data Processing, American Cyanamid: "School learning should stress good attendance, on time arrival and attentive attitude when learning."

Misc. Engineering Duties, Dickerson/Gladstone Associates: "General mathematics, background and drafting experience should prove most helpful. Students generally need additional help in letter which as a rule has not been stressed sufficiently in school."

Veterinarian Aide, Chatoak Pet Clinic: "Gives them exposure to the responsibilities of a veterinarian."

Dental Assistant, Riley Dental Corp.: "General education; how to behave among the patients. All medical training is taught by the staff and myself at my office."

Microbiological Aide, Sepulveda Veterans Hospital: "Her knowledge of chemistry and biology should be helpful in making reagents and media."

Editorial Assistant, U.S. Army Engineer District (Environmental Resources Branch): "Courses in English reading and comprehension, grammar, and typing would be helpful in this particular work experience placement. Also courses in written composition would be helpful."

Various shop jobs, Northwest Fruit Co.: "Shop classes are helpful if they ha taken any and theory is also helpful, particularly in electrical testing and assembly."

Travel Consultant, Travelwise: "I believe any experience in the business community has to be helpful."

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance Group: In cash receipts, they would be using adding machines and typewriters and knowledge of checks and bookkeeping.

Animal Caretaker, Pettigrew Science Center: "School activities (learning) is very helpful because the job requires that the student: keep written records of animal health, living conditions, and feed consumption; compute animal and feed needs; read about various animals and their needs."

Electron Microscopic Aide, Sepulveda Veterans Hospital: "Learning in school has been helpful for this position since he is able to comprehend scientific terms usually unfamiliar to the layman--especially metric measurements--and is familiar with biological concepts, therefore able to understand our projects without needing the basics explained to him."

Finance Assistant, Atlantic Ritchfield: "Unable to answer."

2. *Indicate with a check mark, how helpful you think experiences outside of school will be in the student's work experience placement.*

Very helpful	~~////~~	~~////~~
Fairly helpful	///	///
Somewhat helpful	//	//
Not helpful		//
No response	/	//

2a. Briefly explain how you expect their experiences outside of school to be helpful (or not helpful) in their work experience placement.

Library Assistant (Technical): Prior knowledge of the work setting will be very helpful to advance in a true job situation.

Cashier and General Office Worker: Will be able to acquire a job as a cashier for automotive and will eventually be able to progress to doing journal work.

Editing Clerk, Youth Programs: Introduce student to procedures to follow in large organization. Familiarization with outside resources.

Survey Worker (Research and Data-Collection Assistant): The basic skill that I expect that the student would have learned outside of the school environment would be the skill of relating and cooperating with differing persons.

Physical Therapy Aide, McDonnell Street School: Again--can't say.

Special Education Aide, Lokrantz Elementary School: The broader the exposure to many experiences increases the awareness and understanding of others.

Junior Accountant, Weston Hydraulics: Requires exposure to accounting. Present student assists in keeping accounting records for his father's business.

Architectural Drafting Assistant, Customs Service: Any productive work experience in inter-personal relationships is considered a valuable asset in the mission of the Space and Communications Branch.

Electrocardiogram Technician, Veterans Hospital: Very helpful if he wants to get a job as an EKG technician. The experience will be helpful in acquainting him with the routine of a hospital and in giving patient care should he choose a health field.

Statement Clerk, Bank: Basic "getting along with people." Learning to listen to people's problems or complaints.

Research Assistant, Promotion Dept., Convention and Visitors Bureau: Aware of advertising and its methods.

Accounting Clerk, Farmers Insurance: Experience on job only real help.

Data Processing, American Cyanamid: Hands on experience and some job knowledge (even minor) has to be helpful.

Engineering, Dickerson/Gladstone Associates: Their experience outside of school should prepare them in the real world of business.

Veterinarian Aide, Chatoak Pet Clinic: Again it lets them see what is is they are hoping to be doing in future years.

Dental Assistant, Riley Dental Corporation: Experiences outside of school could be helpful if this experience was associated with the medical field.

Microbiological Aide, Sepulveda Veterans Hospital: I have no idea what her experiences are outside of school; therefore I have no idea whether or not they would be helpful.

Editorial Assistant, U.S. Army Engineering District: A student who reads a variety of publications and books outside of school would find that that experience would be helpful in this particular work experience placement.

Shop Worker, Northwest Fruit Company: Hobbies and interests such as working on cars or electronic kits of various types are helpful in learning the shop skills.

Travel Consultant, Travelwise: School learning in math, geography, typing, and reading is important to travel.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: Learning how to work with all ages.

Animal Caretaker, Pettigrew Science Center: Hobbies such as riding horses and hiking would be especially helpful because the student will be caring for both domestic animals and wild animals of California.

Electron Microscope Aide, Sepulveda Veterans Hospital: His experiences out of school are not as necessary for this position except for knowledge of mechanics--for the use and maintenance of our apparatus and instruments.

Finance Assistant, Atlantic Ritchfield: Not applicable.

3. If the student does a good job, how likely is it that he or she could get a full time job in this area upon completion of school?

With your company:

Very likely

Granada Datsun (Cashier)
Security Pacific (Statement Clk.)
Vets Hosp. (EM Aide)
Farmers (Cash Receipts Clk.)
Lloyd's (Teller Trainee)
Riley Corp. (Dental Assist.)
Chatoak (Veterinarian Aide)
Dickerson/Gladstone (Engin.)

Fairly likely

Weston Hydraulics (Jr. Accountant)
U.S. Customs (Architect. Assist.)
Travelwise (Travel Consultant)
U.S. Army (Editorial Assistant)
Farmers Ins. (Accounting Clk.)

Somewhat likely

Veterans Hospital (EKG Tech.)
Mayor's Office (Survey)
Blue Cross Library (Library Assist.)
Atlantic Ritchfield (Finance Assist.)
Northwest Fruit Co. (Shop Worker)
Veterans Hospital (Microbiol. Aide)

Not likely

McDonnell Street Schl. (Phys. Ther.)
L.A. Convention Bur. (Research Assist.)
Mayor's Office (Editing)
American Cyanamid (Data Processing) "Fully staffed"

No response

Lokrantz Schl. (Spec. Ed.) "Not applicable"
Pettigrew Science Center (Animal Caretaker)

Item #3

With another company:

Very likely

Granada Datsun (Cashier)
Farmers Ins. (Cash Receipts Clerk)
Lloyd's (Teller Trainee)
Riley Corp. (Dental Assistant)
Dickerson/Gladstone (Engineering)

Fairly likely

Mayor's Office (Editing)
Blue Cross Library (Library Aide)
U.S. Customs (Architectural Drafting)
Weston Hydraulics (Junior Accountant)
McDonnell St. Schl. (Physical Therapy)
Veterans Hospital (EKG Technician)
Veterans Hospital (Electron Microscope Aide) "Full-time"
Northwest Fruit Company (Shop Worker)

Somewhat likely

Mayor's Office (Survey Worker)
Atlantic Ritchfield (Finance Assistant)
Travelwise (Travel Consultant)
US Army (Editorial Assistant)
Veterans Hospital (Microbiological Aide)
American Cyanamid (Data Processing)
Farmers Insurance (Accounting Clerk)

Not likely

L.A. Convention Bur. (Research Assistant)

No response

Security Pacific Bank (Statement Clerk)
Lokrantz Schl. (Special Education Aide)
Pettigrew Science Center (Animal Caretaker)
Chatoak (Veterinarian Aide)

4. *To what extent do you think the student's work experience placement will be enjoyable and satisfying work?*

Very enjoyable

Veterans Hospital (Electron Microscope Aide)
Travelwise (Travel Consultant)
Riley Corp. (Dental Assistant)
Dickerson/Gladstone Assoc. (Engineering)
Security Pacific Bank (Statement Clerk)
Granada Datsun (Cashier)

Fairly enjoyable

Farmers Insurance (Cash Receipts Clerk)
Lloyd's Bank (Teller Trainee)
U.S. Army (Editorial Assistant)
Chatoak Pet Clinic (Veterinarian Aide)
L.A. Convention Bureau (Research Assistant)
Blue Cross (Library Assistant)
Mayor's Office (Survey Worker)
U.S. Customs (Architectural Drafting Assistant)
Lokrantz School (Special Education Aide)
Weston Hydraulics (Junior Accountant)
McDonnell Street School (Physical Therapy Aide)
Veterans Hospital (EKG Technician) [1]

Somewhat enjoyable

Atlantic Ritchfield (Finance Assistant)
Northwest Fruit Company (Shop Worker)
Veterans Hospital (Microbiological Aide)
American Cyanamid (Data Processing)

Not very enjoyable

Farmers Insurance (Accounting Clerk)

No response

Pettigrew Science Center (Animal Caretaker)
Mayor's Office (Editing Clerk)

[1] *"For Al it may be fairly enjoyable as a temporary job"*

4a. Briefly explain the ways in which you expect them to derive satisfaction and enjoyment from their work experience.

Library Assistant (Technical): By acquiring a greater degree of self-reliance and confidence in their ability to perform in a work environment.

Cashier and General Office Worker, Granada Datsun: She is in constant contact with the public and this will make her more self-assured in what she is doing and will enable her to progress as she learns how to handle the job without constant supervision.

Editing Clerk-, Mayor's Office: Satisfaction can be derived from a measure of professionalism experienced, the people associated and if work is done well, the sense of achievement in a professional area.

Survey Worker (Research and Data Collection Assistant), Mayor's Office: The ways in which this experience could be satisfactory would be: increase in the student's sense of self-worth and ability to cope with the real world; knowledge of city processes; contact with community programs and services affecting youth; sense of contributing to a large cooperative effort.

Physical Therapy Aide, McDonnell Street School: Learning to deal with other workers. Learning to deal with children and the associated problems of a crippled child.

Special Education Aide, Lokrantz Elementary School: The experience of being around children with their uncomplicated approach to life should be enjoyable.

Junior Accountant, Weston Hydraulics: We attempt to assign duties which will provide as much exposure to accounting functions as possible in the short time permitted.

Architectural Drafting Assistant, Customs Service: Exposure of the student to the day-to-day operations of an organization utilizing his particular skills should result in certain intangible personal benefits to him or her.

Electrocardiogram Technician, Veterans Hospital: Al would probably enjoy the job very much as a part-time or temporary job while he is in college, because it relates to his goal of becoming an M.D. He seems to enjoy himself while here and does an excellent job.

Statement Clerk, Bank: To be able to gain self-confidence in both technical areas and learning to work with people gaining satisfaction and enjoyment.

Research Assistant, Promotion Department, Convention and Visitors Bureau: A "work" environment as opposed to a classroom offers an exchange with adults in a new manner. He has a function, duties and becomes a peer of others around him. Seeing research progress to a printed end satisfies a creative drive.

Employer Questionnaire I
Item #4a

Accounting Clerk, Farmers Insurance: "Student appears too academic."

Data Processing, American Cyanamid: "Head start on others in field and satisfaction of taking assignment to completion."

Engineering, Dickerson/Gladstone Associates: "1) An opportunity to interface their school experience with professionals. 2) An opportunity to apply their academic studies to real problems and situations."

Veterinarian Aide, Chatoak Pet Clinic: No response.

Dental Assistant, Riley Dental Corporation: "The student will receive satisfaction from helping the patients. The job is enjoyable because the work is different each day."

Microbiological Aide, Sepulveda Veterans Hospital: "I hope the student receives satisfaction by learning new tasks and mastering these tasks."

Editorial Assistant, U.S. Army Engineering District: "The student would derive satisfaction and enjoyment from this work experience placement by exercising her skills learned in school on a professional level and by the actual experience of being in a professional setting and observing how the business world functions."

Shop Worker, Northwest Fruit Company: "By learning to use their hands effectively as well as their minds."

Travel Consultant, Travelwise: "When they perform a service for a client and makes a sale. To deal with adults in a business manner."

Teller Trainee, Lloyd's Bank: "Exposure to the operational procedures of a bank; meeting and coming into contact with downtown business people."

Cash Receipts Clerk, Farmers Insurance: "It's different than what they do in school."

Animal Caretaker, Pettigrew Science Center: "The student should derive much satisfaction from knowing how to care for animals and knowing how they are used. In addition the enjoyment of knowing how to properly care for pets and knowing information about the wildlife of our state should be a source of enjoyment that will last a lifetime."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Our student will derive satisfaction (hopefully) from his job because he will learn darkroom techniques and be producing the final visual product of our research. It will also be enjoyable since he will learn photographic techniques that he can use in his own hobby of photography."

Finance Assistant, Atlantic Ritchfield: "Projects which can be completed during the student's stay should be assigned, thus giving the satisfaction of accomplishment."

4b. Briefly explain what kinds of things you expect to be dissatisfying to the student in their work experience placement.

Electron Microscope Aide, Sepulveda Veterans Hospital: "Housekeeping duties--glassware, etc."

Animal Caretaker, Pettigrew Science Center: "Total responsibility for animals. Constant cleaning up after animals. Handling of some animals (mice, snakes, etc.).

Cash Receipts Clerk, Farmers Insurance: "Could be very boring."

Teller Trainee, Lloyd's Bank: "Perhaps the more routine and repetitious aspects of teller/banking responsibilities."

Travel Consultant, Travelwise: "To have to perform menial tasks."

Shop Worker, Northwest Fruit Company: "None that I can think of."

Editorial Assistant, U.S. Army Engineering District: "The only thing that I can think of that would be dissatisfying to the student in this work experience placement is that not enough time is allowed for the student to participate in this program."

Microbiological Aide, Sepulveda Veterans Hospital: "By coming in only a couple of days a week, the student can never follow an experiment from beginning to end; therefore, the small things they do probably seem insignificant."

Dental Assistant, Riley Dental Corporation: "The student might disagree with other patients."

Veterinarian Aide, Chatoak Pet Clinic: "See some of the physical labors involved."

Engineering, Dickerson/Gladstone Associates: "None."

Data Processing, American Cyanamid: "Book study and stand alone. Homework, also work may become repetitive."

Accounting Clerk, Farmers Insurance: "See 4a and too routine." "Student appears too academic."

Electrocardiogram Technician, Sepulveda Veterans Hospital: "Possibly too routine a job for his capabilities."

Physical Therapy Aide, McDonnell Street School: "Not enough time nor enough contact with the patients."

Junior Accountant, Weston Hydraulics: "Since, generally, the students do not yet have sufficient outside, or school exposure, most assignments require a good deal of detail accounting work."

Special Education Aide, Lokrantz School: "The routine cleanup and "dirty" work could prove to be monotonous."

Cashier, Granada Datsun: "Perhaps the confinement of the cashier's office as it is a very hectic place at certain times of the day."

Finance Assistant, Atlantic Ritchfield: "All assignments may not be attractive (Example: Filing, repetitive work). Would probably depend on person."

Architectural Drafting Assistant, U.S. Customs: "Often, situations shall arise whereby the student shall learn that in a job environment, the demands of his resources for the maximum benefit of the organization shall result in exposure to certain unexpected pressures."

Survey Worker, Mayor's Office: "Items which might be dissatisfying might be: complexity of project and the amount of unglamorous work required, and the lack of organized social activity."

Statement Clerk, Security Pacific Bank: "Learning to deal with irate customers sometimes can be hard!"

Editing Clerk, Mayor's Office: "Processes in some areas are long and delayed at times. This can prove to be discouraging. Also, it is fairly easy to over project goals and become dissatisfied when time and other limitations do not allow for achievement of goals."

Library Aide, Blue Cross: "Probably the routine nature of the job."

Research Assistant, L.A. Convention and Visitors Bureau: "To a highly motivated student, the gathering of source material might seem mundane and tedious."

5. To what extent do you think you will be satisfied with the student's work?

Very satisfied

Veterans Hospital (EKG Technician)
McDonnell Street School (Physical Therapy Aide)
Weston Hydraulics (Junior Accountant)
Lokrantz School (Special Education Aide)
Granada Datsun (Cashier)
U.S. Customs (Architectural Drafting Assistant)
Mayor's Office (Survey Worker)
Security Pacific Bank (Statement Clerk)
Blue Cross (Library Aide)
Mayor's Office (Editing Clerk)
Atlantic Ritchfield (Finance Assistant)
Veterans Hospital (Electron Microscope Aide)
Farmers Insurance (Cash Receipts Clerk)
Travelwise (Travel Consultant)
Northwest Fruit Company (Shop Worker)
Riley Dental Corp. (Dental Assistant)
Dickerson/Gladstone Associates (Engineering)

Fairly satisfied

U.S. Army (Editorial Assistant)
Veterans Hospital (Microbiological Aide)
Chatoak Pet Clinic (Veterinarian Aide)
L.A. Convention Bureau (Research Assistant)

Somewhat satisfied

Farmers Insurance (Accounting Clerk)

Not very satisfied

American Cyanamid (Data Processing)

No response

Pettigrew Science Center (Animal Caretaker)
Lloyd's Bank (Teller Trainee)[1]

[1] "Unable to adequately determine"

5a. Briefly explain the kinds of things that you think will satisfy you with the student's work.

Library Assistant: Giving encouragement and realizing that the student is actually acquiring more job maturity.

Cashier and General Office Worker, Granada Datsun: She has a very nice personality and an aptitude to learn quickly. Everything she has done, she has done well. She gets along well with the other employees.

Editing Clerk, Mayor's Office: A student in this position having the basic skills should be able to cope with responsibility. The student should be self-starting with initiative to follow through on tasks.

Survey Worker (Research and Data Collection Assistant), Mayor's Office: I would be satisfied if the student was conscientious and able to work with little supervision.

Physical Therapy Aide, McDonnell Street School: Tyrone is eager and has an air of maturity about him that is hard to find in a boy of his age.

Special Education Aide, Lokrantz Elementary School: Her willingness to do what is asked of her. The friendly manner she has with all she comes in contact with.

Junior Accountant, Weston Hydraulics: Present student very quick to grasp assignment instructions. Very able to work on own with very little additional supervision required, and with very few errors.

Architectural Drafting Assistant, Customs Service: The student's attention to detail and his/her desire to learn.

Electrocardiogram Technician, Veterans Hospital: The student is very responsible, learns quickly, does a thorough and accurate job and has a pleasant personality.

Statement Clerk, Bank: Karen's attitude is great. Her ability to learn is above average. She gets along with management and her co-workers very well.

Research Assistant, Promotion Dept., Convention and Visitors Bureau: He is punctual, takes directions well and continues quietly on his project.

Accounting Clerk, Farmers Insurance: Student's lack of interest will probably make the student's work unsatisfying to me.

Data Processing, American Cyanamid: "See 1a." School learning should stress good attendance, on time arrival and attentive attitude when learning.

Engineering, Dickerson/Gladstone Associates: Enthusiasm and motivation.

Veterinarian Aide, Chatoak Pet Clinic: Their willingness to do all jobs.

Dental Assistant, Riley Dental Corporation: His (or her) personality towards the patients. Being efficient and reliable. Being cooperative and able to follow directions.

Microbiological Aide, Sepulveda Veterans Hospital: The student is eager and quick to learn things. I will be satisfied, if, when she leaves, she can perform all the tasks listed in Question 7.

Editorial Assistant, U.S. Army Engineering District: A command of English grammar, punctuation, and apelling; reading comprehension; and typing ability. Also, the student should have experience in written composition.

Shop Worker, Northwest Fruit Company: Interest in his job. Promptness. Ability and desire to stick with it. Ability to take instruction. Ability to work with other personnel.

Travel Consultant, Travelwise: To be able to see a student develop. Example how to answer a telephone properly.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: Accuracy. Neatness.

Animal Caretaker, Pettigrew Science Center: Neatness, responsible, eager to learn--growth in learning about and handling animals.

Electron Microscope Aide, Sepulveda Veterans Hospital: His work will satisfy our need for more time to do certain specialized duties while he can help take care of routine work.

Finance Assistant, Atlantic Ritchfield: Previous work experience. Conscientiousness. Neatness. Accuracy.

5b. *Briefly explain the kinds of things that will make you dissatisfied with the student's work (List at least four things).*

Editing Clerk, Youth Programs, Mayor's Office:
"Dissatisfaction could come from a number of areas. Lack of initiative. Improper preparation (duty of program). Lack of basic skills."

Research Assistant, L.A. Convention and Visitors Bureau:
"Perhaps shy, the student doesn't "reach out." A conversation with him is one-sided. Don't believe I am either talking over his head or talking down to him, he just seems quiet. He understands the overall project and sees the step-by-step process yet shows no drive. I had asked for someone with a demonstrated "flair" for writing or interest in public relations/advertising and he does not seem directed in these fields."

Library Assistant, Blue Cross:
1. *Time it takes to learn*
2. *Lack of work field expertise*
3. *Immaturity of approach*
4. *Time involved in training*

Statement Clerk, Security Pacific Bank:
"None"

Survey Worker, Youth Programs, Mayor's Office:
"Four things that would dissatisfy me are:
1. *Not showing up for work*
2. *Not listening to instructions*
3. *Work of such poor quality that it has to be redone*
4. *Substantial conflict with supervision*

Architectural Drafting Assistant, U.S. Customs Service:
1. *Inattention to details of architectural planning*
2. *Tardiness*
3. *Unreliability*
4. *Disinterest*

Cashier and General Office Worker, Granada Datsun:
"Tardiness--Not treating the customers courteously--Leaving people hanging on the phone without going back in to let them know you are still aware they are waiting--A lot of talking instead of attending to work."

Special Education Aide, Lokrantz School:
"Needs to use a little more initiative perhaps. There are no other suggestions."

Junior Accountant, Weston Hydraulics:
"More experiences with present student."

Physical Therapy Aide, McDonnell Street School:
(Tyrone doesn't show any of these things)
1. *Lack of attendance*
2. *Inappropriate behavior around children*
3. *Lack of respect for fellow workers*
4. *Criticizing without knowledge*

Employer Questionnaire I
Item #5b

Electrocardiogram Technician, Veterans Hospital:
"Al has done nothing that would make us dissatisfied, but in general, sloppiness, irresponsibility in taking tracings, mounting them, or chronic tardiness or absence would make us dissatisfied."

Finance Assistant, Atlantic Ritchfield:
"Errors; sloppy work habits; lack of interest and desire to learn."

Electron Microscope Aide, Sepulveda Veterans Hospital:
"1. Time needed to train.
2. Only working half day--many projects take longer."

Animal Caretaker, Pettigrew Science Center:
"1. Not doing the work needed.
2. Not showing up.
3. Not showing interest in activities.
4. Not asking questions (freely) about animals and activities.

Cash Receipts Clerk, Farmers Insurance:
?

Teller Trainee, Lloyd's Bank: No response

Travel Consultant, Travelwise:
"Time--working one or two days a week is very hard to learn."

Shop Worker, Northwest Fruit Company:
"No interest in his work.
Not dependable.
Unable to take instruction well.
Inability to work well with others."

Editorial Assistant, U.S. Army Engineering District:
"If the student does not have a command of the English grammer, punctuation, spelling, reading comprehension, and typing ability, I would be dissatisfied. Also, if the student does not have experience in written composition, I would be dissatisfied."

Microbiological Aide, Sepulveda Veterans Hospital:
"1) Filling out questionnaires about student's work and progress
2) Having to pay the postage to return unsolicited questionnaires."

Dental Assistant, Riley Dental Corporation:
"Not being able to learn quick enough.
Not thinking ahead.
Not being quick when working.
Not being efficient."

Veterinarian Aide, Chatoak Pet Clinic:
"1. Anyone not getting out and doing his share.
2. Failure to show.
3. Tardy.
4. Unclean."

Engineering, Dickerson/Gladstone Associates:
"Lack of interest and motivation."

Data Processing, American Cyanamid:
"See 1a."
"School learning should stress good attendance, on time arrival and attentive attitude when learning."

Accounting Clerk, Farmers Insurance:
"1. Speed.
2. Knowledge.
3. Accuracy.
4. Interest."

6. What kinds of skills and knowledge do you believe are necessary for the student to perform well in their work experience placement?

Electrocardiogram Technician, Veterans Hospital:
1. Willingness to work and to learn
2. No specific skills or knowledge is required for this job although a course in biology and anatomy can be helpful

Physical Therapy Aide, McDonnell Street School:
1. Patience
2. Interest in working with others
3. Interest in children and problems
4. Willingness to listen

Junior Accountant, Weston Hydraulics:
1. Previous accounting classes
2. Previous outside experience
3. Ability to easily meet and work with other people
4. General education level

Special Education Aide, Lokrantz School:
1. Willingness to do a variety of activities
2. Acceptance of change in plans
3. Ability to relate to adults and children
4. Willingness to do menial chores as well as more important functions

Cashier and General Office Worker, Granada Datsun:
1. Arithmetic--very important

Architectural Drafting Assistant, U.S. Customs Service:
1. Expertise in drafting
2. Knowledge of basic architecture
3. Ability to adjust to changes in project requirements
4. Desire to cooperate with people

Survey Worker, Youth Programs, Mayor's Office:
1. Research
2. Problem and information analysis
3. Telephone survey skills
4. Time consciousness

Statement Clerk, Security Pacific Bank:
1. On-the-job training--practical experience

Library Assistant, Blue Cross:
1. Telephone experience
2. Office methods and procedures
3. Know the alphabet and follow it easily
4. Filing systems

Research Assistant, L.A. Convention and Visitors Bureau:
1. Extensive reading in many areas
2. Awareness of what's going on (TV, radio, papers)
3. Ability to outline projects quickly
4. Desire to communicate (writing/speech)

Editing Clerk, Youth Programs, Mayor's Office:
1. Basic journalism skills
2. (Editing, layout, spelling, punctuation)
3. Organizational skills
4. Typing

Finance Assistant, Atlantic Ritchfield:
1. Read and comprehend
2. Figure aptitude
3. Calculator - skill
4. Filing

Electron Microscope Aide, Sepulveda Veterans Hospital:
1. Biology - to comprehend our research
2. Chemistry - gives him the ability to make solutions needed in our research
3. Scientific terms i.e. metric measurements
4. Mechanical aptitude - darkroom equipment use

Animal Caretaker, Pettigrew Science Center:
1. Knowledge of care and feeding of various animals
2. Knowledge of living habits of various animals
3. Knowledge of health procedures for animals
4. Skill and handling and caring for animals

Cash Receipts Clerk, Farmers Insurance:
1. Typing
2. Use of 10-key adding machine
3. Bookkeeping

Teller Trainee, Lloyd's Bank:
1. Public speaking, communication
2. Basic math and accounting skills
3. Any business-related courses

Travel Consultant, Travelwise:
1. Math
2. Reading comprehension
3. Geography
4. Typing

Shop Worker, Northwest Fruit Company:
1. How to trace electrical circuits
2. How to solder
3. How to weld

Editorial Assistant, U.S. Army Engineering District:
1. Above average ability in written composition.
2. Above average ability in reading comprehension
3. Above average ability in problem solving
4. Typing (45 wpm)

Employer Questionnaire I
Item #6

Microbiological Aide, Sepulveda Veterans Hospital:
1. Knowledge of chemistry
2. Knowledge of biology
3. Ability to follow directions accurately

Dental Assistant, Riley Dental Corporation:
1. Verbal ability
2. Dependability
3. Punctuality
4. Tact

Veterinarian Aide, Chatoak Pet Clinic:
1. Willingness

Engineering, Dickerson/Gladstone Associates:
1. Drafting
2. Lettering
3. Mathematics
4. Spelling and composition

Data Processing, American Cyanamid:
1. Good reading and understanding skills
2. Logical and consistent thought process
3. Attendance and punctuality

Accounting Clerk, Farmers Insurance:
1. Knowledge of business machines
2. Basic accounting
3. Math
4. Logical judgment

7. What kinds of things do you hope to teach the student in their work experience placement?

Editing Clerk, Youth Programs, Mayor's Office:
1. Familiarization in governmental process
2. Organization of public relations skills
3. Development of public relations resources
4. Evaluation ability
5. Working within specified time frame

Research Assistant, L.A. Convention and Visitors Bureau:
1. See the "real world" with its deadlines
2. Relate with co-workers
3. Learn about communicating to public via writing
4. Organize a work day to reach set goals
5. Suggest an exchange of thoughts

Library Assistant, Blue Cross Library:
1. Speed and accuracy in filing catalog cards.
2. Check for errors and correct them.
3. Telephone manners and voice.
4. Library circulation procedures

Statement Clerk, Security Pacific Bank:
1. Technical knowledge
2. Customer Service
3. Ability to communicate

Survey Worker, Youth Programs, Mayor's Office:
1. How to work as part of a larger cooperative effort
2. How the City's Youth Service System works
3. How an information and referral directory is compiled
4. Filing skills: editing, cross-referencing
5. Resources: youth services and programs

Architectural Drafting Assistant, U.S. Customs Service:
1. Application of drafting skills
2. Different styles of architecture
3. Research procedures
4. Presentation of ideas in meetings
5. Securing approval of plans from management personnel

Cashier and General Office Worker, Granada Datsun
1. How to handle the telephone correctly
2. How to cashier correctly
3. How to make bank deposits
4. How to close out repair orders

Special Education Aide, Lokrantz School:
1. To relate to handicapped children
2. To assume responsibility
3. To get along (relate) with adults
4. To prepare for a game--a story, etc.
5. Be aware of safety factors in school

Junior Accountant, Weston Hydraulics:
1. General accounting organizational structure
2. Overall department responsibilities
3. Detail experience in various accounting functions
4. General exposure to other, main accounting functions
5. Relation of Accounting Department in company structure

Physical Therapy Aide, McDonnell Street School:
1. Feeding techniques for children
2. Removal and putting on of braces
3. Games, activities with the children
4. Understanding some medical terms
5. Understanding some diseases and conditions

Electrocardiogram Technician, Veterans Hospital:
1. How to take EKG's and to mount them
2. A little general knowledge on the routine of the hospital
3. How to relate to a patient in many types of situations and conditions

Accounting Clerk, Farmers Insurance:
1. Basic idea of accounts receivable

Data Processing, American Cyanamid:
"This is a tough world, and if a person wants to keep a job they had better show up for it."

Engineering, Dickerson/Gladstone Associates:
"Same as 4a."
"1) An opportunity to interface their school experience with professionals.
2) An opportunity to apply their academic studies to real problems and situations."

Veterinarian Aide, Chatoak Pet Clinic:
No response

Dental Assistant, Riley Dental Corporation:
1. Self-confidence
2. Poise
3. Self respect
4. Good manners
5. Ability to work with others

Microbiological Aids, Sepulveda Veterans Hospital:
1. To use various equipment--Metler balance, centrifuge, autoclave
2. To learn to pipet accurately
3. To use aseptic technique
4. To make media

Editorial Assistant, U.S. Army Engineering District:
1. How to make logical arrangements
2. How to be precise
3. Correct form and layout for various reports
4. How to prepare tables
5. What to check for on plates and graphs

Shop Worker, Northwest Fruit Company:
Basic intelligence and a willingness to learn

Travel Consultant, Travelwise:
1. Answer telephone properly
2. To learn the airline guides for fares and routings
3. Write airline tickets
4. To make out travel itinerary

Teller Trainee, Lloyd's Bank:
1. Fundamentals of banking
2. Customer relations
3. Responsibility for assets

Accounting Clerk, Farmers Insurance:
1. Knowledge of checks
2. Balancing adding machine tapes
3. Use of an adding machine

Animal Caretaker, Pettigrew Science Center:
1. Feeding of various animals
2. Health conditions of various animals
3. Methods of caring for animals
4. Planning for the care of animals (feed orders, changes in cages, etc.)
5. Responsibility

Electron Microscope Aide, Sepulveda Veterans Hospital:
1. Darkroom techniques
2. Preparation of tissue for microscope techniques
3. Observing tissue in electron microscope--practical application of biological knowledge
4. How to operate specialized laboratory apparatus and instruments

Finance Assistant, Atlantic Ritchfield:
1. Business mannerisms
2. Follow through

8. To what extent do you think such a work experience program will be generally helpful in preparing a student to assume a full time job in the world of work?

Very high

Veterans Hospital (Electron Microscope Aide)
Pettigrew Science Center (Animal Caretaker)
Riley Dental Corporation (Dental Assistant)
Dickerson/Gladstone Associates (Engineering)
Granada Datsun (Cashier)
Mayor's Office (Editing Clerk)

Fairly high

Farmers Insurance (Cash Receipts Clerk)
Lloyd's Bank (Teller Trainee)
U.S. Army Engineering District (Editorial Assistant)
Farmers Insurance (Accounting Clerk)
Veterans Hospital (EKG Technician)
McDonnell Street School (Physical Therapy Aide)
Lokrantz School (Special Education Aide)
U.S. Customs (Architectural Drafting Assistant)
Mayor's Office (Survey Worker)
Blue Cross (Library Aide)

Somewhat high

Atlantic Ritchfield (Finance Assistant)
Travelwise (Travel Consultant)
Northwest Fruit Company (Shop Worker)
Veterans Hospital (Microbiological Aide)
Chatoak Pet Clinic (Veterinarian Aide)
American Cyanamid (Data Processing)
Weston Hydraulics (Junior Accountant)
L.A. Convention and Visitors Bureau (Research Assistant)

Low

No response

Security Pacific Bank (Statement Clerk)

9. To what extent do you think such a work experience program will be generally helpful in preparing a student to assume a full time job in this specific job placement?

Very high
- Veterans Hospital (Electron Microscope Aide)
- Riley Dental Corporation (Dental Assistant)
- Dickerson/Gladstone Associates (Engineering)
- McDonnell Street School (Physical Therapy Aide)
- Granada Datsun (Cashier)

Somewhat in favor
- Atlantic Ritchfield (Finance Assistant)

Not in favor

No response
- Chatoak Pet Clinic (Veterinarian Aide)[3]
- Pettigrew Science Center (Animal Caretaker)

[1] "The only problems involved are:
1. I often don't have a lot of time to spend in observing the student.
2. As you have undoubtedly noticed, it is often difficult for me to compute extra paperwork--I have loads of my own."

[2] "With better selection"

[3] "Not applicable"

12. This item has not been considered because the heading was left off and only a few respondents had the item in their questionnaire.

13. What is your main reason for agreeing to participate in this career experience program?

"Need for help in the creation of house organ. Offer the student opportunity to work in large organization." (Jr. Administrative Assistant, Youth Programs, Mayor's Office).

"A wish to contribute to the educational process by offering a first hand look at a field which probably seems attractive to certain students. Expected a student who had been attracted to PR/Advertising and one eager to learn as much as possible during the brief test period." (Promotion Director, L.A. Convention and Visitors Bureau, Inc.)

"Hoping to help increase the knowledge of library operations and help the students avail themselves of this knowledge." (Librarian, Blue Cross).

"To help the student gain self-confidence and to be able to learn the "working world," and still gain on the job training." (Assistant Manager, Bank).

"My main readon by participation was because this program potentially extends existing staff and provides an opportunity for students to gain firsthand knowledge of governmental processes." (Junior Administrative Assistant, Youth Programs, Mayor's Office).

"This agreement was made in order to provide the student an opportunity for exposure to the day-to-day work of an organization staffed with employees with training similar to that of the student's. It is hopeful that this exposure will encourage the student to pursue the architectural design career field in college." (Branch Chief, U.S. Customs Service).

"We felt it would be a good program to participate in."

(General Accountant, Atlantic Ritchfield Co.)

14. To what extent will the job in which the student is being placed be a modification of an already existing position within the company?

Job will be greatly modified.
L.A. Convention and Visitors Bureau (Research Assistant)

Job will be somewhat modified.
Mayor's Office (Survey Worker)
Security Pacific Bank (Statement Clerk)
Blue Cross (Library Aide)

Job will not be modified at all.
Atlantic Ritchfield (Finance Assistant)
U.S. Customs (Architectural Drafting Assistant)
Mayor's Office (Editing Clerk)

15. If the job will be modified to some extent, please indicate in what ways.

"The student's tasks have been scaled down to meet the short hours available and the lack of daily continuity." (Jr. Admin. Assist., Youth Programs, Mayor's Office). SM

"Karen has already gained a lot of technical knowledge but still needs some supervision." (Assistant Manager, Bank) SM

"By giving access to work that can be accomplished satisfactorily only and holding back on the more frustrating jobs." (Librarian, Blue Cross). SM

"Research for this particular publication has not been done." (Promotion Director, L.A. Convention and Visitors Bureau). GM

"Presently such a position does not exist." (Jr. Administrative Assistant, Youth Programs, Mayor's Office). NM

"N/A." (General Accountant, Atlantic Ritchfield Co.) NM

18. Which of the following statements best describes the degree of supervision that the student will receive during this career experience program?

Student will be given direction and close supervision while working on his tasks.

Atlantic Ritchfield (Finance Assistant)
Security Pacific Bank (Statement Clerk)

Student will be expected to work on tasks on his own, but someone will be close at hand if he has questions or need help.

L.A. Convention and Visitors Bureau (Research Assistant)
Blue Cross (Library Aide)
Mayor's Office (Editing Clerk)
Mayor's Office (Survey Worker)
U.S. Customs (Architectural Drafting Assistant)

Student will work independently until a task is completed.

17. When a job task is completed by the student, which of the following will occur?

All seven responded "The student will be told how well he did on the completed assignment (and what improvements, if any, are needed) before being given another task."

18. Does your company have a training program for new employees?

Yes

Mayor's Office (Survey Worker):
"The normal training program includes close supervision, weekly staff meetings and staff development sessions."

Security Pacific Bank (Statement Clerk):
"Workshops."

Blue Cross (Library Aide):
"Consult Paula Cowan on this one."

No

Atlantic Ritchfield (Finance Assistant)
L.A. Convention and Visitors Bureau (Research Assistant)
Mayor's Office (Editing Clerk)
U.S. Customs (Architectural Drafting Assistant)

If "yes," will the student(s) in this career experience program participate in your company's training program?
All said "yes."
Blue Cross Librarian specified "only the library program."

19. Do you have any reservations about your company's participation in this career experience program?

Yes

L.A. Convention and Visitors Bureau (Research Assistant):
"Stress a careful screening of candidate. It is a waste of the student's time--and mine--if he is unmotivated to pursue this field or some related aspect."

Mayor's Office (Survey Worker):
"It is not clear at this point what kinds of preparation the student has received prior to placement."

Mayor's Office (Editing Clerk):
"The actual preparation of a student for this program must be thorough. The needs and requests of the City must be evaluated and be filled as closely as possible in order to help the City and the student."

No

Atlantic Ritchfield (Finance Assistant)
Blue Cross (Library Aide)
Security Pacific Bank (Statement Clerk)
U.S. Customs (Architectural Drafting Assistant)

IV

EMPLOYER POST TEST DATA

Employer Questionnaire II

1. Indicate with a check mark how helpful you think what the student learned in school was in their work experience program placement.

Very helpful

U.S. Customs (Architectural Drafting Assistant)
Veterans Hospital (Electron Microscope Aide)
Veterans Hospital (EKG Technician)
Miller H.S. (Special Education Aide)
U.S. Customs (Budget Analyst)

Fairly helpful

U.S. Army Engineering District (Editorial Assistant)
Chatoak Pet Clinic (Vet. Aide)
Litton Data Systems (Scientific Programming Aide)

Somewhat helpful

Lloyd's Bank (Teller Trainee)
Riley Dental Corporation (Dental Assistant)

Not helpful

Farmers Insurance (Cash Receipts Clerk)
Farmers Insurance (Accounting Clerk)

No response

Employer Questionnaire II

1a. Briefly explain how their school learning was helpful (or not helpful) in their work experience placement.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: "Should know how to run a 10-key adding machine."

Editorial Assistant, U.S. Army Engineering District: "Courses in reading comprehension, written composition, grammar, and typing were helpful in this particular work experience placement."

Accounting Clerk, Farmers Insurance: "Unless the student worked in the cafeteria or in the offices, his normal course of studies would not be helpful in this position."

Personnel Clerk, IRS: "No tie-ins of school and work experience. The majority of the work given to the student was not all helpful to the student. For example, student had never typed on an electric typewriter."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Knowledge of technical terms, i.e., metric measures, chemicals etc. enabled him to follow written instructions easily. His biology gave him a headstart in understanding our projects."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "School learning is not particularly helpful in this type of job except in a general way, e.g., reading, writing, learning to get along with others."

Special Education Aide, Miller High School: "Academic background necessary for presenting educational materials."

Veterinarian Aide, Chatoak Pet Clinic: "It takes somewhat more of our time than was anticipated, but it is very helpful to the student. Both students we had did all they could to learn and help us."

Budget Analyst, U.S. Customs: "Very helpful for the projects she was assigned to do, particularly in the budget."

Editing Clerk, Mayor's Office: "Although student did have some journalism classes, she had little practical knowledge."

Survey Worker, Mayor's Office: "The school learning was helpful in that Charlotte grasped very quickly the tasks outlined and performed them efficiently."

Architectural Drafting Assistant, U.S. Customs: "This experience has given the student opportunities to apply academic knowledge and skills to practical on-the-job situations."

Professional Resume Assistant, Atlantic Ritchfield: "Unable to answer."

Employer Questionnaire II
Item #1a

Scientific Programming Aide, Litton Data Systems: "English composition a must for documentation of work in programming. Math very useful in certain programming applications at Litton. Physics is also useful as background information. History, government, etc., not directly applicable."

Dental Assistant, Riley Dental Corporation: "General knowledge of medicine. Communicating with people and patients."

Advertising Copywriter, L.A. Convention Bureau: "General discipline, awareness."

Employer Questionnaire II

2. *Indicate with a check mark how helpful you think the student's experiences outside of school were in the student's work experience placement.*

Very helpful
- *Miller H.S. (Special Education Aide)*
- *U.S. Customs (Architectural Drafting Assistant)*

Fairly helpful
- *Chatoak Pet Clinic (Vet. Aide)*
- *Veterans Hospital (Electron Microscope Aide)*
- *Atlantic Ritchfield (Professional Resume Assistant)*

Somewhat helpful
- *Mayor's Office (Editing Clerk)*
- *Farmers Insurance (Accounting Clerk)*
- *U.S. Army Engineering District (Editorial Assistant)*
- *Riley Dental Corporation (Dental Assistant)*
- *Lloyd's Bank (Teller Trainee)*
- *Advertising Copywriter, L.A. Convention Bureau*

Not helpful
- *Veterans Hospital (EKG Technician)*

No response
- *Mayor's Office (Survey Worker)*
- *IRS (Personnel Clerk)*
- *Farmers Insurance (Cash Receipts Clerk) "Not applicable"*
- *Litton Data Systems (Scientific Programming Aide)*

No page for
- *U.S. Customs (Budget Analyst)*

Employer Questionnaire II

2a. Briefly explain how their experiences outside of school were helpful (or not helpful) in their work experience placement.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Reading a variety of publications and books outside of school was helpful in this particular work experience placement."

Accounting Clerk, Farmers Insurance: "This again would depend upon that particular student's outside occupation(s). If a clerical position had been assumed, it could be beneficial in this position."

Personnel Clerk, IRS: "Unaware of student's experiences outside of school."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Very neat --good at keeping the lab clean which is very important in an EM laboratory. His mechanical ability allowed him to operate and maintain equipment (especially darkroom) without supervision."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Poorly worded--do you mean extracurricular activities? If so not helpful. If you mean the work training he is getting here--it is very helpful in training for an EKG Tech. job."

Special Education Aide, Miller High School: "Ability to relate to our students. Also helpful to our students in finding acceptance from people outside of their school."

Veterinarian Aide, Chatoak Pet Clinic: "I believe this will give an insight as to her proposed vocation."

Budget Analyst, U.S. Customs: No page for.

Editing Clerk, Mayor's Office: "While student was adaptable to change, she had no real experience out of school relevant to responsibilities of job."

Survey Worker, Mayor's Office: "Charlotte was personable, able to get along with others in the office and coped with the working situation very well."

Architectural Drafting Assistant, U.S. Customs: "The student's experiences in interpersonal relationships have helped him in his dealing with members of the space and communications staff--as well as other staff agencies of our office."

Professional Resume Assistant, Atlantic Ritchfield: "N/A"

Scientific Programming Aide, Litton Data Systems: No response.

Employer Questionnaire II
Item #2a

Dental Assistant, Riley Dental Corporation: "Same as 1a. "General knowledge of medicine. Communicating with people and patients."

Advertising Copywriter, L.A. Convention Bureau: "While advertising/marketing is specialized, his general awareness was good."

Employer Questionnaire II

3. Based on the student's performance, how likely is it that he or she could get a full time job in this area upon completion of school?

With your company

Very likely
- Vets Hosp. (EM Aide)[1]
- IRS (Personnel Clk.)
- Riley Dental (Dent. Asst.)
- U.S. Customs (Arch. Draft.)
- Atlantic Ritchfield (PRA)
- Litton (Sci . Prog. Aide)

Fairly likely
- Mayor's Off. (Survey)
- Chatoak (Vet. Aide)
- Miller H.S. (SE Aide)
- Farmers (Acctg. Clk.)
- Farmers (Cash Rcts. Clk.)

Somewhat likely
- Vets Hosp. (EKG Techn.)
- U.S. Army (Edit. Asst.)
- Lloyd's Bk. (Teller T.)

Not likely
- Mayor's Off. (Edit. Clk.)
- L.A. Conv. Bur. (Ad. CW)

No response

No page for
- U.S. Customs (BA)

With another company

Very likely
- IRS (Personnel Clk.)
- U.S. Customs (Arch. Dr.)
- Atlantic R. (PRA)

Fairly likely
- Vets Hosp. (EKG Tech.)
- Vets Hosp. (EM Aide)[2]
- Farmers (Acctg. Clk.)
- Farmers (CRC)

Somewhat likely
- Mayor's Off. (Survey)
- U.S. Army (Edit. Assist.)
- Riley Dent. (Dent. Assist.)
- Lloyd's Bk. (Teller T.)

Not likely
- Mayor's Off. (Edit. Clk.)[2]
- Litton (Sci. Prog. Aide)
- L.A. Conv. Bur. (Ad. CW)

No response
- Chatoak (Vet. Aide)
- Miller H.S. (SE Aide)

No page for
- U.S. Customs (BA)

[1] "Full time lab aides are sometimes an extravagance."

[2] "City does not employ editing clerks."

4. To what extent do you think the student's work experience placement was enjoyable and satisfying work?

Very enjoyable
- Veterans Hospital (EKG Technician)
- Riley Dental Corporation (Dental Assistant)
- U.S. Customs (Architectural Drafting Assistant)
- Atlantic Ritchfield (Professional Resume Assistant)

Fairly enjoyable
- Mayor's Office (Survey Worker)
- Chatoak Pet Clinic (Veterinarian Aide)
- Miller High School (Special Education Aide)
- Veterans Hospital (Electron Microscope Aide)
- Farmers Insurance (Cash Receipts Clerk)
- Litton Data Systems (Scientific Programming Aide)

Somewhat enjoyable
- IRS (Personnel Clerk)
- U.S. Army Engineering District (Editorial Assistant)
- Lloyd's Bank (Teller Trainee)
- Advertising Copywriter, L.A. Convention Bureau

Not very enjoyable
- Mayor's Office (Editing Clerk)
- Farmers Insurance (Accounting Clerk)

No response

No page for
- U.S. Customs (Budget Analyst)

4a. Briefly explain the ways in which the student derived satisfaction and enjoyment from their work experience.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "I assumed that the student derived satisfaction and enjoyment from exercising her skills learned in school on a professional level and from having the experience of being in a professional setting and observing how the business world functions."

Accounting Clerk, Farmers Insurance: "This student may have enjoyed the overall concept of the insurance business as a whole. But I don't feel that one particular job was enjoyable for him in particular."

Personnel Clerk, IRS: "The student was a very good mixer. She didn't shy easily. Her meet and deal qualities were food. I think she enjoyed the surroundings of the Office personnel and the satisfaction of working at ease in a very friendly office atmosphere."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Darkroom experience is the most enjoyable--unfortunately there didn't seem to be enough time to have him learn all darkroom techniques --e.g., film developing."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "It gave him some experience in relating to patients and operating in a hospital routine, which is satisfying since the student plans to be a doctor."

Special Education Aide, Miller High School: "The satisfaction of working on a one-to-one basis with the handicapped student and the friendships that develop from this relationship."

Veterinarian Aide, Chatoak Pet Clinic: "The endeavor to learn more."

Budget Analyst, U.S. Customs: No page for.

Editing Clerk, Mayor's Office: "She stated she learned about City Hall and liked the people."

Survey Worker, Mayor's Office: "Charlotte was treated as an adult, and this was pleasing to her; she learned about Youth Programs and Services, and began to understand how her tasks fit into the larger picture of the City as the program ended."

Architectural Drafting Assistant, U.S. Customs: "When the student realized that his drawings would be incorporated in construction plans--and actually used to build U.S. Customs facilities; he then began to appreciate the value of his assignments and accomplishments."

Professional Resume Assistant, Atlantic Ritchfield: "N/A"

Scientific Programming Aide, Litton Data Systems: "1) Taking on adult-level responsibilities in a highly technical industry. 2) Producing computer programs which have uses other than for obtaining a grade from an instructor."

Dental Assistant, Riley Dental Corporation: "Enjoyed office personnel. She enjoyed the jobs required; there interesting and different."

Advertising Copywriter, L.A. Convention Bureau: "Started projects, saw progress and (soon) will see a net result in printed form."

4b. Briefly explain what kinds of things were dissatisfying to the student in their work experience placement.

Teller Trainee, Lloyd's Bank: "Money."

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering: "Not enough time was allowed for the student to fully participate in this program."

Accounting Clerk, Farmers Insurance: "Ron has a very inquisitive nature and is very intelligent. A student with his potential would normally find this position rather mundane."

Personnel Clerk, IRS: "I believe that Helene would have been more satisfied if she would have been able to apply her school experience to the work that she performed on the job."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Routine jobs; labeling print--busy paper work tedious--sorting, storing, filing."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Seeing very sick patients was somewhat upsetting to the student."

Special Education Aide, Miller High School: "The inability to follow through an assignment in class due to being here only 2 or 3 times weekly."

Veterinarian Aide, Chatoak Pet Clinic: No response.

Budget Analyst, U.S. Customs: No page for.

Editing Clerk, Mayor's Office: "Student had not been put into placement she requested."

Survey Worker, Mayor's Office: "The work she performed was quite detailed and frequently unexciting. She felt the need to be doing more 'people contact' work and in the beginning was unsure of how her tasks related to our office. In addition, her work was unable to be completed within the time-frame of the placement, and this may have frustrated her."

Architectural Drafting Assistant, U.S. Customs: "Unexpected changes in priorities, which necessitated changes in project assignments."

Professional Resume Assistant, Atlantic Ritchfield: "Not enough challenge."

Scientific Programming Aide, Litton Data Systems: "Due to being present only 25% of the business hours, the types of assignments the student are somewhat limited. The student cannot be given responsibility for the development of a computer program which must be delivered according to a schedule."

Dental Assistant, Riley Dental Corporation: "Nothing."

Employer Questionnaire II
Item #4b

Advertising Copywriter, L.A. Convention Bureau: "Conflict in schedule--he was due here at 2 PM yet had a class at that time. Therefore, I had..."

5. To what extent were you satisfied with the student's work?

Very satisfied
- U.S. Customs (Architectural Drafting Assistant)
- Riley Dental Corporation (Dental Assistant)
- IRS (Personnel Clerk)
- Veterans Hospital (Electron Microscope Aide)
- Veterans Hospital (EKG Technician)
- Miller H.S. (Special Education Aide)
- Chatoak Pet Clinic (Veterinarian Aide)
- Mayor's Office (Editing Clerk)
- Mayor's Office (Survey Worker)
- Atlantic Ritchfield (Professional Resume Assistant)
- L.A. Convention Bureau (Advertising Copywriter)

Fairly satisfied
- Farmers Insurance (Cash Receipts Clerk)
- U.S. Army Engineering District (Editorial Assistant)
- Litton Data Systems (Scientific Programming Assistant)

Somewhat satisfied
- Lloyd's Bank (Teller Trainee)
- Farmers Insurance (Accounting Clerk)

Not very satisfied

No response

No page for
- U.S. Customs (Budget Analyst)

5a. Briefly explain the kinds of things that satisfied you with the student's work.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "A command of English grammar, punctuation, spelling, reading comprehension, written composition, and typing ability."

Accounting Clerk, Farmers Insurance: "1. He is a very rapid learner. 2. He is inquisitive. 3. He was punctual."

Personnel Clerk, IRS: "Helene is a fast worker. She receives instructions very well and carries them out accurately and completely. She works independently. She is a likable person to work with."

Electron Microscope Aide, Sepulveda Veterans Hospital: "He was very helpful in taking care of darkroom work which is very time consumingfor me. Thus, I could take care of other more technical tasks."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "He was careful and responsible in taking EKGs, was cheerful and pleasant to work with and learned quickly."

Special Education Aide, Miller High School: "Initiative, dependability."

Veterinarian Aide, Chatoak Pet Clinic: "Willingness."

Budget Analyst, U.S. Customs: No page for.

Editing Clerk, Mayor's Office: "Due to some problems, student was asked to handle a number of unrelated tasks. She was adaptable and did her work cheerfully."

Survey Worker, Mayor's Office: "Charlotte is bright, conscientious and able to work on her own."

Architectural Drafting Assistant, U.S. Customs: "Shaumon's attention to details and his desire to excel (along with his natural talent)."

Professional Resume Assistant, Atlantic Ritchfield: "Cooperative, conscientious."

Scientific Programming Aide, Litton Data Systems: "Undertaking and completing mutually agreed-on assignments, delivered and documented when scheduled to be, and requiring minimal supervision to carry out the work."

Dental Assistant, Riley Dental Corporation: "Her dependability. Attitude towards patients. Efficient."

Advertising Copywriter, L.A. Convention Bureau: "Followed directions well, compiled information from several (actually 5) sources and kept it all straight."

5b. Briefly explain the kinds of things that dissatisfied you with the student's work (list at least four things).

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "None."

Accounting Clerk, Farmers Insurance: "1. He was for the most part bored. 2. I felt this position was beneath his intellect. 3. He should have (him in particular) been in a different position. 4. I feel that student should have been picked from the average or below average level. One that would have to work to get through school would have been helped far more than one with a fairly secure position in society."

Personnel Clerk, IRS: "1. Student's tardiness (which I understand was due to bus schedule and special bell schedule). 2. Student's lack of complete motivation. 3. Not too interested in the work assignments. This could be that student is not very interested in the clerical field."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Honestly nothing--leaving after 4 hours--not staying full day. Sometimes a project cannot be finished within this time."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Nothing."

Special Education Aide, Miller High School: "We wish they had some more time available for us."

Veterinarian Aide, Chatoak Pet Clinic: "Time schedule--this varied from day to day."

Budget Analyst, U.S. Customs: No page for.

Editing Clerk, Mayor's Office: "The student had not been evaluated to see if she fit the requirements for placement in this particular job."

Survey Worker, Mayor's Office: "1. She was frequently faced with a conflict between her schoolwork and her placement, causing her to be absent on two occasions. 2. The program was too short to assess completely what Charlotte had and had not done. 3. It was apparent upon her arrival that she had not been apprised of the work which she was to do."

Architectural Drafting Assistant, U.S. Customs: "None."

Professional Resume Assistant, Atlantic Ritchfield: "N/A"

Scientific Programming Aide (Litton Data Systems): "1. Unreliable attendance. 2. Requirement for constant direction and supervision. 3. Doing work other than that directed. 4. Failing to produce on schedule. 5. Failing to adequately document work."

Dental Assistant, Riley Dental Corporation: "Nothing."

Employer Questionnaire II
Item #5b

Advertising Copywriter, L.A. Convention Bureau: "N/A."

6. What kinds of skills and knowledge do you believe the student learned in the work experience placement?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance:
S 10-key adding machine

Editorial Assistant, U.S. Army Engineering District:
S Additional written composition
S Additional reading comprehension
S Addition problem solving ability
S Improved typing ability
K How to make logical arrangements
K How to be precise
K Correct form and layout for various reports
K How to prepare tables

Accounting Clerk, Farmers Insurance:
S Applying cash
S Reading computer cards
K Relating to people in a business atmosphere

Personnel Clerk, IRS:
S Electric typewriter
S Proper telephone technique
K Branch secretary's duties
K Preparing documents for briefing session

Electron Microscope Aide, Sepulveda Veterans Hospital:
S Printing micrographs
S Complete darkroom processing of negative for our data
S Making solutions for both darkroom and tissue processing
S Maintenance of out experiment records
K More familiar with biological systems and recognizing what micrographs were
K Tissue preparation techniques--the whole EM procedure
K What darkroom work entails

Electrocardiograph Technician, Sepulveda Veterans Hospital:
S Take an EKG
S Mount an EKG
S Operate in a hospital setting
S Answer the office phone

Special Education Aide, Miller High School:
S Tutoring
S Use of educational equipment

Veterinarian Aide, Chatoak Pet Clinic:
S Uses of library
S Other sources of reference material
S Insight into veterinary medicine
K Expand their background

Budget Analyst, U.S. Customs: No page for

Editing Clerk, Mayor's Office:
- S Organizational skills
- K Familiarization with governmental process

Survey Worker, Mayor's Office:
- S Research
- S Cross-referencing, editing
- S Telephone survey skills
- K Knowledge of the machinations of the Youth Service System
- K How a Youth Services Directory is compiled
- K A general knowledge of existing resource directories
- K A specific knowledge of existing youth services and programs

Architectural Drafting Assistant, U.S. Customs:
- S Preparing drawings for reproduction
- S Use of the appropriate grades of pencils, in lieu of ink, in drawing architectural plans
- S Researching structural drawings prior to preparing remodeling plans
- S Scaling construction drawings--as required
- K Preconstruction research procedures
- K Group participation in design conferences for developing designs for facilities
- K Procedures for presenting plans and ideas to managers
- K Knowledge of basic architectural materials

Professional Resume Assistant, Atlantic Ritchfield:
- S Filing

Scientific Programming Aide, Litton Data Systems:
- S Ability to learn by reading manuals
- S Ability to operate a keypunch
- S Ability to write in an understandable manner
- S How to properly design and document a program
- S How to debug and test a program
- K Knowledge of how a computer works
- K Recognize a well-designed versus a poorly designed program

Dental Assistant, Riley Dental Corporation:
- S Develop xrays
- S Assist doctor
- S Pour impressions
- K Booking appointments
- K Dentistry knowledge (general)

Advertising Copywriter, L.A. Convention Bureau:
- K Compiling a "master" from several sources
- K Awareness of L.A. County diversity
- K What appeals to a potential visitor

7. To what extent do you think such a work experience program is generally helpful in preparing a student to assume a fulltime job in the world of work?

Very high
- Miller H.S. (Special Education Aide)
- IRS (Personnel Clerk)
- Farmers Insurance (Accounting Clerk)
- U.S. Customs (Architectural Drafting Assistant)
- Atlantic Ritchfield (Professional Resume Assistant)

Fairly high
- Mayor's Office (Editing Clerk)

Fairly favorable
- Farmers Insurance (Cash Receipts Clerk)
- Mayor's Office (Editing Clerk)
- Atlantic Ritchfield (Professional Resume Assistant)

Somewhat in favor
- Riley Dental Corporation (Dental Assistant)
- L.A. Convention Bureau (Advertising Copywriter)[1]

Not in favor

No response

[1]"Careful screening to select one who wants to be in this field."

11. Please list the kinds of things that could be changed in the work experience program that would make it more valuable for your company and the participating student.

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District:
1. More time allowed for the student to fully participate in this program.
2. Only select students that have an interest in the particular work experience, i.e., those planning to enter that field.

Accounting Clerk, Farmers Insurance:
1. The environmental background of the student.
2. The family background of the student.
3. The necessity of the student to work while going to school.
4. The student should not necessarily be picked from "the honors group" of his class.
5. Unless the student is specifically being chosen to train in the supervisory level, an average, rather than an above average, student would seem more acceptable.

Personnel Clerk, IRS:
1. More working days.
2. Background knowledgr on student's field of study for arranging a better work plan.
3. More contact from the work experience program before the program actually starts.
4. Preparing a brief personal resume on student so that supervisor has a general knowledge of the student.
5. More interest from all concerned in the program.

Electron Microscope Aide, Sepulveda Veterans Hospital:
1. If the program would last longer, i.e., a whole school year, more types of work can be trained for and more work done after training.

Electrocardiograph Technician, Sepulveda Veterans Hospital: No response.

Special Education Aide, Miller High School:
1. The first reaction of the students participating in the work program to our school was shock! I think they need a better understanding that this is a handicapped children's school and that they will be confronted with nearly 200 students with a variety of disabilities.

Veterinarian Aide, Chatoak Pet Clinic:
1. Set up program.
2. Regular schedule.
3. Testing program.
4. Students' evaluation to us.
5. Critique.

Budget Analyst, U.S. Customs:
1. Start earlier in the academic year. We need more notice to set up such a program.
2. I would like to have the student for a longer period of time.
3. It would be helpful if the student could travel.
4. It would be helpful to know more about the student's school outside activities.

Editing Clerk, Mayor's Office:
1. Student should be closely consulted regarding placement.
2. Placement officers should evaluate carefully qualifications of students to fill positions.
3. Ongoing counseling with student is necessary.
4. Ongoing consultation with placement site is necessary.

Survey Worker, Mayor's Office:
1. Six weeks is too short a time: the program should at least be a semester.
2. Specific time and credits must be given by the school for the program.
3. The placement supervisors and the high school counselors should meet in advance with the student.
4. A more specific training program should be planned.
5. The placemant should be given the weight of a regular class, but made flexible to the company's time needs.

Architectural Drafting Assistant, U.S. Customs:
1. The student should provide a minimum of 3 hours of service to the agency...thereby, allowing us more time to work with him.

Professional Resume Assistant, Atlantic Ritchfield:
1. Better communication between counselor and student in explaining exact nature of job.

Scientific Programming Aide, Litton Data Systems:
1. More lead time in the placing of the student.
2. An extra course for students on what to expect in companies and work environments.

Dental Assistant, Riley Dental Corporation:
Nothing

Advertising Copywriter, L.A. Convention Bureau:
1. Careful screening to select one who wants to be in this field.
2. Marketing/advertising is an outgoing field--need an extrovert-type of student who asks questions, probes, discusses.

12. What type of work atmosphere best describes your company?

Formal

- Farmers Insurance
- Lloyd's Bank
- U.S. Customs
- U.S. Army Engineering District
- Farmers Insurance
- IRS
- U.S. Customs2
- Mayor's Office
- Mayor's Office

- L.A. Convention Bureau (Advertising Copywriter)

No response

Other
- U.S. Customs (Budget Analyst)
  "We really had no existing job of this type"

IRS (Personnel): "Lesser responsibilities, such as technical information to operating officials which was referred to other employees. Typing duties were minimum."

Veterans Hospital (EKG Technician): "We did not send the student out on the wards to take EKG's by himself."

Miller High School (Special Education Aide): "Physical needs of students not involved--feeding, toileting, seizure care, etc."

Mayor's Office (Editing Clerk): "Editing Clerk, no job exists."

Mayor's Office (Survey Worker): "Job was drastically simplified to meet six-week program time."

U.S. Customs (Architectural Drafting Assistant): "The operations of the branch are subdivided into several areas, i.e., telecommunications systems design and management, space utilization and management, budget review, and construction management. Shaumon was exposed only to the drafting segment of our operations."

Litton Data Systems (Scientific Programming Aide): "1. Simplified. 2. Adjusted to allow work on a parttime basis."

Dental Assistant, Riley Dental Corporation: Yes
"It isn't worth her time, unless paid."

If "yes," who do you feel should have been responsible for providing student salary funds? (If you check more than one, please circle the source that you feel should have been primarily responsible for providing the funds.)

Employer
Veterinarian Aide, Chatoak Pet Clinic[2]
Architectural Drafting Assistant, U.S. Customs
*Scientific Programming Aide, Litton Data Systems
Dental Assistant, Riley Dental Corporation

School District
Survey Worker, Mayor's Office[3]
Scientific Programming Aide, Litton Data Systems

Community

Government grant
Editorial Assistant, U.S. Army Engineering District
Electron Microscope Aide, Sepulveda Veterans Hospital
Editing Clerk, Mayor's Office
*Architectural Drafting Assistant, U.S. Customs
Scientific Programming Aide, Litton Data Systems

Private foundation

Other (describe)

[1]"We operate partially on government grant."

[2]"...or other...insurance would limit us."

[3]"as work study."

16. Do you feel that the students should have been paid for their participation in this career experience program?

Teller Trainee, Lloyd's Bank: No

Cash Receipts Clerk, Farmers Insurance: No

Editorial Assistant, U.S. Army Engineering District: Yes
"If the student had been paid, her interest and participation would have been more motivated and sincere. Also, being paid would have added a more realistic aspect to the program."

Accounting Clerk, Farmers Insurance: No
"Should they get paid for going to school?"

Personnel Clerk, IRS: No
"Even though the student receives experience, he should be paid for transportation. Otherwise job should be regarded as classroom training and one grade credit should be allowed."

Electron Microscope Aide, Sepulveda Veterans Hospital: Yes
"He did work for us that we normally have to include in our workload. Therefore, since we would get paid for it why shouldn't he?"

Electrocardiograph Technician, Sepulveda Veterans Hospital: No
"Because it is a government hospital, governed by civil service, there is no way payment could be made on a temporary basis."

Special Education Aide, Miller High School: No
"Credit given as is other school work."

Veterinarian Aide, Chatoak Pet Clinic: No response
"If this program continues we sould set a formal program and utilize some of our employees to train them before they do actual work. Salary could be worked out for actual work."

Budget Analyst, U.S. Customs: No
"I think the experience was sufficient enough. After all, the students are not experienced applicants."

Editing Clerk, Mayor's Office: Yes
"Provides for more incentive."

Survey Worker, Mayor's Office: Yes
"Yes, because it's a job and that's how it is in the real world."

Architectural Drafting Assistant, U.S. Customs: Yes
"Even though this was an educational experience, whenever the student leaves the classroom for the job market, he(she) should be paid as an employee - parttime."

Professional Resume Assistant, Atlantic Ritchfield: No
"Not enough time contributed by the student."

Scientific Programming Aide, Litton Data Systems: Yes
"Minimum wage seems fair."

Dental Assistant, Riley Dental Corporation: Yes
"It isn't worth her time, unless paid."

Advertising Copywriter, L.A. Convention Bureau: No
"Since I had no hand in the selection process, I did not, I feel, get the best prospect. Further, if a business has to budget monies, the school system will have fewer takers in the community."

17. Has a school coordinator from a participating school visited your company in connection with this career experience program?

Yes

Accounting Clerk, Farmers Insurance
Special Education Aide, Miller H.S.
Veterinarian Aide, Chatoak Pet Clinic
"Had a interview"
Architectural Drafting Assistant, U.S. Customs
"Shaumon's overall performance and the agency's acceptance of him as a team associate."
Scientific Programming Aide, Litton Data Systems
"Areas in the company where students could be placed. Possible students who had education that could be used in our company."
Advertising Copywriter, L.A. Convention Bureau

19. *Which of the following statements best describes the degree of supervision that the student received during the career experience program?*

Student was given direction and close supervision while working on his tasks.

Teller Trainee, Lloyd's Bank
Editorial Assistant, U.S. Army Engineering District
Accounting Clerk, Farmers Insurance

Student was expected to work on tasks on his own, but someone was close at hand if he had questions or needed help.

Cash Receipts Clerk, Farmers Insurance
Personnel Clerk, IRS
Electron Microscope Aide, Sepulveda Veterans Hospital
Electrocardiograph Technician, Sepulveda Veterans Hospital
Special Education Aide, Miller H.S.
Veterinarian Aide, Chatoak Pet Clinic
Budget Analyst, U.S. Customs
Editing Clerk, Mayor's Office
Survey Worker, Mayor's Office
Architectural Drafting Assistant, U.S. Customs
Professional Resume Assistant, Atlantic Ritchfield
Scientific Programming Aide, Litton Data Systems
Dental Assistant, Riley Dental Corporation
Advertising Copywriter, L.A. Convention Bureau

Student worked independently until a task was completed.

20. When a job task was completed by the student, which of the following occurred?

The student handed in the work and then was assigned another task.
Editing Clerk, Mayor's Office
Professional Resume Assistant, Atlantic Ritchfield

The student was told how well he did on the completed assignment (and what improvements, if any, were needed) before being given another task.

All others.

No response
Cash Receipts Clerk, Farmers Insurance
Special Education, Miller H.S.
Veterinarian Aide, Chatoak Pet Clinic

21. Did your company provide information about the career experience program to others outside the company?

Yes

Personnel Clerk, IRS

No

Teller Trainee, Lloyd's Bank
Electron Microscope Aide, Sepulveda Veterans Hospital
Electrocardiograph Technician, Sepulveda Veterans Hospital
Veterinarian Aide, Chatsock Pet Clinic
Editing Clerk, Mayor's Office

Electrocardiograph Technician, Sepulveda Veterans Hospital
Architectural Drafting Assistant, U.S. Customs
Dental Assistant, Riley Dental Corporation

Not sure

Veterinarian Aide, Chatoak Pet Clinic
Professional Resume Assistant, Atlantic Ritchfield

No response

28. *If you could do it over again, would you have chosen to participate in this program?*

Teller Trainee, Lloyd's Bank: Yes.

Cash Receipts Clerk, Farmers Insurance: It depends. "If the hours the student is here could be rotated--AM some days, PM on others."

Editorial Assistant, U.S. Army Engineering District: It depends. "The student sent to us is interested in medicine, not writing and editing, the work experience assignment. Therefore, I would only choose to participate in this program again if the student assigned is interested in writing and/or editing."

Accounting Clerk, Farmers Insurance: Yes. It depends. "If the student was one that really needed the experience to get a job in this field."

Personnel Clerk, IRS: Yes. The program is worthwhile; especially if additional procedures are set forth."

Electron Microscope Aide, Sepulveda Veterans Hospital: Yes. "He was very helpful and it was very pleasant and refreshing to have a student working in our lab."

Electrocardiograph Technician, Sepulveda Veterans Hospital: Yes. "Al was a very pleasant student to work with and was very cooperative. We enjoy teaching students like them. We are always happy to train students for a particular job, especially if he plans to have a job in this area."

Special Education Aide, Miller H.S.: Yes.

Veterinarian Aide, Chatoak Pet Clinic: Yes.

Budget Analyst, U.S. Customs: Yes. "Jo Ann was definitely a big help and worked diligently. I always think it's good to have a firm relationship with the city schools."

Editing Clerk, Mayor's Office: Yes.

Survey Worker, Mayor's Office: It depends. "A closer coordination with the school is an absolute requirement for further participation."

Architectural Drafting Assistant, U.S. Customs: Yes. "Please see Question #34... My associates have been able to spend more time on technical work while Shaumon has handled the job of preparing illustrations and layouts for presentation."

Professional Resume Assistant, Atlantic Ritchfield: Yes.

Scientific Programming Aide, Litton Data Systems: Yes.

Dental Assistant, Riley Dental Corporation: No. "I don't need any more student workers. I currently have a full staff working."

Advertising Copywriter, L.A. Convention Bureau: Yes. "With better screening. This student had little interest in this field."

29. *If you would consider participating again, would you be interested in accepting a larger number of students?*

Teller Trainee, Lloyd's Bank: No.

Cash Receipts Clerk, Farmers Insurance: No. "No room in our dept. for more students."

Editorial Assistant, U.S. Army Engineering District: No. "There are a limited number of positions in this agency that a student could easily adapt to on this basis. Also, there are not enough employees to supervise the students in other areas."

Accounting Clerk, Farmers Insurance: Yes.

Personnel Clerk, IRS: Yes.

Electron Microscope Aide, Veterans Hospital: No.

Electrocardiograph Technician, Sepulveda Veterans Hospital: No. "We can only teach 1 or 2 students at a time due to limited space and time required by the staff."

Special Education Aide, Miller H.S.: Yes.

Veterinarian Aide, Chatoak Pet Clinic: No. "More students would complicate our operation."

Budget Analyst, U.S. Customs: Yes.

Editing Clerk, Mayor's Office: Yes. "Depending on staffing and projects."

Survey Worker, Mayor's Office: Yes. "Not under present circumstances of inadequate working space."

Architectural Drafting Assistant, U.S. Customs: No. "Since the student is working with a small staff of specialists, he is exposed to individual attention by the whole staff...in general during his time at work. If additional students were assigned, some of the individual attention would decrease. Additionally, the production of such a small staff might be adversely affected. This wouldn't be true, possibly, with a large staff."

Professional Resume Assistant, Atlantic Ritchfield: No.

Scientific Programming Aide, Litton Data Systems: Yes.

Dental Assistant, Riley Dental Corporation: I would not consider participating again. "I don't have time to train students."

Advertising Copywriter, L.A. Convention Bureau: No. "One is fine--we have a small staff and I would want a one-to-one experience."

30. What changes would you like to see made in the career experience program to make it a more rewarding and beneficial experience for the company?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Allow more time for the student to participate. Send only students that have an interest in the particular work experience assignments."

Accounting Clerk, Farmers Insurance: "I feel that the company and the student would benefit more if a student was picked because he needed the job more than being picked for his intelligence."

Personnel Clerk, IRS: "Participating schools have a more in-depth interest in the total program and contribute guidance to the participating company."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Spend more time at work."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Do not know of any changes that would make the program better for student or hospital."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: No response.

Budget Analyst, U.S. Customs: "I can't think of any at the present time."

Editing Clerk, Mayor's Office: "Having a student who more closely fits requirements."

Survey Worker, Mayor's Office: "Longer placement, better counseling."

Architectural Drafting Assistant, U.S. Customs: "The program should be limited to 3 months per student. We could be introduced to a new student every 3 months (4 students per year). Students should be in junior or senior year of study."

Professional Resume Assistant, Atlantic Ritchfield: No response.

Scientific Programming Aide, Litton Data Systems: "More time available for the student to gain experience on the job."

Dental Assistant, Riley Dental Corporation: "Nothing."

Advertising Copywriter, L.A. Convention Bureau: "A few days with more hours--so the student could accompany me to the ad agency, visit with a printing house."

30. What changes would you like to see made in the career experience program to make it a more rewarding and beneficial experience for the company?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Allow more time for the student to participate. Send only students that have an interest in the particular work experience assignments."

Accounting Clerk, Farmers Insurance: "I feel that the company and the student would benefit more if a student was picked because he needed the job more than being picked for his intelligence."

Personnel Clerk, IRS: "Participating schools have a more in-depth interest in the total program and contribute guidance to the participating company."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Spend more time at work."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Do not know of any changes that would make the program better for student or hospital."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: No response.

Budget Analyst, U.S. Customs: "I can't think of any at the present time."

Editing Clerk, Mayor's Office: "Having a student who more closely fits requirements."

Survey Worker, Mayor's Office: "Longer placement, better counseling."

Architectural Drafting Assistant, U.S. Customs: "The program should be limited to 3 months per student. We could be introduced to a new student every 3 months (4 students per year). Students should be in junior or senior year of study."

Dental Assistant, Riley Dental Corporation: "Nothing."

Advertising Copywriter, L.A. Convention Bureau: "A few days with more hours--so the student could accompany me to the ad agency, visit with a printing house."

30. What changes would you like to see made in the career experience program to make it a more rewarding and beneficial experience for the student?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Pay the student. Have the student take courses relevant to the work experience assignment."

Accounting Clerk, Farmers Insurance: "I feel that the company and the student would benefit more if a student was picked because he needed the job more than being picked for his intelligence."

Personnel Clerk, IRS: "Allow more working time so that the student can perform duties at a higher level and be able to gain more exposure to the job."

Electron Microscope Aide, Sepulveda Veterans Hospital: No response.

Electrocardiograph Technician, Sepulveda Veterans Hospital: No response.

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: No response.

Budget Analyst, U.S. Customs: "It would be a better experience for the students if they could travel or work over a larger area in L.A."

Editing Clerk, Mayor's Office: "More counseling and support."

Survey Worker, Mayor's Office: "Longer placement, better counseling, 'trial' period, money."

Architectural Drafting Assistant, U.S. Customs: "The student should be prepared to work at least 3 hours consecutively each day that he (she) reports for duty."

Professional Resume Assistant, Atlantic Ritchfield: No response.

Scientific Programming Aide, Litton Data Systems: "More structured preparation in the development of courses or training to prepare the student for a job."

Dental Assistant, Riley Dental Corporation: "Pay."

Advertising Copywriter, L.A. Convention Bureau: "I keep repeating--better screening."

31. If you had to do it over again, what would you do differently concerning the level and types of responsibilities assigned to students and the supervisory techniques used to monitor student performance?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "In my particular case, I would do nothing differently. The student and I did as much as we could in the little time allowed as best we could."

Accounting Clerk, Farmers Insurance: "If the student picked was one in need of a job and interested in my particular position I would train him a lot more specifically on my job."

Personnel Clerk, IRS: "I would get a general knowledge of the student before hand and schedule a work plan in advance applicable to the student's school work, and try to assign work that would help him in his chosen career field."

Electron Microscope Aide, Sepulveda Veterans Hospital: "None--without more time no more tasks could have been given."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "We have taught Al as we have taught other students. He has been very cooperative and quick to learn. We can think of nothing we would do differently."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: "Have reading material for them."

Budget Analyst, U.S. Customs: "Nothing."

Editing Clerk, Mayor's Office: "Responsibilities would be more basic, supervision would need to be tighter."

Survey Worker, Mayor's Office: "I would endeavor to meet with school counselor."

Architectural Drafting Assistant, U.S. Customs: "I would have no change in assignments under this program."

Professional Resume Assistant, Atlantic Ritchfield: "Nothing."

Scientific Programming Aide, Litton Data Systems: "Would not do anything differently."

Dental Assistant, Riley Dental Corporation: "Nothing."

Advertising Copywriter, L.A. Convention Bureau: "The same."

32. How have the regular employees reacted to student participation in the career experience program?

Teller Trainee, Lloyd's Bank: "Favorably."

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "The regular employees were receptive to this idea."

Accounting Clerk, Farmers Insurance: "With interest."

Personnel Clerk, IRS: "Good reaction. Regular employees understand the need for training students for the future."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Very good."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "They have been most happy to have Al, and have felt the program was a good one from most respects."

Special Education Aide, Miller H.S.:"Enthusiastic."

Veterinarian Aide, Chatoak Pet Clinic: "Very well."

Budget Analyst, U.S. Customs: "Very well. The rapport in my office has been good."

Editing Clerk, Mayor's Office: "Favorably."

Survey Worker, Mayor's Office: "Very friendly."

Architectural Drafting Assistant, U.S. Customs: "My associates have expressed their acceptance of this program. The overall reaction has been positive."

Professional Resume Assistant, Atlantic Ritchfield: "Very well."

Scientific Programming Aide, Litton Data Systems: "No problems."

Dental Assistant, Riley Dental Corporation: "Reacted quite well. No modifications were necessary."

Advertising Copywriter, L.A. Convention Bureau: "Fine."

33. Has the exposure of the regular employees to the student affected the employees adversely in any way that you have noticed? (e.g., less productive, sloppier work habits, etc.)

All responded "No" to this item.

34. In what ways, if any, have the regular employees benefitted?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "None."

Accounting Clerk, Farmers Insurance: "They have gained knowledge about this program."

Personnel Clerk, IRS: No response.

Electron Microscope Aide, Sepulveda Veterans Hospital: "We've all enjoyed."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "The student has been able to take over some of the time consuming tasks such as mounting old tracings and freed the employees for other work that Al could not do. In general, he helped speed the work of the office."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: "Explaining facets of a job."

Budget Analyst, U.S. Customs: "One of them helped supervise Jo Ann. She achieved more sense of responsibility."

Editing Clerk, Mayor's Office: "Being released from a number of basic tasks."

Survey Worker, Mayor's Office: "None. Charlotte's task was specifically tailored for a work experience placement."

Architectural Drafting Assistant, U.S. Customs: "My associates have been able to spend more time on technical work while Shaumon has handled the job of preparing illustrations and layouts for presentation."

Professional Resume Assistant, Atlantic Ritchfield: "Student helped with heavy work load."

Scientific Programming Aide, Litton Data Systems: "No significant benefit."

Dental Assistant, Riley Dental Corporation: "Many little time-consuming tasks were performed by our student worker."

Advertising Copywriter, L.A. Convention Bureau: "A feeling of 'participating' in an experience with school system."

35. Check the items that, if implemented, would in your opinion improve the career experience program.

[1] "Biological research--not at this level though"

[2] "He can go much further in medicine beyond this job."

[3] "Both Steven A. Sherman and Jill Liscom should."

[4] "Yes--if she works"

39. How can the school help this person become a better candidate for employment, in general?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Have the student take courses relevant to a particular field. Encourage the student to be dependable and responsible. Encourage the student to be punctual and reliable."

Accounting Clerk, Farmers Insurance: "Pick the student who will need the job."

Personnel Clerk, IRS: "Background information."

Electron Microscope Aide, Sepulveda Veterans Hospital: No response.

Electrocardiograph Technician, Sepulveda Veterans Hospital: No response.

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: "Set a regular program."

Budget Analyst, U.S. Customs: "By first more work experience, in general. Nothing can replace work experience."

Editing Clerk, Mayor's Office: "More counseling and follow up in programs."

Survey Worker, Mayor's Office: "See 30b." "Longer placement, better counseling, 'trial' period, money."

Architectural Drafting Assistant, U.S. Customs: "The student should be provided with architectural drawing projects that will require him to do all of the pre-drawing research, arrange design meeting, and draw complete architectural plans for the building layout.

Professional Resume Assistant, Atlantic Ritchfield: "No opinion."

Scientific Programming Aide, Litton Data Systems: "More specialized training or education in programming. Counseling in selling himself and improved interpersonal skills."

Dental Assistant, Riley Dental Corporation: "Offer more pre-med classes."

Advertising Copywriter, L.A. Convention Bureau: "Get him to 'open up,' come out of his 'shell,' to communicate, ask questions."

40. What are the student's special strengths?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "She was quick and alert in learning new experiences."

Accounting Clerk, Farmers Insurance: "Intelligence, punctuality, and inquisitiveness."

Personnel Clerk, IRS: "Self confidence, follow instructions very well, overall good worker."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Very dependable and efficient."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "He is intelligent, quick learning, accurate, responsible and pleasant."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: "Gain experience."

Budget Analyst, U.S. Customs: "Dependability, cooperation, accuracy with figures, pleasant personality."

Editing Clerk, Mayor's Office: "Personality and willingness to work."

Survey Worker, Mayor's Office: "Pleasing personality, good work habits."

Architectural Drafting Assistant, U.S. Customs: "1. Natural talent for drawing. 2. Special attention to detail."

Professional Resume Assistant, Atlantic Ritchfield: "Personality, perseverance."

Scientific Programming Aide, Litton Data Systems: "Good technical knowledge and background for his age. Eager to learn."

Dental Assistant, Riley Dental Corporation: "Intelligence, tact, pleasing personality, accuracy of work, speed of work, dependability, ability to work well with others, prior work experience related to career experience position."

Advertising Copywriter, L.A. Convention Bureau: "Follows directions well."

41. What are the student's special weaknesses?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Lack of motivation and initiative. This may have been because her interests were in another field."

Accounting Clerk, Farmers Insurance: "He was placed in the wrong position for his intelligence; therefore, it would be difficult to determine his weaknesses."

Personnel Clerk, IRS: "Punctuality."

Electron Microscope Aide, Sepulveda Veterans Hospital: No response.

Electrocardiograph Technician, Sepulveda Veterans Hospital: "None that we particularly observed."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: "Unfamiliar with this work,"

Budget Analyst, U.S. Customs: "None that I can see."

Editing Clerk, Mayor's Office: "Distracted by friends."

Survey Worker, Mayor's Office: "None."

Architectural Drafting Assistant, U.S. Customs: "None was noted."

Professional Resume Assistant, Atlantic Ritchfield: "N/A"

Scientific Programming Aide, Litton Data Systems: "Needs to develop interpersonal skills."

Dental Assistant, Riley Dental Corporation: "Nothing."

Advertising Copywriter, L.A. Convention Bureau: "Shyness."

42. Please describe what means were used to determine how well the student learned the job skills for which he/she was being trained.

Teller Trainee, Lloyd's Bank: "Student observed and then was allowed to do job on her own."

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "None."

Accounting Clerk, Farmers Insurance: "Observation."

Personnel Clerk, IRS: "Production."

Electron Microscope Aide, Sepulveda Veterans Hospital: "Final product--quality of micrograph and general showing of efficiency in any task."

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Watching him take and mount EKG's. (Personal observation.)"

Special Education Aide, Miller H.S.: "Observation by teacher and supervisorySpecial Education Assistant."

Veterinarian Aide, Chatoak Pet Clinic: "Cassetts, tapes, pictures, talks, etc."

Budget Analyst, U.S. Customs: "By the proficiency with which she performed the tasks and the final results of the projects."

Editing Clerk, Mayor' Office: "Observation."

Survey Worker, Mayor's Office: "Work was reviewed."

Architectural Drafting Assistant, U.S. Customs: "During completion project reviews, instructions given the student are compared with the results and determinations and decisions are made as to how well the student is learning."

Professional Resume Assistant, Atlantic Ritchfield: "Completion of assigned responsibilities."

Scientific Programming Aide, Litton Data Systems: "Project type work - with schedules and deadlines. Close supervision."

Dental Assistant, Riley Dental Corporation: "By the end-product."

Advertising Copywriter, L.A. Convention Bureau: "The end-product was used as a masterlist and supplied to printer. Only a few errors."

43. What could the school have done to make the program more successful?

Teller Trainee, Lloyd's Bank: No response.

Cash Receipts Clerk, Farmers Insurance: No response.

Editorial Assistant, U.S. Army Engineering District: "Send only students that are sincerely interested in the particular work experiences. Also, have the school coordinator keep in closer contact with both the student and the employer to make sure that the program is running smoothly and effectively."

Accounting Clerk, Farmers Insurance: "Pick students who would really need employment. Not those necessarily from the "honors" group."

Personnel Clerk, IRS: "Detailed information to supervisors and more participation from the school."

Electron Microscope Aide, Sepulveda Veterans Hospital: No response.

Electrocardiograph Technician, Sepulveda Veterans Hospital: "Nothing."

Special Education Aide, Miller H.S.: No response.

Veterinarian Aide, Chatoak Pet Clinic: No response.

Budget Analyst, U.S. Customs: "More planning ahead and a longer working period."

Editing Clerk, Mayor's Office: "Closer communication both with student and site."

Survey Worker, Mayor's Office: "See question 11 and 30 a and b!
1. Six weeks is too short a time: the program should at least be a semester. Specific time and credits must be given by the school for the program. The placement supervisors and the high school counselor s should meet in advance with the student. A more specific training program should be planned. The placement should be given the weight of a regular class, but made flexible to the company's time needs.
2. Longer placement, better counseling, 'trial' period, money."

Architectural Drafting Assistant, U.S. Customs: "1. By giving the student another hour of on-the-job training per duty day. 2. By providing the student's OJT supervisor with a background information folder of the student's school activities and technical training."

Professional Resume Assistant, Atlantic Ritchfield: No response.

Scientific Programming Aide, Litton Data Systems: "More advance notice for placing students. Literature on the content and objective of the program."

Dental Assistant, Riley Dental Corporation: "I don't have any suggestions."

Advertising Copywriter, L.A. Convention Bureau: "Screening."

41. In general, how would you evaluate the program?

Very satisfactory
- Electron Microscope Aide, Sepulveda Veterans Hospital
- Budget Analyst, U.S. Customs
- Architectural Drafting Assistant, US Customs

Satisfactory
- Teller Trainee, Lloyd's Bank
- Accounting Clerk, Farmers Insurance
- Personnel Clerk, IRS [1]
- Electrocardiograph Technician, Sepulveda Veterans Hospital
- Veterinarian Aide, Chatoak Pet Clinic
- Survey Worker, Mayor's Office
- Professional Resume Assistant, Atlantic Ritchfield
- Scientific Programming Aide, Litton Data Systems
- Dental Assistant, Riley Dental Corporation
- Advertisint Copywriter, L.A. Convention Bureau

Unsatisfactory
- Cash Receipts Clerk, Farmers Insurance
- Editorial Assistant, U.S. Army Engineering District
- Editing Clerk, Mayor's Office

No response
- Special Education Aide, Miller H.S.

[1] Note: "Student did not spend enough time on job for such a detailed questionnaire. I think if more effort were spent on preparing the program with complete details, as the effort was spent here in preparing the questionnaire, the program would be more successful."

45. Check the item below that best describes your feelings about participation in the career experience program.

Participation in the career experience program was very enjoyable.

Electron Microscope Aide, Sepulveda Veterans Hospital
Special Education Aide, Miller H.S.
Budget Analyst, U.S. Customs
Architectural Drafting Assistant, U.S. Customs
Professional Resume Assistant, Atlantic Ritchfield
Scientific Programming Aide, Litton Data Systems

Participation in the career experience program was somewhat enjoyable.

Teller Trainee, Lloyd's Bank
Editorial Assistant, U.S. Army Engineering District
Accounting Clerk, Farmers Insurance
Personnel Clerk, IRS
Electrocardiograph Technician, Sepulveda Veterans Hospital
Veterinarian Aide, Chatoak Pet Clinic
Survey Worker, Mayor's Office
Advertising Copywriter, L.A. Convention Bureau

Participation in the career experience program was not enjoyable at all.

No feelings one way or the other.

Editing Clerk, Mayor's Office
Dental Assistant, Riley Dental Corporation

No response

Cash Receipts Clerk, Farmers Insurance

V

SCHOOL COORDINATOR PRETEST RESPONSES

1975 CAREER EXPERIENCE PROGRAM
SCHOOL COORDINATOR QUESTIONNAIRE I

Name: _____ Date: _____

School Title or Position: *Sample = 4*

Years of Vocational/Industrial Experience: _____

1. Please list other school personnel, besides yourself, who are directly or indirectly involved with this career experience program. Specify the responsibilities of each in relation to this program.

	Number Involved	Program Responsibilities
Teacher	2	
Psychologist		
Guidance Counselor	2	
Probation Officer		
Principal	3	
Other (specify)	3	

1. *Teacher* -*"Those who have students in the program will have to have a class time when student can share experience."*

Gifted and Honors Counselor -*"Coordinator checked with him on her progress and activities. He knew the students and made suggestions or ok'd their selection. In several instances he discussed program with prospective employers."*

Principal - *"Approved credit plan, discussed teacher participation."*

"Continuing."

Other - *"Bob Myers - doing feasibility study on innovative ed. No responsibilities - provided contact with CSUN - was very interested in program."*

"Miss Munson, Director of Curriculum, asked me to find a student for this program."

2. Do you feel that the career training options provided by this program represent career areas not currently offered on a large scale by other school district programs? Yes 3 No___ Don't Know 1

3. Which of the following options has your school chosen for having students demonstrate performance skills at the completion of the career experience program? (Check more than one, if applicable.)

___ Employer's signature on the Permit Form

___ Student demonstrates performance skills on campus, for coordinator

___ Student demonstrates performance skills at job site, for coordinator

___ Student takes a written examination

1 Other (describe) *"Students will share their experience in an appropriate class--or an AP class whose work is completed after AP test."*

3 Option to be used has not yet been chosen

4. Will course credit be given for students who successfully complete this career experience program? Yes 4 No___ Undecided___

If "yes," which of the following methods of assigning course credit have been chosen by your school?

___ Give course credit, certify the DPS (demonstrated performance skills), but give no DPS credit

___ Course credit, certification, plus 15 or 25 credits for the DPS based upon the tentative guidelines established by the Division of Instruction, Educational Goals

3 Course credit, certification, plus a sliding scale of DPS credits (5 to 25) based on number of hours in training (current standard is one unit credit for 12 clock hours) *(One added: "Tentatively agreed upon")*

1 Other (describe) *"Five credits for each 60 hours of instruction. DPS method not determined yet."*

___ Option has not yet been chosen

5. Please describe how students were recruited and what criteria were used to select them for participation in this career experience program. (Be sure to include the part, if any, played by participating teachers in the recruiting and selection process.)

5. *"I was asked to find a student for the Animal Caretaker position. Since I had enrolled Janet Mosten in Animal Care and Control last semester and Veterinary Assistant this semester, I knew she was well qualified. I also checked her cumulative record and verified that she is an excellent student."*

"I was not in on the selection of students, but I believe recruitment was by interest only."

"Computer printout source--summons used. Teacher and classroom contacts for some."

"Coordinator spoke to several A.P. and Honors classes describing program and benefits of participating. She told of available jobs. She collected cards from interested students which listed their names, interest in a particular career area, and available time. Coordinator sought jobs for particular students, called them at home or summoned them to office to discuss available job. Some students heard about the program from others and came into see coordinator. A couple of teachers were asked for suggestions of students, but students were not interested, generally. Students generally were in A.P. Honors classes."

6. Please describe the method and criteria used for selecting teachers for participation in this career experience program.

6. *"I was chosen since I handle the Career Education Program at Van Nuys High School."*

"Not aware of the method used."

"Those with related classes, such as drafting and business, as well as journalism, were contacted."

"No specific selection of teachers was made. (We did choose teachers who seem more willing to cooperate in innovative ideas from program of each student. Nine were selected from 20+ programs.) They are the teachers of the students selected to participate. A.P. and Honors teachers can give class time to the project after A.P. tests. Generally, sharing of the experiences will take place at the end of the semester. If the career relates to a particular class, student will share experience in that class i.e., journalism student will share public relations/journalism job (at Pacific Telephone) in her journalism class. (However, woodshop teacher does not seem "interested" in woodworking skills job -- so we will use another class.)

7. How were teachers briefed or prepared for participation in this career experience program?

4 Individually briefed — *One added: "Not actually briefed. I was shown the Employer Questionnaire.*

1 Group session was held

8. Who was responsible for acquainting the participating teachers with the nature and goals of this career experience program?

2 Coordinator

1 Principal

2 - Counselor

1 Other (specify) *"There are no ~~participating teachers at this~~ time."*

9. Please describe the sequence of events that occurred during the briefing session. (If a written agenda is available, please note here and attach.) List teacher concerns and questions about the program.

___Written agenda is attached

9. "As I previously mentioned, Miss Munson showed me the Employer Questionnaire and asked me if I knew a qualified student. I checked my records and recommended Janet Mosten."

"1. Inquiry of interest. 2. Tour of program facilities."

"Verbal contact only."

"This has not yet taken place--scheduled for 4/74."

10. How were students (or how will they be) briefed for participation in this career experience program?

3 Individually briefed by coordinator

___ Individually briefed by teacher(s)

1 A group session was held

1 Other (describe) *"Coordinator spoke to several A.P. and Honors Classes. Some had read me a letter sent to their parents telling about the program."*

If a group session was held:

a. Who was it (will it be) conducted by? (Give title of school person.)
"Career coordinator."
"Coordinator."

b. What other school personnel were (will be) present at this session?
"Not in on this session."(Career coordinator)
"Classroom teacher. Honors counselor sometimes." (Coordinator)

c. Briefly describe the agenda for this session, or the sequence of events that took place, and highlights of the session. (If you have a written agenda, please note here and attach.)

___ Written agenda attached *"Coordinator told about program benefits, available jobs. Answered any questions. Handed out cards for home, job or career interest, available time. Collected cards."*

11. Will students miss any classes as a result of participation in this career experience program? Yes___ No 4 Don't Know___

If "yes":

a. Approximately how many hours per week of class will they miss? _____

b. In general, what were the reactions of teachers concerning the class time to be missed by participating students?

___ Mostly negative ___ Mostly neutral

___ Mostly positive ___ Mixed reactions

12. Did the school assist students in arranging for transportation to and from the job site? Yes 1 No 3

If "yes":

a. What percent of the students needed assistance?

___ 25% or less ___ 51% - 75%

___ 26% - 50% X 76% or more

b. Please describe how transportation assistance was provided.

"School district bus."

12. *The coordinator who responded "yes" said: "Coordinator discussed transportation with students. Lack of transportation was a factor in locating jobs and placing students. While there are more buses in our area now, there still is a time factor involved making bus transportation unfeasible in most cases."*

13. Have you had an opportunity to visit the job site(s)? Yes 2 No 2

13. *Comment: "I visited every job site, some more than once, to describe the program and to get the necessary signatures. In most instances I took the student to the job the first time. I usually saw just where the student would be working and met other employees."*

If "yes," please describe briefly what occurred and the topics discussed with the site contact/employer.

13. *(continued)*

"I saw where the student would be working and met other personnel. I told the employer the type of student we would send and why we were doing the project. Some employers had more questions than others. Big companies take more time. All meetings were pleasant and cordial."

14. Do you feel that students should be paid for their participation in this career experience program? Yes___ No 2 *(Two said, essentially, "It depends")*

Why or why not?

14. (NO). "It is part of their education. They are receiving credit. They are "taking" from the employer more than they are "giving" in most cases. I think employers should be paid for training the students. Then we might have more job sites available."

(NO). "Students are receiving credit for course and intrinsic benefits."

(NO RESPONSE). "I'm not sure. Maybe during the training period, school credit is sufficient, but if the student is acceptable, an effort should be made to obtain at least part-time or summer employment for pay."

(YES and NO). "But it would be much easier for filling classes if small payments could be made. Some students took time off paid jobs to participate."

This is subject to debate--the students in the GHHS program for the most part were gifted and/or capable students and had the maturity to appreciate the value of the program. Also, many knew what their career interests were. However, many students must work although they would like to participate. Also, a number participated hoping it would mean a summer job. I think it might be difficult to find a large number of students willing and able to give 40-60 hours with no pay. A couple of students have had to drop out to seek paid employment. A number are working in the program, elsewhere for pay, plus school and activities --a heavy load."

If "yes," who do you feel should be responsible for providing the student salary funds? (If you check more than one, please circle the source that you feel should be primarily responsible for providing the funds.)

1 Employer

1 School district

___ Community

2 Government grant *"To give funds to school district"*

1 Private foundation grant

___ Other (describe)_____

15. How important do you feel that each of the following goals/objectives are for a career experience program? (Indicate the degree of importance by checking the appropriate column.

	Major Importance	Minor Importance	Unimportant	No Opinion
a. Transition experience from school to full-time work	3	1		
b. Basis for selecting or ruling out a career area	2	3		
c. Learning basic job skills	2	2		
d. Student awareness of and knowledge of skills needed for progress in a particular area	3	1		
e. Personal development (self confidence, poise, initiative, etc.)	4			
f. Social skills development (ability to work with others, communication skills, etc.)	4			
g. Greater student appreciation of the value of education	2	2		
h. Opportunity to observe a variety of jobs being performed	3	1		
i. Reinforcement of theories and principles learned in classroom and observation of applications of these theories and principles in actual job situations	1	3		
j. Development of student competence in a particular skill area	2	2		
k. Decreasing student dropout rate	1	1	2	
l. Promoting better communication between school and industry	2	2		
m. Other (specify) *One responded here: "Appreciating the need for entry level skills to a job regardless of one's ultimate goal (i.e., a professional degree or a college degree")*				

16. How important do you feel each of the following factors are in contributing to student success in this career experience program?

	Major Importance	Minor Importance	Unimportant	No Opinion
a. Intelligence *Comment: "Depends on type of job".*	2	2		
b. Appearance	2	2		
c. Tact	2	2		
d. Motivation	4			
e. Initiative	4			
f. Pleasing personality	3	1		
g. Self confidence	3	1		
h. Punctuality	4			
i. Self respect	3			1
j. Accuracy of work	4			
k. Speed of work		4		
l. Self control	4			
m. Dependability	4			
n. Poise	3	1		
o. Good manners	3	1		
p. Verbal ability *Comment: "Depends"*	2	2		
q. Ability to work well with others	4			
r. Prior work experience related to career experience position		3	1	
s. Course work related to career experience position	1	2	1	

17. Do you plan to provide information about the career experience program to others in the school and the community? Yes 3 No___ Don't Know 1

If "yes": *Comment: "Depends. So far, my experience is very limited--one job, one student who is just beginning*

a. What audience do you plan on reaching?

2 Parents — 1 Other schools

2 Other students — 1 Other employers

2 Community groups — ___ Other (specify)_____

b. What means of communication do you plan to use?

___ Newspaper — 1 Flyers

___ TV — ___ Radio

3 Personal appearances — ___ Other (specify)_____

18. What problems, if any, have developed so far in preparing for this career experience program?

18. *"A time pressure problem. I had about 4 weeks to find 2o+ jobs and the 20+ students who had the interest and available time. Large companies have red tape and cannot commit themselves readily. I would have preferred more lead time. Also, while I understand why, it would have helped to have an office, desk, files, phone, business cards, typewriter."*

"Developing a meaningful mark for each student other than basing it on attendance. Developing an instrument to test entering and leaving knowledge."

"We experienced difficulty in matching students with the programs because we were trying the match in the middle of the semester. Computer usage would be necessary if this match were to be done on a large scale, as well as clerical time to do the work."

1 - No response

19. What further problems, if any, do you anticipate during the course of this career experience program?

19. "The hourly pay situation is not ideal. I know I have thought a lot about the program at night, away from the job, etc. Also, now that the major work is over, I am putting in 1-2 hours a day (or less), but there is still the responsibility of being available, most of the time. I'm not sure what the answer is because the initial part of the program takes too much time to ask a counselor to do it, but the latter part of the program would be better if it could be turned over to a counselor since it doesn't pay enough to be tied to the job."

3 - No response

VI

SCHOOL COORDINATOR POST TEST RESPONSES

1975 CAREER EXPERIENCE PROGRAM
SCHOOL COORDINATOR QUESTIONNAIRE II

Name: *Sample = 4* Date: _____

School title or position: *Campus Coordinator - 1*
Career Advisor - 3

1. Which of the following options did your school select for having students demonstrate performance skills at the completion of the career experience program? (Check more than one, if applicable.)

   3 Employer's signature on the Permit Form.

   ____ Student demonstrates performance skills on campus, for coordinator.

   ____ Student demonstrates performance skills at job site, for coordinator.

   ____ Student takes a written examination.

   3 Other (describe) *-Coordinators talked with contact person.*
   -Verbal presentation in a class
   -Demonstrated performance skills not a graduation requirement

2. Will course credit be given to students who successfully complete this career experience program? Yes 3 No 1

   If "yes," which of the following methods of assigning course credit was chosen by your school?

   1 Gave course credit, certified the DPS (demonstrated performance skills), but gave no DPS credit.

   0 Course credit, certification, plus 15 or 25 credits for the DPS based upon the tentative guidelines established by the Division of Instruction, Educational Goals.

   2 Course credit, certification, plus a sliding scale of DPS credits (5 to 25) based on number of hours in training (current standard is one unit credit for 12 clock hours). *One respondent said: "Certification, but it does not fulfill any requirements."*

   2 Other (describe) *-"Credit based only on DPS - 5 credits"*
   -"Gave 10 credits for 120 hours"

   Probably one of the most important items, but you will be more aware of the significance of the responses

3. Did you get an opportunity to visit the job site(s)? Yes 2 No 2

   If "yes,"

   a. Please describe briefly what occurred and the topics discussed with the site contact/employer.

   Only one comment given: "I visited each job site in my original contact, then when I took the student for the first time. In some instances, I stopped by to check on the progress of getting permission to

"1 or 2 for all"
"1 - 4 times"

b. How many times were you able to visit the job site(s)? _____ times

c. Were you able to observe the students being trained or attending to any job tasks? _____ Yes __2__ No

If "yes," briefly describe what occurred.

3c. "I am sure I could have /observed/. The fact that I had asked both students and employers to contact me in the event of any problems seemed enough. I trusted both and looking in on them seemed an intrusion or lack of trust."

3 - No response

4. Did you ever contact the employer by phone as a means for monitoring students performance? __4__ Yes _____ No

If "yes,"

a. How many times? _____ times *2, 3, 1-3, 3-5*

b. Please describe the types of questions that were asked and the responses given.

4b. "I asked if everything was satisfactory, and it always was. Once I called because the "employer" was not fulfilling his responsibility, and another time to clarify the situation due to the absence of the supervisor. In all instances the conversations were cordial. One job just didn't work out--working with aphasia children."

"Job duties and responsibilities. Skills learned."

"Trying to determine if the experience was meaningful."

"How was (student name) working out? Did you have any problems?"

5. Did the employer ever contact you about any student or program problems?

2 Yes 2 No

If "yes,"

a. Briefly describe the problems

5a. "Sandra Bujaider had stopped going to Arco."

"When student did not show up."

"I gave each employer my card with a school and a home number and asked that I be called if there were any problems or questions. No one ever called. The fact that we were dealing with gifted, responsible, students is surely one reason why there were no problems."

1 - No response

b. How were they dealt with?

5b. "Called student and found out about her problem."

"I followed up the situation."

2 - No response (One of these had no problems--see #5a)

6. Do you feel that the students should have been paid for their participation in this career experience program? Yes ____ No 4

Why or why not?

6. "But, participation would have been better as well as recruitment would have been easier. Some students had to give up paid employment to take this program."

"They never reach a point where they are productive. This is really exploratory in nature."

"...although some of the jobs were of real benefit to the employers. Because this was part of a student's education, and he is not paid for other classwork. However, I think a student should receive class credit that would fulfill some specific requirement, i.e., practical arts. Since most of my participants were graduating seniors, the DPS credits meant nothing toward graduation requirements. If fulfills

no requirement for 11th graders, either. Another reason not to be paid is that this program enabled some students access to jobs they could never have gotten on their own, i.e., Litton Data Systems for a student who could do computer programming. I believe he was going to get a summer job. Another student got to work at a travel bureau, is getting extra training and a summer job. Only through our program did they get past the front door."

"Get students who are really interested to learn if no money is involved."

If "yes," who do you feel should have been responsible for providing student salary funds? (If you check more than one, please circle the source that you feel should have been primarily responsible for providing the funds.)

_____ Employer *(None answered "yes")* _____ Government grant

_____ School district _____ Private foundation

_____ Community _____ Other (describe) _____

7. Did your company provide information about the career experience program to others outside the company? Yes 1 No _____ Don't know 3

If "yes,":

a. What audience did the company reach?

_____ Parents 1 Other schools

_____ Other students _____ Other employers

_____ Community groups _____ Other (specify) _____

b. What means of communication did the company use?

_____ Newspaper _____ Flyers

_____ TV _____ Radio

_____ Personal appearances 1 Other (specify) *Verbalization*

8. Should students who have successfully completed the career experience program receive assistance in finding a job from the school or participating employer? (Check one.)

_____ Yes, assistance should be provided by the school.

_____ Yes, assistance should be provided by the employer.

-3 Yes, assistance should be provided by both the school and employer.

1 No, students should assume full responsibility for finding a job.

8. *"However, this may include asking the employer for his help, recommendation or suggestions as well as looking into the career advisor's available jobs at school and/or asking for his help. Regarding the latter, I think the work experience advisor should be doing what I was doing all along... trying to find jobs for students with particular career interests, offering the possibility of letting the student gain experience without pay and then hiring him if he performs well." (for the coordinator who responded "no")*

9. How important do you feel that each of the following goals/objectives are for a career experience program? (Indicate the degree of importance by checking the appropriate column.)

	Major Importance	Minor Importance	Un-important	No Opinion
a. Transition experience from school to full-time work	3	1		
b. Basis for selecting or ruling out a career area	3	1		
c. Learning basic job skills	3	1		
d. Student awareness of and knowledge of skills needed for progress in a particular area	4			
e. Personal development (self confidence, poise, initiative, etc.)	4			
f. Social skills development (ability to work with others, communication skills, etc.)	4			
g. Greater student appreciation of the value of education	1	3		
h. Opportunity to observe a variety of jobs being performed	3	2		
i. Reinforcement of theories and principles learned in classroom and observation of applications of these theories and principles in actual job situations	2	2		
j. Development of student competence in a particular skill area	2	2		
k. Decreasing student drop-out rate	3			1
l. Promoting better communication between school and industry	2	2		
m. Other (specify) _____				

On i, one coordinator commented: "Important, but I doubt that it often occurred."

On k, she commented: This woul be of major importance. Howeve the typical dropout wou probably not perform sa factorily for an emplo to keep him. A low le skill job would not te many students for no p I felt a real obligatio to provide the employer with a proven, responsible..."

(None wrote in a response for m)

10. How important do you feel each of the following factors were in contributing to student success in the career experience program?

	Major Importance	Minor Importance	Un-important	No Opinion
a. Intelligence	1	3		
b. Appearance	1	2	1	
c. Tact	1	3		
d. Motivation	4			
e. Initiative	3	1		
f. Pleasing personality	1	3		
g. Self confidence	3	1		
h. Punctuality	4			
i. Self respect	1	3		
j. Accuracy of work	3	1		
k. Speed of work		4		
l. Self control	1	3		
m. Dependability	3	1		
n. Poise	1	3		
o. Good manners	1	3		
p. Verbal ability		4		
q. Ability to work well with others	4			
r. Prior work experience related to career experience position	1	1	2	
s. Course work related to career experience position	2	1	2	

Only one student for this coordinator--was an animal caretaker

11. How many students did not finish the program? ____ students *0, 1, 4, 4,*

If any students did not finish, please list all reasons for dropping out or being terminated.

11. *"(1) Duplication of another training project that was paid. (2) Mother ill. (3) Mother in Mexico. (4) Not prepared to train her."*

"(1) Unknown."

"(1) Had to drop out to get a paying job to meet college costs. Was not unhappy with the program. (2) Said he had too little time but actually felt the job was beneath his abilities. He only went twice and didn't give it enough time to develop. (3) Not related enough to a business experience (at C.S.U.N.), parental pressure and limited time. (4) Job site didn't work out--aphasia children became too excited. Student was satisfied. (A fifth, working with aphasia, switched to a bank job.)

"Only one student started and she completed the program."

12. What changes, if any, would you make concerning how students were recruited and the criteria used to select them for participation in the career experience program?

12. *"More lead time. Greater teacher involvement. More counselor involvement. Pre-registration to fit in program with an occupational interest."*

"Students had to be selected who could make the arrangement for schedule and transportation. Therefore, excluded a lot of good candidates."

"Recruitment should take place before the start of the semester, not during. It should not be limited to gifted students. There should be better communication within the school. My only communication was to speak to several AP and honors classes. Announcements read to these few classes brought little response. It is important to select responsible students which immediately eliminates many from the hope of participating."

1 - *No response*

13. What changes, if any, would you make concerning the method and criteria used for selecting teachers to participate in the career experience program?

13. "Greater involvement with many teachers."

"A board coordinator should introduce the program to the academic department from which students are taken."

"The planned participation of teachers, coming as it did mid-way through the term, was entirely impractical. They had no time to change their plans, and since several were teaching AP classes, they wouldn't have changed even with advanced notice. Some of the most likely participants in relation to the job had the reputation of being against change and anything innovative so their help was not requested."

1 - No response

14. In general, how well do you feel the students learned the job skills for which they were being trained?

__1__ Very well ____ Moderately well ____ Not well at all

__2__ Have no evidence other than employer statements *1 - No response*

15. How many of the teachers at your school were asked to integrate students' work experiences with classroom learning? __1__ teachers *(3 said none; one said one)*

How many teachers were willing to do so? __1__ teachers

If any were willing:

a. Did you get an opportunity to visit the classroom(s) to see what occurred?
____ Yes __X__ No

If "yes," please describe _____

b. Generally, how do you think the participating teachers feel about the career experience program?

____ Mostly negative ____ Mostly neutral

__X__ Mostly positive ____ Mixed reactions

c. Please list any comments or concerns made by teachers that you can recall.

15a. 3 - No response

"Teachers were asked to allow time before the end of the year to let students share orally their experiences with the class. All teachers were cooperative, but only cooperative teachers were asked.

15a. "Still to come - will report later. A student at a travel agency presented a travel program to a literature class in connection with a book the class was reading concerning the Caribbean. Teacher reported it was delightful."

15c. 2 - No response

"She appreciated the help."

"Teachers have no time to incorporate changes for the sake of one or 2 students. Job experiences do not relate that closely to most classes. Curriculum changes would have to come from downtown, supervisors or someone other than a coordinator like myself called in on a short term basis. Teachers would need to know before the semester begins if they are to incorporate changes. A.P. teachers seemed to infer they could use more class time as it was in trying to prepare students for AP tests."

16. Do you feel that students should have a course devoted to preparing them for participation in a job situation taken at the same time or just before participating in the career experience program?

__2__ Yes ____ No __2__ Not sure

17. If you could do it over again, would you have chosen to participate in this program?

__2__ Yes ____ No __2__ It depends

Please explain:

17. "I could have done a better job with a 36-hour day." (NO)

"I need to know much more in advance. I have to have the commitment for support from some academic teachers and they must put the effort into it." (IT DEPENDS)

"I would have learned job skills opening the way to employment while I was in school. I might have learned whether I did or didn't like the field I thought I was interested in. This is not a particularly valid question, though, because a teenager's world is so different than when I was a teenager. Life was very slow and dull by comparison. On the other hand, during war years, teens got job they couldn't get today."

1 - No response.

18. What changes would you like to see made in the career experience program to make it a more rewarding and beneficial experience for:

a. the school? (Answered together for both school and student). "A greater breadth and length of program. I would like the program to run for 10 weeks to a semester with a possibility of a job waiting at the end."

"Get the commitment for involvement from some academic departments and let them carry the ball."

b. the student? "The school seemed to get no benefit from the program except for public relations.

"More advance notice."

Student

"Pay."

"Provide transportation."

"He should know about the possibility of participating ahead of time so as to plan his schedule accordingly. He should get graduation requirement credits, then no one would drop out. Ideally, he would like to know if there is a chance of getting a job at the job site if he performs well. The hours required to learn the job might be more accurately worked out. There should be some regular basis of communicating with the coordinator."

1 - No response.

19. If you had to do it over again, what would you personally do differently concerning supervision and operating procedures?

19. "It takes more time than I have to supervise, etc. There needs to be closer contact with the training site."

"Attempt to get some academic teachers to pursue this project."

"I would have liked more lead time in securing the job sites. There should have been more communication possibilities with students and faculty. (Most of the faculty and students have no idea this program is going on). I could have used an office, phone, files, etc. Somehow it should be a full time job with regular hours for contact purposes. There should be some way of checking with students on a regular basis."

"Try to find time to visit job site."

20. Check the items that, if implemented, would, in your opinion, improve the career experience program

4 More school-employer communication

4 Handbook describing objectives of the career experience program, and its operating procedures

2 More school coordinators

2* Increase the time students spend in the program

* Decrease the time students spend in the program

One coordinator commented: "Depends on the job"

3 Student follow-up to obtain information useful for program modification and revision

20. Comment

"I can possibly see a career ed. class where students check in on a regular basis, share their experiences and problems and communicate on a regular basis with the coordinator."

21. Did the employer raise any obstacles that hindered the program? ____ Yes 3 No
(One responded "?")

If "yes," please explain

21. 3 - No response

(Responded "?" to item.1 "Larger companies have so much red tape that it took a while to get their o.k. and with such limited time, it was a problem (Litton, banks)."

22. Did the employer screen students in any manner? 2* Yes 2 No
(One said: "With the exception of 1 student")

If "yes," how many students were turned down? 0-1 students

If any were turned down, please explain why.

22. 3 - No response

(Responded "No - with one exception" to item) "A communication problem between in-town contact-job site person got an erroneous idea of student's skills--when it was cleared up, there wasn't time left for the student to participate (Pacific Telephone)."

23. Describe the benefits the school derived from participation in the career experience program.

23. "Provides a better educational experience for some students."

"Experience for the students."

"Possibly good public relations with the students and parents of those who were happy with the program."

1 - No response

24. What could the employer have done to make the program more successful?

24. *"Probably involve the student in more activities."*

"A greater readiness for the student and her training."

"None ever called me (except to ask about the forms). Perhaps the students forms will tell more."

1 - No response.

25. Please describe any problems that developed during the career experience program that haven't already been mentioned.

25. *"One student said all he did was sit around and watch."*

"The forms sent to the employers were unexpected and considered a nuisance. Coordinator did not know about them -- they caused some confusion and some irritation."

2 - No response

26. Please list the main reasons for the degree of program success that has been achieved by your school.

26. *"Interested students."*

"Good students."

"Working with responsible, superior students. Working in a stable, positive community (Northridge and Granada). It may Be immodest But I think the coordinator was a large factor. I can't really see many people coming in on such short notice and doing what I did."

1 - No response.

27. Check the item below that best describes your feelings about participation in the career experience program

1* Participation in the career experience program was very enjoyable.

1 Participation in the career experience program was somewhat enjoyable.

1** Participation in the career experience program was not enjoyable at all.

1 No feeling one way or the other.

*"At times very frustrating and pressured at others."
** "I felt it was rewarding."

27. Comment

"I enjoy young people and was and am thrilled when one of them lands the job or is excited about his job. I enjoy meeting people. I enjoy speaking to groups. However, I disliked being turned down. The lack of an office was frustrating."

28. In general, how would you evaluate the program?

___3___ Very satisfactory ___1___ Satisfactory _____ Unsatisfactory

28. *Comment*

"The program is very satisfactory and exciting in the instances where it has been successful. However, I do not see how it could be expanded to include an entire class or school on the basis with which it was conducted. It takes too long to find job sites on an individual contact basis. Many of the job sites are one time only sites.

I can see the Board of Ed. making an all out effort to have career ed. by contacting industry and paying them to provide career experience with a classroom type of training for a few sessions and then placing the students in the actual job site. The Board of Ed. funds would pay for the coordinator at the job site. On the other hand, once the student is trained and performing good work, he should be paid. On a smaller scale, the school coordinator could speak to service groups (Kiwanis), Chambers of Commerce, etc. to enlist their aird. It is vital that the Board of Ed. provide Workmen's Comp. insurance and that there be a contact at the school to deal with problems that may arise. A small business man may not feel he has the time to give to train someone (or can afford a supervisor's time) but if he were paid to do so, could afford it.

Why don't we have students doing some jobs at school that outside people are hired to do? Painting, electrical repairs, audio-visual repairs, etc., secretarial work. GHHS has a catering class which is a great example of career experience.

I can also see possibly having a career experience class as I have mentioned elsewhere with class time devoted to filling out job applications, interviewing, having the students go out and look for a job backed up by the school providing the insurance and a coordinator. One of my students did that at the Va hospital...he made the contact and then I went with the forms, etc.

Is there any coordination now between schools' programs already in existence which provide career experience...i.e., GHHS's catering class..are there others? A health services class has been proposed at Granada. Could woodworking classes accept jobs, electrical classes hire out students, etc? Do schools share how these classes are set up and working?"

EVALUATION OF COMPETENCY BASED WORK EXPERIENCE/EXPLORATION PROGRAM: STUDENT AND SUPERVISOR PERSPECTIVE

EVALUATION OF COMPETENCY BASED WORK EXPERIENCE/EXPLORATION PROGRAM: STUDENT AND SUPERVISOR PERSPECTIVE

I. Introduction

This project was aimed at developing and field testing 60 different competency based work experience/exploration contract models appropriate for secondary students. While the overall program was evaluated from several points of view, this evaluation effort was specifically concerned with perceptions, attitudes and beliefs about the work experience/exploration program from the student and supervisor (of the cooperative organization) points of view. Data were gathered from both participating students and supervisors before and following the work experience assignments. The use of impact measures was precluded by the short time frame of this project.

After an extensive review of the work experience literature, the following variables were selected for measurement purposes and assessed through the administration of questionnaires to students and supervisors (see Appendix I for actual questionnaires employed).

1. Student Pre-Work Experience Variables

- Standard demographic information
- Work and/or educational plans following graduation from high school
- Types of work they anticipate pursuing following formal education
- Amount and types of work experience they have had
- A rating of how helpful they thought their school learnings would be in their work experience placement and how they thought this learning would help
- A rating of how helpful they thought their experiences outside of school would be in their work experience placement and how they thought this learning would help

- How likely it would be that they would seek full time work in the same area as their placement following completion of school
- The extent to which they anticipated that their work experience placement would be enjoyable and satisfying and how it would or would not be enjoyable and satisfying
- Their perception of being prepared to hold down a full time job and why
- The extent to which they anticipated that their supervisor would be satisfied with their work and why
- What kinds of skills and knowledge they felt were necessary to perform well in their work experience placement
- The kinds of things they hoped to learn in their placement

2. Student Post-Work Experience Variables

- Work and/or educational plans following graduation from high school
- Types of work they anticipate pursuing following formal education
- A rating of how helpful they thought their school learnings were in their work experience placement and how these learnings were helpful
- A rating of how helpful they thought their experiences outside of school were in their work experience placement and how these learnings were helpful
- How likely it would be that they would seek full time work in the same area as their placement following completion of school
- The extent to which their work experience placement was enjoyable and satisfying and how it was and was not satisfying

- Their perception of being prepared to hold down a full time job and why
- The extent to which they felt their supervisor was satisfied with their work and why
- What kinds of skills and knowledge they felt were necessary to perform well in their work experience placement
- The kinds of things they learned in their work experience placement
- The extent to which they favor providing work experience programs to other students in the future
- The kinds of things that could be changed in the work experience program that would make it more valuable

3. Supervisor Pre-Work Experience Variables

- Basic demographics and job description
- Expectation of how helpful what the student has learned in school will be in their work placement experience and how it will be helpful
- Expectation of how helpful outside of school experiences will be in the student's work experience placement and how they will be helpful
- Probability of student getting a job in this work experience area upon completion of school (providing the student works out well)
- Expectation that the student's work experience will be enjoyable and satisfying and why
- Expectation of satisfaction with student's work and what will lead to satisfaction and dissatisfaction
- Skills and knowledge necessary to perform well in placement
- Kinds of things supervisor hopes to teach the student in their work experience placement
- Extent to which supervisor expects work experience placement will be helpful in preparing students to assume a full time job in the world of work

- Extent to which supervisor expects work experience program will be helpful in preparing students to assume a full time job in this specific job placement area
- Extent to which they expect the placement to be of service (1) to the student and (2) the cooperating organization
- Extent to which supervisor favors having students gain work experience with their company
- Value of work experience programs to the organization
- Reason for agreeing to participate in a work experience program
- Extent to which job will be modified to accommodate student
- Amount of supervision that will be provided to the student
- Whether there is an existing training program for new employees
- Whether or not supervisor has any reservations about participating in the work experience program

4. Supervisor Post-Work Experience Variables

- Extent to which what the student's school learnings were helpful in their performance in the work experience placement and how it was helpful
- Extent to which the student's experiences outside of school were helpful in their performance in the work experience placement and how these experiences were helpful
- Likelihood of the student being able to obtain a full time job in the area of their placement upon completion of school with either the cooperating organization or some other company

- The extent to which the supervisor believed the student's work experience was enjoyable and satisfying
- Supervisor's level of satisfaction with the student's performance
- Types of skills and knowledge learned by the student
- Extent to which the work experience was generally helpful in preparing the student to assume a full time job in the world of work
- Extent to which the work experience was helpful in preparing the student to assume a full time job in the specific job placement area
- Rating of the degree the placement experience was of a service to (1) the student and (2) the company
- Extent to which supervisor favors providing work experience opportunities to students
- Whether the company's work atmosphere is formal or informal
- Ways in which the work experience program was judged beneficial to the participating organization
- Ways in which the work experience program could be modified to make it more valuable for the organization and the participating students

II. Evaluation Methodology

The short time frame in which evaluation data could be collected coupled with the limited sample size imposed severe constraints on the type of data that could be collected for evaluat ion purposes and the development of an evaluation design.

1. Evaluation Design

The design employed as a pre-test post-test model involving both participating students and the students' immediate supervisors. (See Figure 1).

Figure 1. Evaluation Design

Pre-Test One Week Prior to Work Placement	Post-Test Immediately Following Completion of Assignment
Administer Student Questionnaire I Administer Employer Questionnaire I	Administer Student Questionnaire II Administer Employer Questionnaire II

The pre-test questionnaires were largely aimed at assessing the students' and supervisors' expectations of the work experience placement prior to actual involvement in the program (the expectancy variables for these two populations have been summarized above). The post-test questionnaires provided performance based measures of these same variables, plus recommendations for improving the work experience program and other outcome measures. Since the items paralelled one another on the pre-test and post-test for both students and supervisors, it provided for congruency measures within the student sample, supervisor sample and between these two samples.

2. Questionnaire Development and Pre-Test

The questionnaires were developed after a thorough review of the work experience literature and the grant proposal to ensure inclusion of relevant and important work experience related variables. Following

the development of these questionnaires, they were pre-tested on the pilot sample, completed questionnaires were reviewed with the pilot sample and revised according to pre-test findings.

3. Interviewer Training and Data Collection

The student sample was drawn from three different high schools in Los Angeles City Unified School District. For each school there was a work experience coordinator with responsibility for the recruitment of students and coordination of the program. To ensure the quality of the student data, these coordinators were trained to administer Student Questionnaires I and II through using a structured interview procedure. Supervisors were provided with questionnaires prior to student placement and completed them at designated times.

III. Results and Discussion

Due to the return rate of the four questionnaires administered being considerably less than anticipated (total N of 60), it was not feasible to perform certain statistical procedures such as tests of inference (calculating significance levels for various comparisons) and correlational analyses. The actual questionnaire return rate for students and supervisors is summarized in Table 1.

Table 1. Return Rate of Questionnaires

Type of Questionnaire	Number of Questionnaires Returned
Student Questionnaire I	36
Student Questionnaire II	21
Supervisor Questionnaire I	19
Supervisor Questionnaire II	8

There are also problems posed in comparability of questionnaire data across students and employers in that all four questionnaires were completed in only six instances. Consequently, evaluation results were restricted to descriptive statistics, with, in many cases, the assumption being made that differences in sample size did not affect the representativeness of the samples and introduce bias.

1. Description of the Student Sample

The student sample consisted of 36 participants with an age range between 16 years and one month and 18 years and eight months. 16 were male and 20 were female, with one student being in the 10th grade, two in the 11th grade, and 33 were in the 12th grade.

2. Student Plans Following High School Graduation

Two of the questionnaire items were directed at assessing the students' plans following high school graduation on both Student Questionnaire I (SQ I) and Student Questionnaire II (SQ II). The first item was

direct in nature and the pre and post findings are reported in Table 2.

Table 2. Student Intent After Completion of High School

Response Category	% of Response to SQ I	% of Response to SQ II
Attend school full time	50	43
Work full time	3	0
Attend school and work	47	52
Not sure	0	5

The second item tapped student plans after high school graduation more indirectly by asking students to list the types of jobs they would seek if they were planning to assume a full or part time job upon completion of high school. The findings are reported below in Table 3.

Table 3. Students Listing Jobs They Would Seek After High School

Listing of Jobs	% of Response to SQ I	% of Response to SQ II
Yes	92	76
No	8	24

The results are somewhat ambiguous, but the large majority of students (over 90 percent) clearly plan to continue their education following the completion of high school with about 50 percent intending to work at least part time following high school graduation.

Even many of those students that indicated that they planned to attend school full time appear to be considering possible job opportunities while in school since 92 percent of the sample listed jobs they might seek. However, following their work experience/exploration experience a lower percentage (76%) of students listed jobs, suggesting further crystalization of their post high school graduation plans.

3. Helpfulness of School Learning in Work Experience Placement Performance

Both students and supervisors rated the degree to which they expected school learnings would be helpful to performance in the work experience placement prior to the students starting in their assignments, and both were asked to make similar ratings upon the students' completion of their assignments. The results are summarized in Table 4.

Table 4. Ratings of Helpfulness of School Learning in Work Experience Performance Before and After Work Experience

Response Category	Percent of Response			
	Students Before	Students After	Supervisor Before	Supervisor After
Very Helpful	33	10	39	40
Fairly Helpful	28	38	9	20
Somewhat Helpful	31	29	48	20
Not Helpful	8	23	4	20

While the before and after ratings of the supervisors reflect no shift in the very helpful rating category, there was a marked shift among students with 33 percent expecting to find their school learning very helpful but only 10 percent rating it as very helpful following actual work experience. There was also a marked shift in before and after ratings of students and supervisors with respect to school learning not being helpful in the work experience placement, with a high percentage of both students and supervisors viewing school learning as less helpful in the placement

than they expected it would be. The shift among the student sample suggests that the students did acquire a better appreciation for the types of skills and knowledge required in the world of work, though they may be dissappointed in the discovery that their school experiences were not as relevant to the work environment as they anticipated.

4. Helpfulness of Outside Experience in Work Experience Performance

As with school learning, both students and supervisors rated the degree to which they expected outside of school experiences to be helpful to performance in the work experience placement prior to the students starting in their assignments, and both samples made similar a rating upon the students' completion of their assignments. These results are presented in Table 5.

Table 5. Ratings of Helpfulness of Outside of School Experiences in Work Experience Performance Before and After Work Experience

Response Category	Percent of Response			
	Students Before	Students After	Supervisors Before	Supervisors After
Very Helpful	49	20	48	12
Fairly Helpful	28	38	29	38
Somewhat Helpful	31	29	14	38
Not Helpful	8	23	9	12

These results reflect that both students and supervisors anticipated that outside of school experiences would be more helpful than they were judged to be following completion of the work experience. This finding, along with the finding in Section III, 3 indicates that the majority of the students felt considerably more prepared to assume work responsibilities than they actually were.

5. Likelihood of Students Seeking a Job in the Same Area as Their Work Experience

Students rated the likelihood of them seeking full time employment in the same field of work as they were placed both prior to starting their assignment and following its completion. Thier responses are reported in Table 6.

Table 6. Student Pre and Post Ratings of Seeking Full Time Employment in Work Experience Field

Response Category	Percent of Response	
	Before Assignment	After Completion of Assignment
Very likely	60	38
Fairly Likely	17	24
Somewhat Likely	17	10
Not Very Likely	6	28

The findings in Table 6 clearly show that a large percentage of the students changed their opinion about possibly seeking full time employment in the work experience area as a consequence of the opportunity to have some experience working in a job. It might be assumed that the work experience assignment enabled students to better assess their own needs in relation to the world of work.

6. Supervisors' Opinion Regarding Students' Ability to Obtain Employment in Work Experience Area

Supervisors rated the likelihood of students being able to obtain full time employment in the work experience area with either the cooperating organization or another company upon completion of school. These ratings are presented in Table 7.

Table 7. Supervisors' Ratings of Students' Ability to Obtain Full Time Employment in Work Experience Area

Response Category	Percent of Response			
	Before Starting Work		After Completion of Assignment	
	With Their Company	With Another Company	With Their Company	With Another Company
Very Likely	45	22	28	14
Fairly Likely	14	56	33	57
Somewhat Likely	23	22	28	29
Not Likely	18	0	11	0

These findings suggest several things. First, supervisors were more optimistic about students being able to assume or obtain work in the field before placement than following placement. Second, they also became less pessimistic about students not being likely to obtain work in the placement area following completion of assignment than prior to it. Third, the students' opportunity to participate in a work experience situation with a particular company enhances the probability that the student will be able to obtain full time employment at a later date with that company.

7. Student Satisfaction and Enjoyment with Work Experience

Both students and supervisors rated the extent to which students would find the work experience satisfying and enjoyable prior to the students starting in their assignments, and both samples made a similar rating upon the students' completion of their assignments. These results are presented in Table 8.

Table 8. Ratings of Student Satisfaction with Work Experience Before and After Work Experience by Students and Supervisors

Response Category	Percent of Response			
	Students Before	Students After	Supervisors Before	Supervisors After
Very Enjoyable	61	52	30	20
Fairly Enjoyable	36	28	43	60
Somewhat Enjoyable	3	10	22	10
Not Very Enjoyable	0	10	5	10

The findings in Table 8 reflect an interesting discrepancy between student expectations and supervisors' prediction of student degree of enjoyment. Students expected to find their work experience more enjoyable than their supervisors thought they would, and students, in fact, found it more enjoyable than their supervisors thought they did. In short, it seems that students found their work experience, on the whole, more satisfying than their supervisors realized.

8. Student Before and After Ratings of Their Preparedness To Assume Full Time Employment

Students were asked to rate the extent to which they were prepared to assume full time work prior to starting work experience assignment and following completion of their assignment. Results are summarized in Table 9.

Table 9. Student Self Rating of Degree of Preparedness to Assume Full Time Employment Before and After Work Experience

Response Category	Percent of Response	
	Before Placement	After Placement
Very Ready	36	38
Fairly Ready	39	33
Somewhat Ready	11	10
Not Very Ready	4	19

The only finding of interest is that there was a higher percentage of students realizing as a consequence of their work experience that they were relatively unprepared to enter the world of work. This is not surprising and in all likelihood a valuable realization for the students since 39 percent of them had virtually no work experience prior to participating in this program.

9. Supervisors Degree of Satisfaction with Student Performance

Both students and supervisors rated the extent to which the supervisor would be satisfied with student performance prior to the students starting in their assignments, and both samples made a similar rating upon the students completion of their assignments. The results are summarized below in Table 10.

Table 10. Ratings of Supervisors' Satisfaction with Student Performance Before and After Work Experience by Students and Supervisors

Response Category	Percent of Response			
	Students Before	Students After	Supervisors Before	Supervisors After
Very Satisfied	72	75	66	70
Fairly Satisfied	25	10	26	10
Somewhat Satisfied	0	15	4	20
Not Very Satisfied	3	0	4	0

It can be concluded from these findings that there was a high degree of congruency between both student and supervisor expectations and the outcomes, with students expecting that their supervisors would, on the whole, be satisfied with their performance and supervisors, on the whole, indicating a high degree of satisfaction with student performance.

10. Supervisors Opinion of the Usefulness of Work Experience Programs in Preparing Students to Assume Full Time Employment

Supervisors rated the degree of usefulness of work experience programs in preparing students to assume full time employment in the specific job assignment and in general prior to actual student placement and upon completion of work placement. The results are presented in Table 11.

Table 11. Supervisors' Ratings of Work Experience Program in Preparing Students for Full Time Employment in General and for Specific Assignment

Response Category	Percent of Response			
	General Work Preparation		Preparation in Placement Area	
	Before	After	Before	After
Very High	23	30	33	60
Fairly High	32	50	33	30
Somewhat High	45	20	10	10
Low	0	0	24	0

These findings clearly indicate that the supervisors were of the opinion that the work experience was considerably more valuable in preparing students to assume full time employment (general and specific work preparation) than they had anticipated prior to the students entry into the work experience assignment.

11. Extent to Which Work Experience Program is of Service to the Student and Cooperating Organization

Supervisors rated the extent to which they thought the work experience program would be of service to participating students and their company prior to student assignment and upon completion of the assignment. The results are presented in Table 12.

Table 12. Supervisors' Ratings of the Service of Work Experience Program to Students and Their Organization

Response Category	Percent of Response			
	Service to Student		Service to Organization	
	Before	After	Before	After
Very High	19	72	29	86
High	57	14	29	0
Average	19	14	24	14
Low	5	0	14	0
Very Low	0	0	4	0

In examining the before and after rating of supervisors for the very high response category, it must be concluded that inspite of the supervisors initial opinion being guarded about the program having an extremely high degree of value to both students and their company, most supervisors were of the opinion following the student assignments that this program was extremely beneficial for both the student and their company.

12. Student and Supervisor Opinion of the Value of Providing Work Experience to Other Students In the Future

Supervisors were asked to rate the extent to which they favored work experience programs prior to student assignment and following completion of work experience assignment. Students were asked following the completion of their assignment the extent to which they favored such a program. These findings are summarized below in Table 13.

Table 13. Supervisor and Student Ratings on Value of Work Experience Program

Response Category	Percent of Response		
	Students	Supervisors	
	After	Before	After
Very Strongly in Favor	81	52	80
Somewhat in Favor	19	38	10
Mildly Opposed	0	5	10
Very Opposed	0	5	0

These findings show that the overwhelming majority of students (81 percent) and supervisors (80 percent) are very strongly in favor of the work experience program after having participated in it. It is also noteworthy that supervisors clearly showed a marked shift in the direction of being very strongly in favor of the program following participation in it.

13. Supervisors' Ratings of How the Work Experience Program Benefited Their Company

Supervisors responsed to four items by answering "yes," "no," or "no opinion" with respect to how the work experience program benefited their company. These responses are summarized below:

		Yes	No	No Opinion
1.	Recruited new personnel	25%	50%	25%
2.	Attained closer contacts and communication with academic institutions	63%	25%	12%
3.	Provided opportunity to screen trainees, leading to a reduction in employee turnover	0%	50%	50%
4.	Released other employees from the more basic work tasks	38%	38%	24%

Thus, supervisors felt that the primary value to their company was the opportunity to attain closer contact and communication with academic institutions. Next most beneficial was that the students freed up other employees from more basic tasks. Thirdly, it provided the company with an opportunity to recruit permanent personnel.

14. Student and Supervisors' Recommendations on How Work Experience Program Might Be Modified to Make it Even More Valuable to Participating Students and Companies

Students listed ways in which the program could be improved. Their recommendations ranked in terms of the frequency of times mentioned were as follows:

- Provide students with a wider range of exposure to different job activities in the work experience placement

- Students should receive some pay or the opportunity secure a job with the company in which they are placed
- The school should provide them with better preparation for the job prior to be placed
- The work experience program should be longer in duration so they have a greater work experience opportunity
- The school should arrange it so their schedule is more flexible, perhaps through providing them with credit for the work experience which would lighten their academic schedule
- The students felt that recruitment should include a broader range of students, rather than favoring honor students for inclusion

The participating supervisors indicated that the following changes would improve the program:

- The program should be longer in duration so they could provide the students with a broader range of experiences
- The school should do a more thorough job of preparing the students for the work experience responsibilities
- They should be provided with greater background information on the student such as a brief resume
- There should be ongoing consultation between the school counselors and the supervisor during the students' placement

By and large, the students and supervisors are in agreement on how to improve the program, especially with regard to the issues of better preparing the students for their assignments and extending the length of the program so that the students could be exposed to a broader range of work experiences in their placement.

IV. Summary of Evaluation Findings

1. Students saw school learning as less helpful in work experience placement than they anticipated it would be. To a lesser extent, supervisors viewed the usefulness of school learning similar to the students.

2. Both students and supervisors found experiences outside of the school context as less helpful in job performance than they anticipated.

3. As a consequence of their work experience placement, a high percentage of students decided that they would not seek a job in the same area as they were placed, suggesting that the work experience enabled students to better assess their own needs in relation to the world of work.

4. Supervisors were more optimistic about students being able to obtain work in their area of placement experience after their experience with the students than before students were placed.

5. Students expected to find their work experiences more enjoyable than their supervisors thought they would, and the students found them more enjoyable than their supervisors thought they did.

6. A higher percentage of students realized as a consequence of their work experience that they were less prepared to enter the world of work than they thought they were before the work experience.

7. On the whole, supervisors of cooperating organizations were very satisfied with the students' job performance.

8. Supervisors were of the opinion that the work experience was considerably more valuable in preparing students for the world of work than they had anticipated it would be prior to the students' entry into the work experience assignment.

9. Inspite of the supervisors' initial opinion being guarded about the program having an extremely high degree of value to both the students and their company, most supervisors were of the opinion following the student assignments that this program was extremely beneficial for both the students (72 percent) and their company (86 percent).

10. Eighty percent of the supervisors indicated that they were very strongly in favor of the work experience program after being involved in it, while only 52 percent were very strongly in favor of it prior to involvement.

11. Eighty-one percent of the students were very strongly in favor of the work experience program.

12. Supervisors indicated that the major value of the program resided in the opportunity to attain close contact and communication with academic institutions.

13. Both students and supervisors of cooperating companies indicated that the program would be more effective if (1) the school did a better job of preparing the students for their placement and (2) by extending the length of the program so that the students could be exposed to a broader range of work experiences in their placement.

TITLE: A SUMMATIVE EVALUATION REPORT OF THE CALDWELL COUNTY GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROGRAM.

PERSONAL AUTHOR: TUTTLE, RON

DESCRIPTOR: *PROGRAM EVALUATION; SUMMATIVE EVALUATION; STUDENT TESTING; SECONDARY EDUCATION; *JOB PLACEMENT; *GUIDANCE PROGRAMS; INSTRUCTIONAL MATERIALS; *WORK EXPERIENCE PROGRAMS; *COOPERATIVE PROGRAMS; GRADUATE SURVEYS; COUNTY SCHOOL SYSTEMS; RURAL AREAS; DROPOUT IDENTIFICATION

IDENTIFIER: CALDWELL COUNTY; NORTH CAROLINA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 117P.; RELATED DOCUMENT VT 103 369 IN THIS ISSUE. APPENDIX A AND PAGE 100 CONSISTING OF A BUDGET SUMMARY CHART WERE NOT REPRODUCIBLE AND WERE REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION.

ABSTRACT: THE THIRD PARTY EVALUATION WAS CONCERNED WITH BOTH PROCESS AND PRODUCT EVALUATION. BASED ON SITE VISITATIONS, SUMMARY REPORTS ARE PRESENTED OF PROCESS EVALUATIONS OF THE CAREER GUIDANCE, JOB PLACEMENT, AND WORK EXPERIENCE PROGRAMS, AND THE CURRICULUM MATERIALS FOR THE INDUSTRIAL COOPERATIVE TRAINING PROGRAMS. THE PRODUCT EVALUATION ENTAILED THE ADMINISTRATION OF THE MINNESOTA VOCATIONAL INTEREST INVENTORY AND THE TENNESSEE SELF-CONCEPT SCALE AS PRETESTS AND POSTTESTS TO EXPERIMENTAL AND CONTROL GROUPS OF STUDENTS. RESULTS OF THE ANALYSIS OF TEST SCORES ARE DISPLAYED IN TABLES. ALSO PRESENTED ARE RESULTS OF A FOLLOWUP SURVEY OF 196 GRADUATES OF THE FIVE HIGH SCHOOLS. MAJOR CONCLUSIONS ARE THAT THE OBJECTIVE OF ESTABLISHING A COMPREHENSIVE CAREER GUIDANCE AND JOB PLACEMENT PROGRAM HAS BEEN ATTAINED, THE OBJECTIVE OF ESTABLISHING A MODEL WORK EXPERIENCE IN TEXTILES AND FURNITURE MANUFACTURING HAS BEEN INITIATED AND IS UNDERWAY, AND PROGRESS ON THE LEARNING ACTIVITY PACKAGES HAS BEEN EXCELLENT. THE INCREASE AND DECREASE OF STUDENT INTEREST IN OCCUPATIONAL FIELDS AS A RESULT OF PROGRAM PARTICIPATION IS SUMMARIZED. APPENDED ARE THE EVALUATION CONTRACT, INSTRUMENTS USED FOR PROCESS EVALUATION, THE OCCUPATIONAL SURVEY QUESTIONNAIRE, AND A DESCRIPTION AND ANALYSIS OF THE DROPOUT IDENTIFICATION SYSTEM. INADEQUATE READING ABILITY WAS FOUND TO BE THE SINGLE GREATEST CONTRIBUTOR TO DROPOUT POTENTIALITY. (RG)

During September, 1974, Mr. Bill Stone, Director of the Caldwell County Guidance Oriented Alternative Work Experience Program, contacted Dr. Ron Tuttle concerning the possibility of Appalachian State University's serving as a third party evaluator of the above mentioned program. During the next several weeks joint meetings were held between officials of Appalachian State University and the Caldwell County Guidance Oriented Alternative Work Experience Program for the purpose of drawing up an evaluation contract between the two agencies. Attending these meetings along with Mr. Stone and Dr. Tuttle were Mrs. Marty Barnes, Career Counselor for the Caldwell County Program; Dr. Gerald Bolick, Director of the Division of Community and Regional Services at Appalachian State University, and Ms. Ellen Walters, a coordinator in the Division of Community and Regional Services at A.S.U. A contractual agreement between Appalachian State University and the Caldwell County Board of Education was made and entered into on October 17, 1974. This agreement called for a third party evaluation of the Caldwell County Guidance Oriented Alternative Work Experience Program by A.S.U. A copy of this contract is contained in Appendix A of this report.

Dr. Ron Tuttle, Associate Professor in the Department of Counselor Education and Research at A.S.U., was named in the contract as evaluator of the Caldwell County program. Dr. Tuttle, Mr. Stone, and Mrs. Barnes met frequently throughout 1974 and 1975 to plan and execute the evaluation of the Guidance Oriented Alternative Work Experience Program.

OBJECTIVES OF THE GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROGRAM

The primary purpose of the project is to research a program designed to alleviate and overcome:

(1) Lack of communication between industries, businesses, and the public schools concerning needed changes in vocational-occupational training.

(2) High percentage of students trained in our schools in traditional occupational programs who do not remain on those jobs after graduation.

(3) Lack of adequate placement programs for students.

(4) Lack of a training curriculum developed by industry and public schools in the area of textile and furniture manufacturing for industrial cooperative training programs.

These problems are common to many areas of the nation. The project expects to accomplish the following benefits to deal with the above problems:

(1) Development of comprehensive career guidance programs within the county high schools.

(2) Establishment of a model county-wide job placement program to serve high school students in Caldwell County.

(3) Development of work experience programs in the area of textile and furniture manufacturing that will reduce requirements for more and more expensive occupational laboratories within our schools.

(4) Development of an individualized curriculum for industrial cooperative training classes.

This report will evaluate the following:

(1) The extent to which a comprehensive career guidance program has been developed within Caldwell County High Schools.

(2) The extent to which a model job placement program has been implemented to serve all high school students within the Caldwell County School System.

(3) The extent to which model work experience programs have been established in the areas of textile and furniture manufacturing that will provide both the skill, development, and job climate necessary to achieve and maintain meaningful employment in local industries.

(4) The extent to which a follow-up study of the work experience students, regular I. C. T. students who were randomly selected in the control groups, and all 1974-75 high school graduates of Caldwell County Schools has been established in order to determine the success of these people in terms of salary, job mobility, etc.

PROCESS EVALUATION

Procedure

During February, 1975, a third-party visitation team was chosen. This team included expert educators in the fields of job placement, career guidance, and work experience programs and was made up of the following persons:

Career Guidance and Job Placement

(1) Ms. Joann Horton, Assistant Director, Placement and Career Development, Appalachian State University, Boone, North Carolina.

(2) Dr. Ed Harrill, Associate Dean, College of Learning and Human Development, Appalachian State University, Boone, North Carolina. (Dr. Harrill is also Professor of Counselor Education at A.S.U.)

Work Experience Programs

(1) Mr. Claude F. Eldridge, Director, Occupational Education, Surry County Schools, Dobson, North Carolina.

(2) Mr. Arnold Lingle, Director, Occupational Education, Rowan County Schools, Salisbury, North Carolina.

(3) Mr. Al Stuckey, I.C.T. Coordinator, Hickory High School, Hickory, North Carolina.

During March, 1975, the members of this evaluation team were contacted to confirm the date of April 16, 1975 as the day for their visitation. During early April each member of the team was sent an information packet containing the following:

(1) A cover letter

(2) A schedule of the day's activities for the visitation on April 16, 1975 (See Appendix B)

(3) Brief descriptions of the program (See Appendix C and pages 1-5 of the evaluation proposal in Appendix A)

(4) Evaluation forms to be used in evaluating career guidance and job placement (Appendix D) and work experience (Appendix E)

On April 16, 1975, the visitation committee spent the day visiting the Caldwell County Guidance Oriented Alternative Work Experience Program generally following the schedule mentioned earlier. At the close of the day, the committee met as a group and issued the following overall evaluation of the program.

Arnold Lingle

Mr. Arnold Lingle, Director
Occupational Education
Rowan County Schools
Salisbury, North Carolina

OVERVIEW

The Administration of Caldwell County is aware of the career guidance needs of students in the county and had the foresight to attempt to meet them by developing this project. After funding, the selection of personnel was excellent in that they brought strengths to the program.

I. Strengths

A. Rapport between coordinators and industry and business is excellent.

B. Rapport between guidance personnel and central administration is good.

C. Administrators (principals) were supportive.

D. Progress on Learning Activity Packages to date has been excellent and should continue.

E. Placement program has positively affected student body - lowered attrition rate and created more positive attitudes for many.

F. The co-operation between school, advisory committee, staff, students, and business and industry is to be commended for their articulation of LAPS and training plans.

II. Weaknesses

The evaluation team is aware that the depressed economy has weakened the goals of the project.

A. Communication and dissemination of details of project is lacking within the school and the community.

B. Late initiation of the project contributed to guidance weaknesses, and enrollment difficulties for the target population during the 1974-75 academic year.

C. Lack of communication between industrial supervisors and student-learners.

D. Underutilization of some Industrial Cooperative Training personnel.

III. Recommendations

A. Administration should continue to support objectives of the project in order that it may be adequately researched and evaluated.

B. Local funds should be provided to ensure continued maintenance of instructional personnel.

C. The Placement Coordinators position should be extended from 10 months to 12 months. Each of the 3 proposed high schools should have one placement coordinator.

D. Continue the development and field testing of Learning Activity Packages and other curriculum materials.

E. Business and industry should be made aware of the limitations of a federal project.

F. The administration should consider the need for additional instructional materials.

Each of the members of the third-party evaluation team was also asked to complete an individual evaluation of the Guidance Oriented Alternative Work Experience Program. Members of the job placement and career guidance team completed the form found in Appendix D, and the members of the work experience team completed the form found in Appendix F. These evaluations were later mailed to the program evaluator and the results are summarized below.

Career Guidance and Job Placement

The questions and the responses of the committee were as follows:

1. One of the objectives of the Guidance Oriented Alternative Work Experience Project is the development of a comprehensive career guidance program in the Caldwell County high schools. To what extent has this objective been met?

   (a) A comprehensive Career Guidance program has been instituted in all five high schools in Caldwell County. A guidance coordinator has been employed by the school system; and as a result, a battery of materials has been developed for use within the schools in determining student needs, providing adequate information regarding agencies, testing materials available, developing education orientation packages as well as providing an opportunity for students to interact with persons in varied work areas. There is a high level of involvement by students, teacher-counselors, and principals.

   (b) From my vantage point in talking with the guidance counselors, there is awareness of the work which Mr. Duncan is doing in the area of Placement. There is also a repeated expression of appreciation of Mr. Duncan's time and talent, along with a desire that a placement counselor be at least twice that of Mr. Duncan now in the respective schools. Furthermore, there is expressed "relief" from the guidance counselors in that they have more time to do some of the other guidance functions other than placement. In these ways Objective I has been met.

2. What are the greatest strengths or most notable features of the career guidance program?

(a) Rapport between guidance personnel and central administration. Students have exhibited a high level of interest in career guidance.

(b) The excellent development of Learning Activity Packages (LAPS).

(c) The personality of Mr. Duncan.

(d) The thoroughness with which Mr. Duncan has worked with industries.

(e) The up-to-date knowledge that Mr. Duncan has and shares with guidance counselors regarding the local labor market.

(f) The overall acceptance of the placement service by the schools, the industries and seemingly the entire community.

(g) The statistical reporting which Mr. Duncan does to the various groups concerned.

(h) Decrease in high school drop-outs.

(i) Coordination with other groups such as 4-H clubs in the county.

3. What are the weakest or least adequate features of the career guidance program?

(a) Guidance weaknesses due to late initiation of the project along with enrollment difficulties for the target group for the 1974-75 academic year.

(b) Lack of total communication among guidance counselors and school personnel for implementing the goals and strategies of the entire project; this weakness comes despite numerous efforts of the central office.

(c) Lack of personnel; one half the number of schools which Mr. Duncan has would be more realistic.

(d) Lack of time for Mrs. Barnes to work in a greater liason capacity for the county.

(e) Lack of understanding by the respective faculties of the project and their involvement in the referral method.

4. What recommendations or changes would you suggest for the career guidance program?

   (a) Administration should continue program in order for it to be most effective.

   (b) The development of Learning Activity Packages should be continued and tested in order to ascertain their effectiveness.

   (c) More information should be circulated among the administrators and guidance personnel throughout the newly consolidated system.

   (d) The good work begun with the test results should be continued in the areas of special abilities tests such as the DAT and achievement tests.

   (e) Plans should be made with counselors, project personnel and curriculum personnel for implementing changes in curriculum based upon tests and other empirical results.

5. Other comments or observations about the career guidance program.

   (a) There is a need for some specialized career guidance for persons who are returning to school or who have special problems. Group meetings between staff involved would promote more dissemination and articulation of careers information.

   (b) There should be regularly scheduled county-wide guidance meetings, say every six weeks, for the purpose of disseminating information, engaging in county-wide planning, and improving articulation.

   (c) All guidance counselors should be encouraged either to use and/or learn skills which enable them to implement more group activities.

   (d) Each guidance counselor should be encouraged to submit a written proposal to the county office specifying strategies he/she would like to use to get more involvement of faculty and students in career and self exploration planning; Dr. Tuttle may assist in devising an evaluation methodology for next year's work.

   (e) A thorough in-house and third party evaluation of guidance programming, planning, staffing, and co-ordinating should be undertaken next year (1975-76) so as to include benefits

in the building, planning and personnel selection for the new schools which will merge within the next few years.

6. Another objective of the Guidance Oriented Alternative Work Experience Project is the implementation of a model job placement program to serve all high school students within the Caldwell County School System. To what extent has this objective been met?

   (a) A skeletal job placement program has been instituted in Caldwell County Schools with all five high schools involved. It appears that the program has served both the school and the community well. The program is highly successful in that the guidance personnel are committed to educating for careers. A number of businesses have been involved, and the placement coordinator keeps abreast of all openings, conducts interviews, makes referrals, and has periodic conferences with principals and teachers. A booklet entitled "Guide to Getting a Job" is in process. A major part of the work is being contributed by students whose involvement is growing.

   (b) I feel this objective has been well met.

7. What are the greatest strengths or most notable features of the job placement program?

   (a) The experience of the placement coordinator is a strong element in the success of the program.

   (b) Working relationship of placement coordinator and guidance personnel is good.

   (c) There is a high level of student interest and participation.

   (d) A lower attrition rate and creation of more positive attitudes toward school and work is evident.

   (e) This program is a positive link between the school and the community.

   (f) Rapport between coordinators, business, and industry is excellent.

   (g) The number of students placed in jobs has been commendable although the economic conditions are very poor in Caldwell County.

8. What are the weakest or least adequate features of the job placement program?

   (a) At the current time, the placement coordinator spends only one day per week at each school; it is evident that there is interest in and need for another placement person.

   (b) There were possibilities for detection of subtle discrimination in regard to sex (no woman in horticulture, e.g.) race and socio-economic status in film.

   (c) There was little communicated information to evaluators of how placement service assists in extending itself beyond parochialism.

9. What recommendations or changes would you suggest for the job placement program?

   (a) Program should be expanded to two placement coordinators in order to better serve the student clientele. In addition, the placement coordinator's position should be extended from 10 months to 12 months.

   (b) Each of the proposed new high schools should have one placement coordinator.

   (c) Some out-of-county exploration trips should be taken for the following purposes: to gain more and broader information, to provide broader bases for decision-making and to find new ways to explore, in depth or on an individual basis, vocations such as herpetologist, forest ranger, seismologist, e.g.

   (d) That State Department personnel should be utilized more in assisting with information dissemination.

10. Other comments or observations about the job placement program.

   (a) There is a need for a systematic follow-up in order to ascertain how many students remain in positions after graduation.

   (b) This is a good project, one worthy of publicizing. It is recommended that you now concentrate on refining the "model" concept via your overall objectives and specific strategies, all produced material, written and otherwise, and demonstrations which you could have and encourage outsiders "to come to see us and learn."

Work Experience Programs

The questions and the responses of the committee were as follows:

1. One of the objectives of the Guidance Oriented Alternative Work Experience Program is to establish model work experience programs in the areas of textiles and furniture manufacturing that will provide both the skill, development, and job climate necessary to achieve and maintain meaningful employment in local industries. To what extent has this objective been met?

   (a) Progress toward this objective was initiated and well under way as the 1974-75 school year began. However, since the beginning of the project the economic conditions in Caldwell County have turned from practically no unemployment to nearly 25% unemployment as of April, 1975.

   (b) The program is well planned and the extent of progress to meet this objective will most surely accelerate as economic conditions improve. It is a sound program with excellent administration.

   (c) The objectives of the guidance oriented work experience in the furniture manufacturing program is definitely being met. The model program has been initiated and is functioning properly and according to plans.

   (d) The model program is designed so that students are receiving skill development within an atmosphere conducive to a good training situation, being on the job. The training situation is within the furniture establishment, and the students are receiving remuneration for their service.

   (e) The job climate is such that the students are happy and realizing success. This is very important at this stage of their educational development.

   (f) Considering the limitations imposed upon the program by the late funding and the subsequent drastic reduction of the local industrial economy, it is evident that this objective has been met to a substantial degree.

   (g) The administrative personnel of the secondary school system of Caldwell County, North Carolina, appear to have an insight and awareness of the career needs of the students. They have selected capable personnel to head this work experience program and have given those personnel support and the necessary freedom in their actions to implement the program requirements.

2. What are the greatest strengths or most notable features of the alternative work experience program?

   (a) Administrative staff is well organized and functioning well.

   (b) There is excellent rapport between coordinators, business and industry.

   (c) Progress on Learning Activity Packages to date has been excellent.

   (d) Placement program has positively affected student body.

   (e) Attrition rate has been lowered and more positive attitudes have been developed.

   (f) The cooperation between school, advisory committee, staff, students and industry is good.

   (g) Program has contributed to improved cooperation between industries.

   (h) In times of normal and high production, this program provides an excellent source of employment.

   (i) The leaders of the program are aware of the needs of these students and care about them.

   (j) The leaders of the program have involved the community and home in an educational partnership.

   (k) Management is participating for various reasons such as: long-range skills, happy employee, involvement the community and school.

   (l) The school administration is aware of the needs of these students beyond the regular curriculum.

   (m) Student attitudes have improved.

   (n) Student personal image has improved.

   (o) Students are appreciative.

   (p) The two Industrial Cooperative Training teacher-coordinators are enthusiastic.

(q) The Textile Advisory Committee has cooperated and offered positive assistance.

(r) There is rapport between coordinator (textile) and industrial supervisor.

(s) A good relationship appears to exist between the guidance personnel and the central administrative personnel.

(t) The principal of Granite Falls High School, where the textile program was instituted, has given his cooperation and support.

(u) Some excellent training station situations for future on-the-job training of student-learners have been established.

(v) Hazardous occupation guidelines have been established for use in student employment in the local textile industry (previously these had varied from plant to plant).

(w) Specific vocational guidance has been promoted within the school system.

3. What are the weakest or least adequate features of the alternative work experience program?

(a) The depressed economy has been the greatest detaining factor on the progress of the program.

(b) There has been under-utilization of some ICT personnel.

(c) There has been a lack of communication among all teachers within the school concerning the needs of students having problems either physically, socially, mentally or educationally.

(d) The late funding of the program prevented the proper student testing, guidance, and selection, thus hampering the placement and retention of students on the job.

(e) Industrial Cooperative Training teacher-coordinators appeared to need more help in preparing training plans for students.

(f) A major weakness, potentially, is the possibility of a cut in funding for the subsequent year, which would leave the programs with inadequate support.

(g) The interest test given the pre-high schoolers, as well as some of the other tests administered, did not appear to meet the needs of the local students or the local industry; categories were too general in nature.

(h) Some on-the-job supervisors did not understand cooperative work program or communicate well with the student-learner.

4. What recommendations or changes would you suggest for the alternative work experience program?

(a) Extensive guidance and screening should be conducted in the spring of 1975 for the 1975-76 academic year.

(b) Each of the three proposed high schools should have a placement coordinator.

(c) The need for additional instructional materials and equipment should be considered.

(d) The development and field testing of LAPS and other curriculum materials should be continued.

(e) An extra hour of in-school experiences should be provided for certain trainees who are unemployed due to present economy.

(f) The school administration and industry should continue to support this program and other similar programs in order to give students an opportunity to achieve success under actual live training situation.

(g) The program should provide coordinating personnel on a full time basis year round. (This type of student has problems in the summer on the job, as well as during the school term.)

(h) This program needs individualized instructional materials.

(i) Industry needs to provide opportunities for more students.

(j) The activities of this program should be publicized within the school, newspaper, radio and T.V.

(k) An Industrial Cooperative Training program is needed in this school.

(l) Administration should insure that student recruitment, testing, counseling and selection be made at an early date and that the teacher-coordinator be permitted final approval on selections; that specific criteria be used as basis for selections.

(m) Personnel should be used to provide more help at the actual teaching level.

(n) Administration should make every attempt possible to obtain local "matching" funding sufficient to maintain the program at its first year level and/or advise local industry of the limitations of a federally sponsored program.

(o) Research and evaluation of testing procedures should be continued.

(p) Advisory committees should be asked to formulate better methods for orientation of supervisors of working student-learners, perhaps through talks by the coordinator-teachers.

5. Other comments or observations about the alternative work experience program.

(a) Business and industry should be kept aware of the limitations of a federal project.

(b) Local funds should be provided to ensure continued maintenance of instructional personnel.

(c) Administration should continue to support objectives of the program in order that it may be adequately researched and evaluated.

(d) Comprehensive career guidance programs in the high schools should be developed.

(e) The ICT program is a valuable asset to local industries. Efforts should be continued to articulate information on this program between staff, students and industrial leaders so that the potential value of the program will be fully realized and utilized.

(f) The alternative furniture work experience program is a tremendous boost to the educational curriculum. Other educational units should initiate a program of this nature or similiar nature in order to meet the needs of many

students who are not mentally, physically, socially, emotionally or economically able or prepared to meet the demands of our present system of education.

(g) This program obviously has been well supervised and effectively operated. It has accomplished many of its objectives in spite of two major but unavoidable handicaps--the late start and the severe recession. The latter, particularly, has adversely affected the student placement and on-the-job training. It has, however, benefitted one aspect of the program--the assimilation and writing of LAPS, training plans and other teaching materials. Without the time made available by student unemployment, the cooperative work teacher-coordinators would not have been able to accomplish the fine work in this area that they did.

6. The Guidance Oriented Alternative Work Experience Project has developed learning activities packages for the Industrial Cooperative Training curriculum. What is your evaluation of these curriculum materials?

(a) The staff involved in the development of Learning Activity Packages are commended for the progress made at this point in time.

(b) The job description sheets for textiles are seemingly helpful and serve as good instructional aids in the ICT program.

(c) The implementation process of using LAPS seems to be well administered by the staff.

(d) The guidance oriented alternative furniture work experience learning activities packages which have been developed are good. The long range objectives of the classroom portion of the program is very realistic. In order to meet the needs of the students training on the job there is a definite need for classroom activities. Learning certain economical phases of the job will make training more enjoyable and profitable.

(e) This is probably one of the weakest areas in most Industrial Cooperative Training programs--the shortage of teaching materials, especially trade related, and adequate training

plans. I feel the development of teaching materials and training plans in two industrial areas, textiles and furniture, is the strongest asset of this pilot program and that the results obtained, provided the program is permitted to continue for three years, will be of great benefit to all ICT programs where textile and furniture employment is available.

7. What are the most outstanding or notable features of the ICT curriculum materials?

   (a) Much enthusiasm is exhibited by the staff in the development and in the use of the LAPS.

   (b) The students have a choice of materials in their areas of interest.

   (c) Materials on specific job descriptions and training plans were jointly developed by industry representatives, students, and staff.

   (d) Curriculum materials are readily available for student use.

   (e) Rapport between the ICT coordinators and media staff is evidenced by the various learning experiences set up in the curriculum materials.

   (f) The planning and organization of the curriculum is good.

   (g) Industry and the community were involved in developing the guides.

   (h) The format is simple and yet workable in learning situations.

   (i) An advisory committee was established to help with technical information.

   (j) Training plans in textiles (furniture not seen) appeared to be well organized, complete and encompassing most of the possible textile training positions.

   (k) Learning activities packets appeared to be practical, comprehensive and written at the potential student level of understanding.

8. What are the weakest or least adequate features of the ICT curriculum materials?

   (a) The materials need to be expanded as time and funds will allow.

   (b) Materials are not as much help to students this academic year since the LAPS and other aids have been in the developmental stage.

   (c) The greatest need is seemingly in the area of "hardware" and "software" to reinforce the effectiveness of the LAPS material. Items such as tape cassettes, film strips, sound viewers, and other audio visuals would be extremely helpful to some students and very supplemental to the learning activities of every ICT student.

   (d) There is a lack of resource materials to develop guides (LAP).

   (e) There is a lack of time and personnel to develop the guide.

   (f) There is a lack of secretarial help in locating resource material and printing.

   (g) Some of the materials used appeared to be more fitting for an exploratory level student; these were principally purchased materials.

9. What recommendations or changes do you suggest for the ICT curriculum materials?

   (a) LAPS should be up-dated as the need arises and new trends develop.

   (b) Students and industrial representatives should be involved as much as possible in the process of continual evaluation and reassessment of LAPS activities and written content.

   (c) The LAPS approach should be reinforced by including more "hands-on activities," "hardware" and "software" in the learning package units.

   (d) Periodic conferences with previous and present instructors should be held to prevent undue overlapping of some materials.

(e) The staff should continue to develop the learning activity packages as rapidly as possible to insure students a thorough knowledge of the job tasks.

(f) The administration should purchase resource materials needed to develop LAPS.

(g) The administration should budget funds to enable technical writers to publish materials written.

(h) The administration should budget funds to employ the ICT coordinator on 12-month basis in order to further develop LAPS and follow-up students during the summer months.

(i) The staff should survey the ICT programs state wide for possible resource materials already developed along these same lines.

(j) The administration should continue to develop new materials.

(k) More emphasis should be placed on guidance personnel or aides to assist in developing general related and trade related materials.

10. Other comments or observations concerning the ICT curriculum materials.

(a) A more comprehensive selection of LAPS will (should) be available next year if present progress continues.

(b) The progress on LAPS has been excellent. It is hoped that this material can be made available to other school units in North Carolina.

(c) The cooperation between school, advisory committees, staff, students and industry is to be commended for their articulation of LAPS and training plans.

(d) My personal view of the entire Guidance Oriented Alternative Work Experience Project is that the program is great and the Caldwell County School System is doing a great job of meeting the needs of students that have been left behind for so long. Yet, these students will be our next door neighbors, our clerks in our stores, the mechanics who repair our cars, the ones who will build and wire our homes, protect our homes against fire and burglars, etc. The Caldwell County School

System has recognized the student who isn't motivated to pursue an education beyond the secondary level and who plays an important part in our community. These are the people who keep the wheels turning and provide the goods and service for a happy and prosperous community.

(e) These materials are a most important phase of this program.

(f) It is hoped that materials developed will be evaluated and disseminated to appropriate states and areas.

PRODUCT EVALUATION

Procedure

During October, 1974, the experimental and control groups for the evaluation were chosen and tested. The students participating in the Guidance Oriented Alternative Work Experience Program at Lenoir and Granite Falls High Schools comprised the experimental group. The control group was selected by securing the names of all students working in furniture and textile related jobs enrolled in regular industrial cooperative training classes from the four high schools where these programs existed. The number of available subjects in furniture totaled fifty-nine. In order to have each school represented, the only two furniture ICT students at Hibriten High School were automatically selected along with twenty other furniture ICT students selected at random from the remaining total of fifty-seven. Thus, twenty-two regular ICT furniture students were chosen to correspond to the twenty-two participants enrolled in the Guidance Oriented Alternative Work Experience Program in furniture at Lenoir High School.

The number of available subjects in textiles was forty-two. Again, in order that each school be represented, two of the four textile ICT students

at Hibriten High School were selected at random as well as two from the five textile ICT students at Gamewell-Collettsville High School. The remaining twenty-two subjects were chosen at random from the remaining textile ICT subject pool. Again, twenty-six textile students were randomly chosen to correspond to the twenty-six students participating in the Alternative Work Experience Program in textiles at Granite Falls High School. The final make-up of the control group by school may be found in Table I.

During October, 1974, both the experimental and control groups were administered the Minnesota Vocational Interest Inventory (MVII) and the Tennessee Self Concept Scale (TSCS). During May, 1975, the post-testing of the experimental and control groups was carried out. Several experimental and control subjects were lost in the post-testing for various reasons. Tables I, II, III, and IV present a summary of these reasons and the number of subjects tested in each of the groups.

TABLE I. SUMMARY OF THE NUMBER OF SUBJECTS PER CELL FOR THE ANALYSIS OF THE DATA.

	Pre-Test		Post-Test

Measuring Instruments

The Tennessee Self Concept Scale (TSCS) is based on the hypothesis that other factors being equal, the more positive a person's self concept, the more effectively the individual will function. This instrument was used to determine the extent to which the self perceptions of the students participating in the Guidance Oriented Alternative Work Experience Program were affected by their experiences in the program. The TSCS consists of 100 self descriptive items to which the examinee responds by means of a five-point scale ranging from "completely true" (of me) to "completely false" (of me). The examinee is asked to describe himself as he sees himself through his responses to the TSCS items.

The scores on the TSCS examined by this evaluation were:

1. Method of Self Definition Score (true/false ratio). This score indicates whether a person tends to agree or disagree regardless of item content.
2. Self Criticism Score. This scale is a measure of defensiveness.
3. Total Conflict Score. This score measures the total amount of conflict within the same areas of perception.
4. Total Self Concept Score (Total Positive). This is the most important single score on the scale. It reflects the overall level of self esteem. Persons with high scores tend to like themselves, feel that they are persons of value and worth, have confidence in themselves, and act accordingly. People with low scores are doubtful about their own worth, see themselves as undesirable, often feel anxious, depressed,

and unhappy and have little faith or confidence in themselves.

5. Identity Score. This is the "what I am" scale; the scale represents how the individual perceives himself or his basic identity.

6. Self Satisfaction Score. This is the "how I accept myself" scale; the score reflects the general self satisfaction of the examinee.

7. Behavior Score. This is the "how I act" scale; this score represents how the person perceives his own behavior.

8. Physical Self. Here the individual is presenting his view of his body, his state of health, his physical appearance, skills, and sexuality.

9. Moral-Ethical Self. This score describes the self from a moral-ethical frame of reference--moral worth, relationship to God, feelings of being a "good" or "bad" person, and satisfaction with one's religion or lack of it.

10. Personal Self. This score reflects the individual's sense of personal worth, his feeling of adequacy as a person and his evaluation of his personality apart from his body or his relationships to others.

11. Family Self. This score reflects one's feelings of adequacy, worth, and value as a family member. It refers to the individual's perception of self in reference to his closest and most immediate circle of associates.

12. Social Self. This is another "self as perceived in relation to others" category but pertains to "others" in a more general way. It reflects the person's sense of adequacy and worth in his social interaction with other people in general.

13. Certainty about Self Perception Score (distribution score). This score reflects the way in which a person distributes his responses over the five available alternatives of each item. It represents the certainty of a person's perceptions about himself.

14. Defensive Positive Scale. This scale measures defensiveness, but in a more subtle way than does the self criticism scale.

15. General Maladjustment Scale. This scale consists of 24 items which differentiate psychiatric patients from non-patients.

16. Psychosis Scale. This scale is based on 23 items which best differentiate psychotic patients from non-patients.

17. Personality Disorder Scale. These 27 items differentiate persons with personality defects and weaknesses from other groups.

18. Neurosis Scale. This scale of 27 items differentiates neurotic patients from non-patients.

19. Personality Integration Scale. These 25 items differentiate persons with integrated personalities from other groups.

20. Number of Deviant Signs. This score is a count of the number of deviant features on all other scores and is the TSCS's best indicator of psychological disturbance.

The Minnesota Vocational Interest Inventory (MVII) was used to determine the extent of change in the vocational interest of the participants in the program. The MVII is modeled after the widely used Strong Vocational Interest Blank, but uses tradesmen as the reference group rather than professional and business

occupations. There are 474 items grouped in threes or a total of 158 triads. From each triad the examinee is asked to indicate which activity he would most like to do and which activity he would least like to do. An individual's responses are compared with those of persons employed in particular occupations. The following occupations are included: milk wagon driver, stock clerk, baker, retail sales clerk, carpenter, warehouseman, painter, printer, hospital attendent, tabulating machine operator, food service manager, pressman, radio-TV repairman, sheet metal worker, truck driver, electrician, machinist, plumber, truck mechanic, plasterer, and Industrial Education Teacher.

A second set of scales has been developed by identifying areas that are related to each other. These scales are: sales-office, office work, food services, clean hands, health services, electronics, carpentry, outdoors, and mechanical. A third and more general scale of the MVII is the occupational cluster scores. These are: white collar--clerical, food orientation, construction trade, electronics, and blue collar--mechanical.

ANALYSIS OF THE DATA

The data was analyzed at the Appalachian State University Computer Center. The Multivariate Analysis of Variance (MANOVA) statistical program developed by the Clyde Computing Service of Miami, Florida was used. For each of the TSCS variables studied, the means, standard deviations, and gain scores were computed for the experimental and control groups from pretest to post-test. These results for the Tennessee Self Concept Scale may be found

in Tables V and VI. The experimental and control group results for each of the TSCS variables were analyzed by analysis of covariance to determine if there were any statistically significant differences. The covariance analysis was a one factor, two level design with the pretest scores being treated as covariates and post-test scores as criteria. The results of this analysis is found in Table VII. Using an alpha level of .05, no statistically significant differences were found between the experimental and control groups.

The Minnesota Vocational Interest Inventory results were also analyzed by the Clyde Multivariate Analysis of Variance statistical program. For each of the MVII variables studied, the means, standard deviations, and gain scores were computed for the experimental and control groups from pretest to post-test. These results may be found in Tables VIII, IX, X, and XI. The experimental and control group results for each of the MVII variables were compared by analysis of covariance to determine if there were any statistically significant differences. The covariance analysis was a one factor, two level design with the pretest scores being treated as covariates and the post-test scores as criteria. Table XII and XIII contain the results of this analysis. There were two measures in which there were statistically significant differences between the experimental and control groups at the .05 level of significance.

On the carpentry area scale the experimental group showed a decrease in interest of 2.80 while the control group increased in interest by 1.48. The F value of 6.242 was significant at the .015 level (Table XIII). The experi-

TABLE V. THE PRETEST AND POST-TEST MEAN SCORES ON THE TENNESSEE SELF CONCEPT SCALE FOR THE EXPERIMENTAL GROUP.

Psychosis	-1.66	- .55	1.11	1.303	.258
Personality Disorder	.69	- .04	.73	.322	.572
Neurosis	1.45	-2.32	3.77	.051	.822
Personality Integration	- .03	.29	.32	.914	.343
Deviant Signs	-4.14	-2.19	1.95	.755	.388

mental group's decrease was statistically significant when compared to the increase of the control. On the mechanical area scale of the MVII, the experimental group increased their interest by 2.00 as compared to an increase in the control of .02. This difference was statistically significant at the .05 level (Table XIII). The increased interest of the experimental group in the mechanical area was statistically significant as compared to the control. An increase on the mechanical area score indicates an interest in mechanical things, machine operation, and design; whereas a decrease on the carpentry area scale indicates less interest in carpentry and furniture making. Since the experimental group was not broken down into furniture and textile groups for analysis, it is impossible to determine which groups influenced these changes.

Although not significant at the .05 level, the F value of 3.221 (Table XII) calculated as a result of the analysis of the industrial education teacher occupational scale was significant at the .078 level. The large increase of 3.12 by the experimental group as compared to the .92 decrease of the control indicates an increased interest in this occupation by the experimental subjects. This finding suggests that the increased interest was a result of their experiences in the Alternative Work Experience Program and reflects favorably on the industrial education teachers in the program as job models.

Due to the economic situation during 1974-75, many of the participants in the Alternative Work Experience Program lost their jobs during the school year. This unavoidable situation undoubtedly had a negative effect upon the

program itself as was stated earlier in the process evaluation. In an effort to neutralize those effects an additional analysis of the data was undertaken. Only subjects who were employed in their jobs throughout the entire school year were analyzed for statistically significant differences.

The Tennessee Self Concept Scale results were reanalyzed using only those subjects who were employed throughout the school year. The results of this additional analysis are presented in Tables XIV, XV, and XVI. The one factor, two level analysis of covariance again yield no statistically significant differences between the experimental and control subjects on self concept.

The Minnesota Vocational Interest Inventory was also reanalyzed and the means, standard deviation, and gain scores may be found in Tables XVII, XVIII, XIX, and XX. Several statistically significant differences were found between the experimental and control group results for only those subjects who were employed throughout the 1974-75 school year. The decrease of 3.61 on the painter occupational scale by the experimental group as compared to the increase of 2.30 by the control were statistically different at the .025 level of significance (Table XXI). The F value of 5.406 indicates that the experimental group showed a significant decrease in interest in the occupation of a painter. A similiar decrease was noted for the experimental subjects on the hospital attendent occupational scale. The F value of 7.483 was significant at the .009 level (Table XXI). The 1.23 decrease by the experimental group was statistically different as compared to the 2.00 increase of the control.

On the area scales of the MVII there were two statistically significant differences found. The Alternative Work Experience students showed a statistically significant decrease on the health services and carpentry area scales at the .017 and .008 levels of significance respectively (Table XXII). The 2.92 decrease by the experimental group on the health services area scale was significantly different when compared to the increase of 1.60 by the control. The 4.93 decrease on the carpentry area scale was also significantly different when compared to the control group increase of 1.36. Thus the reanalysis of the data using only those subjects employed throughout the year produced decreases for the experimental group on the occupational scales of painter and hospital attendant and the area scales of health services and carpentry.

FOLLOW-UP STUDY

During the summer of 1975 a follow-up occupational survey of the Caldwell County graduating class of 1974 was conducted. The questionnaire in Appendix F was sent to 750 graduates. One hundred ninety-six or 26% were returned. The questionnaire return rate by school is listed in Table XXIII. The responses to the questionnaires were tabulated and the results summarized by school and for the entire county.

TABLE XXIII. RETURN RESULTS BY SCHOOL FOR THE FOLLOW-UP STUDY OF 1974 GRADUATES OF CALDWELL COUNTY SCHOOLS.

	Total Number of Graduates Contacted	Total Number of Returns	Percentage of Returns
Gamewell-Collettsville High School	109	21	19%
Granite Falls High School	113	26	23%
Hibriten High School	145	43	30%
Hudson High School	268	81	30%
Lenoir High School	115	[illegible]	22%
Total	750	196	26%

The results for Gamewell-Collettsville High School were as follows:

1. Fifty-two percent of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

2. Thirty-two percent enrolled in an institution of higher learning with the majority of students attending Appalachian State University and Caldwell Community College and Technical Institute.

3. None of the graduating class entered the military.

4. Ninety-four percent of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 4% felt that it offered little assistance or was totally worthless.

5. The majority of students felt that all departments had met their expectations.

6. Recommendations were to make the school curriculum:

   (19%) more academically oriented.
   (61%) more occupationally oriented.
   (19%) remain as it is.

7. Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

   a. There should be more occupational courses to prepare students who go directly to work after graduation.

   b. The school should have better teacher/student relations.

   c. The school should have better facilities and more materials for students to use.

   d. The school should be given more money so that the students would not have to spend so much time fund-raising for things that they need.

The results for Granite Falls High were as follows:

1. Thirty-eight percent of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

2. Sixty-four percent enrolled in an institution of higher learning with the majority of students attending Appalachian State University and Caldwell Community College and Technical Institute.

3. None of the graduating class entered the military.

4. Eighty-three percent of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 10% felt that it offered little assistance or was totally worthless.

5. The majority of students felt that all departments had met their expectations.

6. Recommendations were to make the school curriculum:

   (15%) more academically oriented.
   (42%) more occupationally oriented.
   (30%) remain as it is.

7. Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

   a. The school should get the students more involved in school system.

   b. The school should have more field trips and labs so students can put to use what they have learned.

   c. There should be more business courses for boys also.

   d. Teachers, principal, and students should learn to work together.

The results for Hibriten High School were as follows:

1. Forty-one percent of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

2. Fifty-nine percent enrolled in an institution of higher learning with the majority of students attending Appalachian State University, Caldwell Community College and Technical Institute, and University of N. C. at Chapel Hill.

3. One percent of the graduating class entered the military with most students going into the Navy.

4. Seventy-one percent of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 17% felt that it offered little assistance or was totally worthless.

5. The majority of students felt that all departments had met their expectations.

6. Recommendations were to make the school curriculum:

   (27%) more academically oriented.
   (44%) more occupationally oriented.
   (25%) remain as it is.

7. Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

   a. Teachers should work more with the students and have better understanding.

   b. The school should offer more occupational courses.

   c. The school should give more money to the music department.

The results for Hudson High School were as follows:

1. Forty-one percent of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

2. Fifty-five percent enrolled in an institution of higher learning with the majority of students attending Appalachian State University and Caldwell Community College and Technical Institute.

3. One percent of the graduating class entered the military with most students going into the Nary.

4. Seventy percent of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 18% felt that it offered little assistance or was totally worthless.

5. The majority of students felt that all departments had met their expectations.

6. Recommendations were to make the school curriculum:

   (23%) more academically oriented.
   (60%) more occupationally oriented.
   (14%) remain as it is.

7. Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

   a. The school should improve on overcrowded situations.

   b. Teachers should be more interested in their work and make the students more involved.

   c. The administration should give students more voice in school activities.

The results for Lenoir High School were as follows:

1. Twenty eight percent of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

2. Seventy-six percent enrolled in an institution of higher learning with the majority of students attending Appalachian State University, University of N. C. at Chapel Hill, and East Carolina University.

3. One percent of the graduating class entered the military with most students going into the Marines.

4. Seventy-six percent of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 12% felt that it offered little assistance or was totally worthless.

5. The majority of students felt that all departments had met their expectations.

6. Recommendations were to make the school curriculum:

   (44%) more academically oriented.
   (16%) more occupationally oriented.
   (36%) remain as it is.

7. Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

   a. There should be closer student/teacher relationships.

   b. There should be more activities for the students.

   c. All administrative personnel and faculty should strive for a better balance between leniency and discipline.

   d. There should be a greater variety of courses.

The results for the five Caldwell County high schools taken together were as follows:

1. Forty percent of the graduating class entered into employment after graduation with a salary of $2,500 - $5,000 per year.

2. Fifty-seven percent enrolled in an institution of higher learning with the majority of students attending Appalachian State University, Caldwell Community College and Technical Institute, and the University of North Carolina at Chapel Hill.

3. Less than 1% of the responding graduates entered the military.

4. Seventy-five percent of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 14% felt that it offered little assistance or was totally worthless.

5. The majority of students felt that all departments had met their expectations.

6. Recommendations were to make the school curriculum:

   (25%) more academically oriented.
   (49%) more occupationally oriented.
   (22%) remain as it is.

It must be remembered in examining the above data that the results are based on only those questionnaires that were returned. Those persons who chose to complete and return the questionnaires may not represent the 1974 graduating class population. The 26% return is also quite low in terms of making decisions based on this data.

PROJECT EXTENSION

During the summer of 1975, Mr. Stone, the Project Director, applied for and received an extension to the original grant proposal. This extension reduced the Project Staff to the Director, Research Assistant, Project Secretary, and Placement Coordinator from July 1, 1975, until June 30, 1976, when the project would be ended. No additional funds were allocated for evaluation during the extension period. Thus, the evaluator was unable to fund formal evaluations of the numerous products produced during the extension period. However, the accomplishments of the project during the extension period are quite noteworthy and are discussed below.

During the extension period a job placement booklet was developed and distributed to school districts across western North Carolina. A copy of this pamphlet may be found in the Project Report. Representatives from the Catawba, Wilkes, Cabarrus, Forsyth, Surry, New Hanover, and Iredell county schools have traveled to Caldwell County to see the job placement program in operation.

The individualized work experience materials were field tested during the extension period in Hibriten, Gamewell-Collettsville, Granite Falls, and Hudson High Schools in Caldwell County. As a result of the feedback received from the teachers and students, numerous revisions have been made in these materials. A copy of the individualized work experience materials may be found in the Project Report.

The project staff worked with Bernhardt Industries of Lenoir in developing a furniture training manual using sixty-three Bernhardt employees to assist in the effort. This manual was distributed to all industrial cooperative programs in Caldwell County and to the North Carolina State Department of Public Instruction. A copy of this document may be found in the Project Report. Bernhardt Industries also developed a proposal for a management training program for high school industrial cooperative students. The proposal was approved by the Caldwell County Board of Education and will begin with the 1976-77 school year.

In the area of career guidance, during the extension period the project concentrated on student drop-out identification and prevention. Dr. Kenneth Jenkins, former principal of North Miami Beach High School and currently, Assistant Dean of the College of Learning and Human Development at Appalachian State University, assisted in the development of a computerized drop-out identification system. This procedure enables a school system to compile already available educational data into a format that will identify those students who exhibit characteristics of the potential drop-out. The system also identifies the individual's areas of educational problems so that resources may be directed toward drop-out prevention. A description of the drop-out criteria may be found in Appendix G. During January, 1976, this procedure was used to identify 980 potential drop-outs in the Caldwell County Schools. The results of this analysis may be found in Appendix H.

The project also developed a publication "Responsibility of School Personnel for School Conduct, Behavior, and Discipline," which may be found in Appendix I. This brochure was developed to improve communications in the area of discipline.

SUMMARY AND CONCLUSION

Process Evaluation

(1) The objective of establishing a comprehensive career guidance and job placement program in the high schools of Caldwell County has been attained. Materials have been developed for use in the schools to determine student needs, to provide adequate information regarding agencies, to test materials available, to develop orientation packages, and to provide interaction between students and persons in various work areas. The placement coordinator has established a smoothly run and effective program; he keeps abreast of local job openings, conducts interviews, makes referrals, and has periodic conferences with teachers and principals.

(2) The objective of establishing a model work experience program in the area of textiles and furniture manufacturing has been initiated and is well under way. Unfortunately, the economic conditions in Caldwell County have gone from practically no unemployment in January, 1974, to 25% unemployment as of April, 1975. These factors have imposed uncontrollable variables upon the work experience model which have undoubtedly had a negative effect. It is important to stress, however, that the program staff has done an excellent job considering these restrictions.

(3) The project staff was effectively chosen so as to bring together an enthusiastic group of professionals possessing the diverse skills and knowledge required to get a program of this type functioning smoothly. The staff was a definite strength to the overall project.

(4) Excellent rapport and lines of communication have been established between local industry and the public schools of Caldwell County. The coordinators in furniture and textile were particularly effective in their communications and relations with local industry. Effective lines of communication were also formed between guidance personnel, principals, the central administration, advisory committees, staff, faculty, and students.

(5) The progress made on the Learning Activity Packages was excellent and should be continued.

(6) The late funding of the program prevented the proper student selection, testing, and guidance, thus hampering the placement and retention of students on the job.

Product Evaluation

(1) The students in the Guidance Oriented Alternative Work Experience Program displayed a decrease in interest in the occupational field of carpentry as a result of their experiences in the program.

(2) The students in the Work Experience Program displayed an increase in interest in the mechanical occupational fields as a result of their experiences in the program. They increased in interest in mechanical

things, machine operation, and design.

(3) The students in the Work Experience Program who were employed throughout the 1974-75 school year displayed a decrease in interest in the occupation of painter as a result of their experience in the program.

(4) The students in the Work Experience Program who were employed throughout the 1974-75 school year displayed a decrease in interest in the occupational field of hospital attendant as a result of their experience in the program.

(5) The Work Experience students who were employed throughout the 1974-75 school year displayed a decreased interest in the occupational areas of carpentry and health services as a result of their participation in the program.

RECOMMENDATIONS

(1) The placement coordinator has done an excellent job; however, one coordinator serving five high schools is unrealistic. At least one and, if possible, two additional placement coordinators should be employed by the Caldwell County School System. Three coordinators would be ideal in that each new high school would have its own placement coordinator.

(2) The position of career counselor funded by the project should be underwritten by the Caldwell County School System. The functions performed by the person in this position are essential to continuing the established program. The person who assumes this position might also be utilized to establish a uniform county wide testing program and a procedure for the dissemination and use of measurement results. This person could also coordinate and conduct regularly scheduled county wide guidance meetings, perhaps every six weeks, for the purpose of disseminating information, engaging in county-wide planning, and improving articulation.

(3) Effective lines of communication have been established between the Caldwell County School System and local industry. It is recommended that this foundation be built upon and continued.

(4) Work should continue on the Learning Activity Packages, and these curriculum materials should be field tested throughout Caldwell County.

(5) Extensive guidance and screening should be conducted before the selection of students for the 1975-76 program.

Appendix A containing A Proposal for Evaluation of the Guidance Oriented Alternative Work Experience Program and Follow-Up Study was not reproducible and was removed from this document prior to its being submitted to the ERIC Document Reproduction Service.

GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROJECT

On-Site Evaluation

April 16, 1975

8:00 - 9:00 Orientation Caldwell County administrative offices
Welcome - Dr. Gerald D. James, Supt.
Introduction of evaluation team - Dr. Ron Tuttle, Director Third Party Evaluation
Special Problems - Bill Stone, Project Director
Career Guidance Materials
Review of evaluation packets - Dr. Tuttle
Team Assignments

Guidance Team - escort Martie Barnes
9:30 Lenoir High School
10:30 Gamewell-Collettsville High School
11:30 Hibriten High School
12:30 Granite Falls High School (LUNCH)
2:00 Hudson High School
2:45 Caldwell County Administrative Offices
2:45 Talk with project staff
3:30 Team time to complete evaluation forms

Furniture Team - escort Bill Stone
9:30 - 11:00 Lenoir High School
9:30 Talk with principal
10:00 Observe furniture program
10:30 Look at individualized materials produced by the project in library
11:00 - 12:00 Talk to Dan Wortman, Bernhardt Ind.
12:00 - 1:00 LUNCH
1:00 - 2:15 Plant tour of Bernhardt Plant #1
2:45 Caldwell County School Administrative Offices
2:45 - 3:30 Talk with project staff, secondary coordinator and occupational director
3:30 - 4:30 Team time to complete evaluation forms

Textile Team - escort Bruce Whitely
9:30 - 11:00 Granite Falls High School
9:30 Talk with principal
10:00 Observe textile program
10:30 Look at individualized materials produced by the project in library
11:00 - 12:00 Talk to Steve Bumgarner, Shuford Mills, Inc.
12:00 - 1:00 LUNCH
1:00 - 2:15 Plant tour
2:45 Caldwell County School Administrative Offices
2:45 - 3:30 Talk with project staff, secondary coordinator and occupational director
3:30 - 4:30 Team time to complete evaluation forms

APPENDIX C

GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROJECT

Funding Period: July 1, 1974 to June 30, 1976

Funding Amount: $123,363.00

Grant Authority: P. L. 90-576, Title I, Vocational Education, Part C, Research and Training in Vocational Education, CFDA #13.498, APPRO: 7540273, CAN: 2001319, OBJ. CL.: 41.51

PROJECT PERSONNEL

1. Director: William S. Stone (24 Months)
2. Textile Coordinator: Michael K. Holt (12 Months)
   Granite Falls High School
3. Furniture Coordinator: William White (12 Months)
   Lenoir High School
4. Guidance Coordinator: Martha A. Barnes (10 Months)
5. Placement Coordinator: Burl Duncan
   (Paid out of state man-month funds) Assigned to the project
6. Research Assistant: Debra Pennell (16 Months)
7. Project Secretary: Rebecca A. Robbins (23 Months)

OBJECTIVES AND PRODUCTS OF THIS STUDY

I. Development of comprehensive career guidance programs within the county high schools.

   A. Development of an occupational education orientation package consisting of a guidebook and a slide-tape presentation on occupational education for 8th grade students.

   B. Development of a procedure to test 10th grade students for interest and design ways to use this data to better plan future programs based on student need.

   C. Career guidance materials furnished to each guidance office in Caldwell County Schools.

   D. Development of counselor tips or information sheets on such subjects as companies that market testing materials and agencies in Caldwell County that offer services to high school students.

   E. Demonstrating the value of special assembly speakers who would talk on such subjects as attitudes and behavior.

   F. Demonstrating value of a broad testing program to high school guidance counselors.

II. Establish a county wide job placement program to serve high school students in Caldwell County.

   A. Unit wide job placement service is operational serving all five high schools in the Caldwell County Schools.

   B. Development of a guidebook on job placement for other units to use has begun.

D. Development of a student booklet on "How To Get A Job" has begun.

III. Development of work experience programs that will seek teaching innovations to improve the quality of instruction in our cooperative program areas.

A. Develop an individualized general related curriculum for use in Industrial Cooperative Training Programs.

B. Develop technical manuals on textile and furniture manufacturing for use in Industrial Cooperative Training Programs.

C. Initiate workshops to train the I.C.T. instructors in Caldwell County in the use of individualized materials. (Fall, 1975)

D. Establish advisory committees in furniture and textile manufacturing which will work jointly with the project in developing technical related materials for use in Industrial Cooperative Training classes.

IV. Develop procedures to successfully obtain follow-up information on graduates of the Caldwell County School System and to develop ways to utilize this data in program planning.

A. A questionnaire was used to obtain follow-up data from the 1974 graduates but only a 30% response was obtained.

B. The 1975 graduates will be contacted by phone in order to achieve a much higher response. This data will then be compiled and distributed to program planners across Caldwell County.

Page 100 consisting of a budget summary chart was not reproducible and was removed from this document prior to its being submitted to the ERIC Document Reproduction Service.

APPENDIX D

I. One of the objectives of the Guidance Oriented Alternative Work Experience Project is the development of a comprehensive career guidance program in the Caldwell County high schools. To what extent has this objective been met?

(a) What are the greatest strengths or most notable features of the career guidance program?

(b) What are the weakest or least adequate features of the career guidance program?

(c) What recommendations or changes would you suggest for the career guidance program?

(d) Other comments or observations about the career guidance program.

II. Another objective of the Guidance Oriented Alternative Work Experience Project is the implementation of a model job placement program to serve all high school students within the Caldwell County School System. To what extent has this objective been met?

(a) What are the greatest strengths or most notable features of the job placement program?

(b) What are the weakest or least adequate features of the job placement program?

(c) What recommendations or changes would you suggest for the job placement program?

(d) Other comments or observations about the job placement ~~career guidance~~ program.

APPENDIX E

1. One of the objectives of the Guidance Oriented Alternative Work Experience Program is to establish model work experience programs in the areas of textiles and furniture manufacturing that will provide both the skill, development, and job climate necessary to achieve and maintain meaningful employment in local industries. To what extent has this objective been met?

(a) What are the greatest strengths or most notable features of the alternative work experience program?

(b) What are the weakest or least adequate features of the alternative work experience program?

(c) What recommendations or changes would you suggest for the alternative work experience program?

(d) Other comments or observations about the alternative work experience program.

I. The Guidance Oriented Alternative Work Experience Project has developed learning activities packages for the Industrial Cooperative Training curriculum. What is your evaluation of these curriculum materials?

(a) What are the most outstanding or notable features of the ICT curriculum materials?

(b) What are the weakest or least adequate features of the ICT curriculum materials?

(c) What recommendations or changes do you suggest for the ICT curriculum materials?

(d) Other comments or observations concerning the ICT curriculum materials.

APPENDIX F

Name _____ High School Attended _____

EMPLOYMENT

1. Are you currently employed on a full time basis?
   Yes_____
   No _____

2. State name of your employer: _____
   When were you employed? _____
   What is your title? _____
   What are your duties or responsibilities? _____
   _____
   Please check your expected annual salary range:
   ( ) $ 00. —$ 1000.
   ( ) $1000. —$ 2500.
   ( ) $2500. —$ 5000.
   ( ) $5000. —$ 7500.
   ( ) $7500. —$10000.
   ( ) over $10,000.

3. Did you encounter difficulty in securing employment?
   Yes_____
   No _____

4. Check method(s) used in obtaining employment:
   ( ) Applied directly to employer.
   ( ) Referred to employer by friends or relatives.
   ( ) Referred to employer by the N.C. State Employment commission.
   ( ) Referred to employer by the school.
   ( ) If none of the above state the method you used in getting your job. ____
   _____

5. Would you say that you:
   ( ) Are extremely pleased with your job.
   ( ) Are moderately pleased with your job.
   ( ) Think of it as an average job, just somewhere to work.
   ( ) Dislike your job.
   ( ) Have intense dislike for your job.

6. Do you feel your chances for advancement are:
   ( ) Good
   ( ) Average
   ( ) Poor

7. Do you consider your duties to be:
   ( ) Extremely hazardous
   ( ) Fairly safe
   ( ) Completely safe

8. Would you recommend your job and your employer to your friends?
   Yes _____ Explain _____
   No _____ Explain _____

EDUCATION

9. Are you currently enrolled in a:
   ( ) 4-year college
   If so give name of college. _____
   ( ) 2-year college or technical institute
   If so give name of institution. _____
   ( ) Trade school
   If so give name of school. _____
   ( ) None of the above.

10. When will you start college? _____

11. What is your anticipated graduation date? _____

12. Please state your major course of studies. _____

13. What is your minor? _____

14. Please indicate the reason(s) for your occupational choice: _____
    _____
    _____

15. If you attend an institution out of the Caldwell County area do you plan to return to the county to work in your chosen field?
    Yes _____
    No _____

U. S. MILITARY

16. Did you enter the military after graduation?
    Yes _____
    No _____

17. Check your branch of service
    ( ) Army
    ( ) Navy
    ( ) Air Force
    ( ) Marine Corps

18. Do you tentatively plan a permanent career in the military?
    Yes _____
    No _____
    If not what is your expected discharge date? _____

19. While in service are you now or will you be working toward a specific skill?
    Yes _____
    No _____
    If yes indicate the skill _____

20. If you do not stay in service on a permanent basis will you return to Caldwell County to work?
Yes _____
No _____

21. If college is planned state your college preference: _____

_____

OCCUPATIONAL PREPARATION

22. Regarding school preparation for your occupational choice please check one of the following that is most appropriate to you.
( ) High School curriculum (courses) was extremely beneficial.
( ) High School curriculum (courses) was more than adequate.
( ) High School curriculum (courses) was adequate.
( ) High School curriculum (courses) offered very little assistance.
( ) High School curriculum (courses) was totally worthless.

23. Would you prefer to see the high school curriculum:
( ) More academically oriented?
( ) More occupationally oriented?
( ) Remain as it is?

24. Did the following departments in high school meet with your expectations?

English Dept. Yes _____ No _____
Explain _____

Math and Science Dept. Yes _____ No _____
Explain _____

Social Studies Dept. Yes _____ No _____
Explain _____

Business Dept. Yes _____ No _____
Explain _____

Vocational Dept. (including Home Ec.) Yes _____ No _____
Explain _____

Guidance Dept. Yes _____ No _____
Explain _____

25. Please offer your comments, ideas, and suggestions as to how school administration in meeting the needs of all students could make school more meaningful, more relevant, and more interesting.

_____

_____

_____

Thank you for your cooperation.

Burl F. Duncan

APPENDIX G

CRITERIA - GRADES 4-9

CATEGORY I - Academic Abilities and Achievement

1. History of academic failure and low scholastic achievement. Any student who has been retained and/or who has failed two or more courses and/or who has a D average or below should be flagged for further study.
2. Depressed reading scores. Any student who has an ID from criterion I_1, and has a standardized reading score more than 1.5 grade levels below norms should be given "tentative" identification.
3. Depressed IQ. Any student who exhibits criterion I_1 and I_2 and has a measured IQ from 0-16 percentile should be given "possible" identification.
4. Low academic motivation. By teacher observation, any student who exhibits criterion I_1 and I_2 and/or I_3 and is lax in completing assignments, forgetful of academic obligations, indifferent in doing in-class assignments, inattentive during class discussions, has low achievement scores and/or is unprepared consistently to do classwork, should be given a "probable" identification.

CATEGORY II - School Environment

1. High absentee rate. Any student who can be characterized by any three criteria in Category I and has an absentee rate more than five days per marking period should be given a "probable" identification. Each criterion less than three will reduce the classification one level.
2. Abrasive and self-denying behaviors. Any student who can be

characterized by any three criteria in Category I and consistency is rude, disruptive, clownish, self-deprecating, and/or hostile, should be given a "probable" identification. Any student who shows all characteristics listed so far is "most probable" and should receive immediate attention.

3. Frequent transferring of schools. Any student who can be characterized by any three of the existing six criterion and has a history of attending excessive numbers of different schools should be given a "possible" identification. For each additional criterion that can be applied, the identification classification should be raised one level.

CATEGORY III - Familial

1. Low parental education. Any student who has been classified by the above seven criterion and whose parent(s) have less than an eighth grade education should be reclassified one level higher.
2. Low support to achieve. Any student who has been classified by the seven criterion in categories I and II and whose parent(s) are indifferent to his/her school achievements should be reclassified one level higher. If both familial criterion apply, the reclassification should be two levels higher.

CATEGORY IV - Physical

1. Visual-Motor Problems. Any student who has been classified by the criterion given in Categories I-III and has observed problems in visual-motor coordination such as apparent dyslexia or lack of hand-eye coordination in physical education should be reclassified one level higher.

2. Untreated dental and medical problems. Any student who has been classified by the criterion in Categories I-II and who shows medical and/or dental symptoms that are untreated, including poor nutrition, should be reclassified one level higher. If both physical criterion apply, the reclassification should be two levels higher.

CATEGORY V - Social Relationships

1. Non-participant in school activities. Any student who has been classified by the criterion in Categories I-IV and who has little or no participative activity in the school's extra-curricular program should be reclassified one level higher.
2. Reported delinquent activity. Any student classified by the criterion in Categories I-III and who has been arraigned for delinquent activities such as running away, substance abuse (drugs, alchohol, etc.), assault, breaking and entering, and larceny should be reclassified one level higher. If both social relationship criterion apply, the reclassification should be two levels higher.

CATEGORY VI - Personality Characteristics

1. Low attitude toward school. Any student who has been classified by the criteria in Categories I-IV and who has a low attitude toward school should be reclassified one level higher.
2. Low need to achieve. Any student who has been classified by the criterion in Categories I-IV and who indicates a low need to achievement should be reclassified one level higher. If both personality criteria apply, the reclassification should be two levels higher.
3. Low desire for order and control. Any student who has been classified by the criterion in Categories I-V and who reveals a low desire

for control and orderliness should be reclassified one level higher. If one other personality criterion applies, the reclassification should be moved up two levels. If all three apply, the reclassification should go up three levels.

APPENDIX H

ANALYSIS OF RESULTS FROM THE

DROP-OUT IDENTIFICATION SYSTEM

1. As suspected, the academic area (1_1-1_4) turned out to be most predictive of drop-out potential. This finding is consistent with the literature and with our own hypothesis.

* 2. <u>The single greatest contributor to drop-out potentiality is an inadequate reading ability</u>. Since schooling is so highly verbal oriented, an inability to read will negatively influence many other manifestations of drop-out potentiality. An unsuccessful reader, by and large, is an inadequate and unsuccessful student.

3. Excessive absenteeism is not a major factor in drop-out potential in Caldwell County. The spread of students identified as excessive in absence increases with age, a factor consistent with the reality that ADA is higher in elementary schools than in secondary or middle schools.

4. As indicated by 1_4 (Low Motivation to Achieve), 111_2 (Low Home Support for Achievement) and V_1 (Non-participant in extra curriculars) much work needs to be done to strengthen the affective education of Caldwell students. For students who exhibit these characteristics, ways must be found to build their confidence and self-image.

5. Based on the finding in the third area dealing with parental influence, some rather intensive work in parent effectiveness is warranted, particularly for Special Education youngsters.

6. Lack of academic success (and hence drop-out potential) does not manifest itself in abrasive or abusive behavior in all

instances. In fact, less than half as many cases were categorized for abrasive behavior is a sympton, but not a cause of drop-out potential.

7. Physical status seems to be a minor factor in predicting drop-out potential. While the presence of untreated medical and/or dental problems, or the presence of visual-motor difficulties is real to those who possess them, they make up a small portion of the total number identified.

8. It would appear that while no single attendance area has a significatnly more pronounced problem than others, several schools seem to have a significantly higher proportion identified. The county average was 9 per cent. Eleven schools registered percentages above that figure; eight registered below. Five recorded a proportion at 12 per cent or above. I would suggest that if target schools are to be taken, they should be selected in decending order of percentage. This is not to pick on or shame a particular school; it is a recognition of the location of problem concentration.

9. The classification sub-system revealed that as the severity of the categories increased, so did the number of students so classified, ranging from one (flagged) to 442 (near certain). The whole matter of dropout prevention by curricular means needs severe attention.

10. No particular grade level stands out as needing more attention than others. The numbers are pretty consistent.

SCHOOL	MEMBERSHIP 5th School Month	NUMBER STUDENTS IDENTIFIED	PERCENT

APPENDIX I

00 009 036

1. Notify the parent or guardian in writing, giving a detailed account of the charges and the grounds justifying his action;

2. Request the parent or guardian to appear at school at their earliest convenience, accompanied by the student, to discuss the charges against the student, review the evidence in the case, and investigate the possibility of conciliation.

C. In cases of suspension in excess of ten (10) school days, or expulsion (dismissal), or any suspension during the last ten (10) school days of the school year, the following procedural guidelines will be followed.

1. The principal will notify the parent or guardian in writing, giving a detailed account of the charges and the grounds justifying his action.

2. The principal will further inform the parent or guardian of the student's right to a hearing before the Superintendent of Caldwell County Schools (or in the event of his absence or disability, his designee) who will act as the hearing authority. Such hearings shall be held not less than five (5) nor more than ten (10) school days after the date of dismissal.

3. The principal will also notify the parent or guardian of the students right to be represented by legal counsel at the hearing.

4. The principal will furnish the Superintendent with copies of all correspondence pertaining to the case; and to the parent, guardian, or legal representative if requested.

The following procedural guidelines will govern the hearing:

1. The parent or guardian may be present at the hearing.

2. The student, parent, or guardian may be represented by legal counsel.

3. If he so desires, the hearing authority will have legal counsel from the Board Attorney.

4. A record of the hearing shall be kept.

5. The principal shall present his findings and the reasons for his action.

6. The student shall be allowed to observe all evidence offered against him, and he shall be allowed to question any witness.

7. The student shall be allowed an opportunity to give his version of the facts and their implications. He shall also be allowed to offer other evidence and the testimony of other witnesses.

8. The hearing authority shall be impartial and make his determination solely on the evidence presented at the hearing.

9. The hearing authority shall state within a reasonable time after the hearing, and before it is adjourned, his findings as to whether or not the student is guilty of the conduct charged and his decision, if any, as to disciplinary action.

10. The findings of the hearing authority shall be reduced to writing and sent the student and his parent or guardian.

11. The student and his parent or guardian shall be informed of their right to appeal to the Caldwell County Board of Education and/or the courts.

12. If either the hearing authority (Superintendent) or the appellate authority (Board of Education) find against the student, the suspension or expulsion (dismissal) will remain in effect until reversed by a higher appellate authority, or until the suspension or expulsion period is over, whichever comes first.

D. All notifications required by this regulation will be deemed complied with if notice is mailed to the last address on record of a parent or guardian as shown in school files.

Responsibility of School Personnel for School Conduct, Behavior, and Discipline

"The Caldwell County Board of Education recognizes that discipline should assist the student in discarding immature ways of satisfying urges and substituting some mature forms of self-expression. Positive measures which best serve to fulfill this purpose should be used whenever possible in dealing with student behavior, and in no case should student achievement be penalized as a means of discipline. However, if a student is suspended or has an unexcused absence, the teacher may or may not accept make-up work. Therefore, corporal punishment, suspension, and expulsion are measures to be employed only after available school and support services have been considered, or when school personnel are unable to cope constructively with pupil misconduct, or where emergency conditions require the use of corporal punishment, suspension, or recommendations for expulsion." (Board Policy JD)

"The hallmark of the exercise of disciplinary authority in the Caldwell County Schools will be fairness. The Constitutional rights of individuals assures the protection of due process of law; therefore, this system of legally sound procedures is developed with regard to the administration of discipline in the schools." (Board Regulation JCAA-R)

160

Responsibility of Administration

The Superintendent and his designated representatives shall support principals and teachers in the proper exercise of their disciplinary responsibility. In addition, the Superintendent or his designee shall be responsible for seeing that all state and local laws relating to student behavior and all school board policies and regulations are enforced and that copies of specific policies, laws, rules, and regulations are distributed to parents and teachers.

Responsibility of Principals

It is the principal's responsibility to maintain good discipline. He shall enforce in his school all state and local laws and regulations pertaining to the development of good discipline. He may delegate to the assistant principal or to any teachers such duties as may be desirable for the orderly operation of the school. However, he retains the final responsibility for all conduct in his school.

In addition, the principal shall provide for the development of a code of behavior for the school which he administers. This code shall include rules not in conflict with school board policy, which the principal, members of the advisory committee, teachers and students deem necessary in order to provide for the development of wholesome human relationships to further the effective and efficient operation of the school.

Responsibility of Teachers

Teachers are responsible for the development of well-planned classroom activities. It is the duty of the teacher to attend to the disciplinary problems in the classroom and in the school (both in the building and on the playground) and to encourage a high standard of conduct among all students. Teachers are authorized to administer any reasonable punishment.

Corporal Punishment

Caldwell County Board of Education policy JDA based on N. C. State Law (115-146) gives principals, teachers, substitute teachers, voluntary teachers, teachers' aides, assistants, and student teachers in the public schools the right to use reasonable force in the exercise of lawful authority to restrain or correct pupils and maintain order.

These guidelines are to be followed in the administration of corporal punishment; however, guideline (2) need not be followed when the behavior is . . . "so anti-social or disruptive in nature as to shock the conscience." (Baker vs Owen)

1. Corporal punishment should never be administered to a student known by school personnel to be under psychological treatment unless there has been a pre-conference with the school psychologist or that student's physician.

2. Corporal punishment should not be used until alternative methods of punishment have been unsuccessfully tried first, and unless the child has been warned that corporal punishment may be the result of further misbehavior.

3. A second school official is required to witness the punishment. The student must be told the reason for the punishment in the presence of the above witness before punishment is administered.

4. Parents who request a written explanation as to the reason for the punishment should be provided with such an explanation.

5. The person administering the discipline shall maintain a record of all instances where corporal punishment is administered. This record shall contain the name of the student, the date, the time, the number of strokes administered, the infraction of rules which caused the punishment, who administered the punishment, and the name of the adult witness. This shall be a private record of the person administering the punishment.

Suspension and Expulsion

Some types of conduct for which students who violate these regulations may be suspended or expelled are listed below (Board Policy JD). The list is not intended to include all of the regulations, but rather to illustrate clearly the types of conduct which the Board feels are inconsistent with the orderly and efficient operation of the Caldwell County Schools.

1. Students shall refrain from fighting.

2. Students shall refrain from drinking or possessing intoxicating beverages at school or at school activities.

3. Students shall refrain from partaking of or possession of illegal narcotics at school or at school activities.

4. Students shall refrain from gambling.

5. Once students have entered upon the school grounds, they shall remain there until the close of the day, unless they are granted permission to leave by the principal. They are expected to report to school on time and to report to each class on time.

6. Students under 16 years of age shall obey the attendance laws of the state. Those over 16 years of age shall observe the same laws if they choose to remain in school.

7. Students shall not possess or explode any type of fireworks or explosives.

8. Smoking will be permitted only at designated times and places. The times and places will be designated by the principal.

9. Students are expected to be properly dressed commensurate with the activity being conducted. Grooming which does not meet the social standards of the community will not be allowed.

10. Students shall not carry a concealed weapon.

11. Students shall refrain from engaging in any activity that would disrupt the normal school procedure.

The above shall apply at all school functions, on or off campus.

Student Due Process Rights

The following procedures shall be followed in dealing with any alleged violation of the above regulations: (Board regulation JCAA-R)

A. Before any suspension of a student from the Caldwell County Schools, unless said student poses a continuing danger to person or property or an on-going threat of disrupting the academic process, the principal will

1. Give the student either oral or written notice of the charges against him;
2. Give an explanation of the evidence against the student if he denies the charges against him;
3. Provide the student an opportunity to present his side of the story;

B. In case of a student's suspension from school for ten (10) school days or less, the principal will

ABSTRACT: THE DOCUMENT CONTAINS A SUMMARY REPORT (22 PAGES) AND EXTENSIVE APPENDIXES DETAILING A TWO-YEAR PROJECT DESIGNED TO: (1) DEVELOP COMPREHENSIVE CAREER GUIDANCE PROGRAMS WITHIN THE COUNTY HIGH SCHOOLS; (2) ESTABLISH A MODEL COUNTY-WIDE JOB PLACEMENT PROGRAM FOR HIGH SCHOOL STUDENTS; (3) DEVELOP WORK EXPERIENCE PROGRAMS IN TEXTILE AND FURNITURE MANUFACTURING; AND (4) DEVELOP AN INDIVIDUALIZED CURRICULUM FOR INDUSTRIAL COOPERATIVE TRAINING CLASSES. ALONG WITH SUPPORTIVE MATERIALS DESCRIBING PROJECT ACTIVITIES, STUDENT TEST RESULTS, AND THE EVALUATION PLAN, THE PRODUCTS DEVELOPED ARE INCLUDED IN THE REPORT. AN INDIVIDUALIZED CURRICULUM FOR INDUSTRIAL WORK EXPERIENCE PROGRAMS COMPRISES 30 UNITS, EACH CONTAINING OBJECTIVES, LEARNING ACTIVITIES, AND TESTS. UNIT TOPICS INCLUDE EMPLOYMENT INFORMATION, HUMAN RELATIONS, DAILY LIVING SKILLS, AND BASIC MATH SKILLS. TWO TRAINING MANUALS, ONE FOR TEXTILE MANUFACTURING AND ONE FOR FURNITURE MANUFACTURING, PRESENT DETAILED TRAINING PLANS FOR SPECIFIC JOBS IN THESE TWO INDUSTRIES AND SUPPLEMENTARY TECHNICAL INFORMATION. OTHER PRODUCTS ARE: A COMPUTERIZED DROPOUT IDENTIFICATION SYSTEM, A TRANSPORTABLE MODEL FOR A JOB PLACEMENT SERVICE IN RURAL AREAS, A GUIDEBOOK ON OCCUPATIONAL EDUCATION FOR EIGHTH GRADE STUDENTS, AND BROCHURES ON A DISCIPLINE CODE OF CONDUCT FOR TEACHERS, PARENTS, AND STUDENTS. HIGHLIGHTS

OF OCCUPATIONAL EDUCATION

IN CALDWELL COUNTY SCHOOLS

4

SEX BIAS IN OCCUPATIONAL EDUCATION

Any student, both male and female, college-bound or non-college-bound, will be afforded the opportunity to enroll in any occupational course offered in the Caldwell County School System.

For Further Information Contact:
Mr. Bruce Whitely
Director Occupational Education
Caldwell County Schools
Post Office Box 309
Lenoir, North Carolina 28645
Telephone: 754-5381 Ext. 53

FOREWORD

Occupational education is an integral building block in the comprehensive educational structure of the Caldwell County Schools. All students who want, need, and can profit from occupational education are enrolled in appropriate courses based on their interests, needs, and abilities with respect to present and anticipated employment opportunities.

The citizens of Caldwell County expect, need, and deserve a sound total education program for the young men and women, they send to their schools. Consequently, the school system must continually search for ways and means to improve the quality of the occupational education programs offered in our schools. The real test of our educational progress will be the extent to which our schools produce the productive well-rounded citizen in which we all can take pride.

This document represents a brief summary of the occupational courses now offered in our schools. We hope you will find the information both helpful and informative.

Dr. Gerald D. James
Superintendent
Caldwell County Schools

ACKNOWLEDGEMENT

This booklet was sponsored by the Guidance Oriented Alternative Work Experience Project; Grant Number OEG-O-74-8580, Project Number V0180VZ; a federally funded occupational research project. The design and printing of this booklet was done by the students in the Hibriten High School Graphics Department.

The project staff in their search for new approaches to vocational guidance felt a booklet of this type would enhance the occupational orientation of students as they prepare to go to high school, the awareness of all high school students of the availability of occupational courses, and the flow of information concerning occupational education to the citizens of Caldwell County.

William S. Stone
Project Director

7006

TITLE: Introduction to Agriculture

GRADE LEVEL: Students enrolled in the 9th and 10th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Granite Falls, Hibriten, and Hudson High Schools

COURSE DESCRIPTION:

This course is designed to give students an understanding and appreciation in the broad field of agriculture. The course covers six areas: production farming, agriculture services, agriculture supplies, processing, distribution, and professionalism. Students are also introduced to the opportunities and requirements needed in agriculture occupations. The term agriculture as used in this course encompasses far more than farming. Although farming is the nucleus of all agriculture, other agricultural occupational areas are included.

7008

TITLE: Agricultural Science and Mechanics

GRADE LEVEL: Students enrolled in the 10th, 11th, and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Granite Falls, Hibriten, and Hudson High Schools

COURSE DESCRIPTION:

Agricultural mechanics is designed to develop proficiencies in all phases of welding, small engine service and repair, internal combustion engines, tractor maintenance, system of power transmission, automation of mechanization electric motors and drives, chemical equipment, planting, tillage and harvesting equipment, with safety integrated in all aspects of these learning areas.

Instruction is also provided in the areas of animal science, plant science, soil science, and agricultural business. Emphasis is given to the practice of "learning by doing" – students apply the principles and concepts learned in planned learning experiences both during and after school hours.

7018 and 7019

TITLE: Agricultural Co-op

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 2

LOCATION OF COURSE OFFERING: Granite Falls High School

COURSE DESCRIPTION:

Cooperative Education in Vocational Agriculture is a program which combines instruction at school with supervised learning experiences on the job which center around the student's field of interest. Although earning is an important aspect as cooperative education in agriculture, the key element is "learning" rather than "earning".

7030

TITLE: Agricultural Construction I

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville High School

COURSE DESCRIPTION

This course enables students to develop an understanding of the basic principles and concepts essential for the construction of farm buildings and facilities and to developmental and manipulative skills necessary for the application of these principles. It is composed of four major units, each related to a specific occupation: (1) farm carpentry; (2) concrete and masonry; (3) rural electrification, and (4) water and waste disposal. Safety habits are developed in each unit of instruction.

7034

TITLE: Agriculture Mechanics I

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hibriten and Granite Falls High Schools

COURSE DESCRIPTION:

This course enables students to develop an understanding of the basic principles and concepts of engineering in the area of agricultural machinery and equipment; and to develop mental and manipulative skills necessary for the application of these principles and concepts. The course includes units of instruction in internal combustion engines, systems of power transmissions, welding; farm implements, and farm-product handling equipment.

7051

TITLE: Ornamental Horticulture

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

Learning experiences are provided through study and participation in classroom, laboratory, and through planned supervised practice at home, school or in an ornamental horticultural establishment. Vocational guidance and leadership development are integral parts of each unit of instruction. The course covers:

Plant Nursery Practice, including plant propagation, growing and handling plants, landscape planting.

Greenhouse Management, growing and handling flowers, and study of floral crops.

Landscape Gardening, including landscaping principles, public, private, and service areas landscape drawing, identification, setting, and maintenance of plants.

7050

TITLE: General Horticulture

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hibriten and Hudson High Schools

COURSE DESCRIPTION:

Learning experiences are provided through study, classroom, and laboratory exercises in General Horticulture. This includes production, management and marketing of fruits, vegtables, flowers and ornamental plants.

Horticulture practices, including propagation, plant nutrition, greenhouse and field management, pest control, mechanics, harvesting and marketing are included.

7070

TITLE: Forestry

GRADE LEVEL: Students enrolled in the 12th grade

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

This course is designed to enable students to develop an understanding of the underlying principles of plant science and soil science as related to forestry and forest management. Learning experiences are provided through classroom study, laboratory activities, and field trips to forest management areas.

7241 and 7251

TITLE: Cooperative Distributive Education

GRADE LEVEL: Students enrolled in the 11th and 12th grades who are 16 years old or older

UNIT CREDIT: First year - 2
Second year - 3

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Granite Falls, Hibriten, Hudson, and Lenoir High Schools

COURSE DESCRIPTION

This course is designed for students who have an interest in a career in retailing, wholesaling or business services. The course combines on-the-job training under school supervision with instruction in the class at school related to the student's work and interest. The classroom instruction includes a unit on marketing, selling, sales promotion, buying operation and management.

7221

TITLE: Marketing

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hudson High School

COURSE DESCRIPTION:

Marketing prepares high school students in becoming efficient in marketing the products of production to consumers and industrial users. The general purposes of marketing are to develop understandings, attitudes, and a desire to work in our nation marketplace; to provide an understanding of the importance of competition in our free enterprise economy; and to motivate youth through vocational interest to profit from the total secondary educational program. Students are prepared for various careers in marketing through the use of resource persons from the business community, through marketing studies, through observations of business practices through short-term employment, and through specialized studies or projects in keeping with the student's interests in some specialized field of marketing.

7831 and 7832

TITLE: Health Occupations I and II

GRADE LEVEL: Students enrolled in the 10th, 11th, 12th grades

UNIT CREDIT: First year - 1
Second year - 2

LOCATION OF COURSE OFFERING: Lenoir High School

COURSE DESCRIPTION:

Health Occupations I introduces the student to the health field, to concepts of personal, family, and community health and disease control, to the ethical and professional aspects of health occupations, to communication skills, to the basic sciences, and to the opportunities in the health field.

Health Occupations II provides the high school student with instruction in theory, and principles of health care, related health care information and basic health care skills. Through the co-operation of community health care facilities, the student is oriented to the clinical environment, to the medical team, and to the individual contributions of the assistant as a member of the health team.

7110

TITLE: Introductory Home Economics

GRADE LEVEL: Students enrolled in the 10th, 11th, and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Granite Falls, Hibriten, Hudson, and Lenoir High Schools

COURSE DESCRIPTION:

This course develops homemaking skills in the areas of food and nutrition, child care, consumer education, clothing construction, personal grooming, personal and family relationship, and housing. Various handicrafts and leisure time activities are also taught through the use of resource persons and hands-on experiences for the students. The course is designed as a basic introduction into consumer and homemaking economics.

7135

TITLE: Interpersonal Relationships

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: ½ unit

LOCATION OF COURSE OFFERING: Granite Falls High School

COURSE DESCRIPTION:

Advanced opportunities to study ways to prepare for multiple adult roles, including marriage; and ways the family is related to society; and to develop personal characteristics which contribute to employability. Emphasis is placed on the knowledge, skills and understandings in the area of interpersonal relationships which help prepare individuals for adult roles in the home, the community, and in employment.

7115

TITLE: Consumer Education

GRADE LEVEL: Students enrolled in the 9th, 10th,11th, or 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Lenoir High School

COURSE DESCRIPTION:

This course is designed for students who are interested in acquiring basic skills in food management and preparation along with emphasis on clothing needs. Concepts on consumer and managerial practices as well as changing family needs are incorporated into the course.

7132

TITLE: Advanced Clothing and Textiles

GRADE LEVEL: Students enrolled in the 10th, 11th, and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Lenoir High School

COURSE DESCRIPTION:

This course places emphasis on learning which helps prepare individuals for adult responsibilities in meeting personal and/or family clothing needs; or for pursuing professions leading to employment in related occupations or professions.

7133

TITLE: Advanced Food and Nutrition

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

This course is designed to help prepare individuals for adult responsibilities and opportunities in satisfying personal and family food needs; or may contribute to the employability in food occupations or professional careers.

7120

TITLE: Advanced Home Economics

GRADE LEVEL: Students enrolled in the 10th, 11th, and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Granite Falls, Hudson, and Hibriten High Schools

COURSE DESCRIPTION:

This course is designed as a sequential course to any of the introductory home economics courses. The course provides advanced learning in the major content areas of home economics; career orientation; child development; clothing and textiles; consumer education; family relationships; food and nutrition; health and home care of the sick; and housing and home furnishings.

7145

TITLE: Child Care Services

GRADE LEVEL: Students enrolled in 11th and 12th grades

UNIT CREDIT: 2

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

The child care course is designed to prepare high school juniors and seniors for positions in related areas of child care services. The trainee is provided opportunities for related study, observation and actual experiences pertaining to the many facets of child care. The child care center operates on regular school schedule, five days a week, from 7:45 to 4:00 p.m. Each class of child care meets for two hours daily with total enrollment limited to approximately 30 trainees.

Actual care of children: Up to 15 children ages 3 and 4 years old are available daily for students to work with in a real life child care setting.

7170

TITLE: Family Life Education

GRADE LEVEL: Students enrolled in the 10th, 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hudson, Gamewell-Collettsville, and Hibriten High Schools

COURSE DESCRIPTION:

This course is planned for both boys and girls at the upper high school level and is directed towards preparation for marriage and homemaking for those who have had little or no home economics. The instruction covers nutrition and preparation of simple meals; care and selection of clothing; spending the family income; family relationships and child development; preparation for marriage; establishing and furnishing a home; and management of time, money, and human resources.

7144

TITLE: Clothing Services

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 2

LOCATION OF COURSE OFFERING: Gamewell-Collettsville High School

COURSE DESCRIPTION:

The course is designed to develop occupational competencies needed for employment as a seamstress, dressmaker, alterer, mender, reweaver, or accessory maker; and for advanced managerial or technical training. The course includes an orientation to scope and nature of jobs in clusters; grooming and personal appearance; interpersonal relationships; garment construction. alterations of patterns and clothing; construction of clothing accessories; use and care of fabrics; use and care of sewing equipment; safety practices and management techniques for planning work schedules and organizing work areas.

7131

TITLE: Child Development

GRADE LEVEL: Students enrolled in the 10th, 11th and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Lenoir High School

COURSE DESCRIPTION:

The Child Development class gives a student a practical approach in studying child development. Each student gets first hand classroom experience in working with young children within their school environment.

7181

TITLE: Preparation for Employment

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: ½ unit

LOCATION OF COURSE OFFERING. Gamewell-Collettsville High School

COURSE DESCRIPTION:

The course gives the student a chance to study the effect of employment on roles of men and women in the family and society, the relationship of interest and abilities to occupational choice, the factors affecting entry into selected occupations, and the relationships of employability to employment. The course is especially designed to assist any student who plans to go directly into the labor market after graduation.

7160

TITLE: Singles Living

GRADE LEVEL: Students enrolled in the 9th thru 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville High School

COURSE DESCRIPTION:

Introductory experiences for students who desire just enough home economics training to enable them to take care of their personal food and clothing needs. The course includes study in the area of child development, clothing, family relationships, foods, consumer education, housing and home furnishings, grooming and personal appearance, and orientation to employment in home economics related occupations.

7134

TITLE: Housing and Home Furnishings

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: ½ unit

LOCATION OF COURSE OFFERING: Hudson High School

COURSE DESCRIPTION:

Advanced opportunities to study alternatives in housing to meet individual and family needs, self expression through planning for selected areas within the home, creative techniques in home decoration, techniques in the management of a home and career opportunities in housing and home furnishings. The course will prepare the student for adult responsibilities opportunities in satisfying their personal or family housing needs; or help in pursuing programs leading to employment.

6431

TITLE: Directed Office Occupations

GRADE LEVEL: Students enrolled in the 12th grade

UNIT CREDIT: 2

LOCATION OF COURSE OFFERING: Garnewell-Collettsville, Hibriten, Hudson, and Lenoir High Schcols

COURSE DESCRIPTION:

This course develops skills and understandings necessary for the mastery of office tasks that are central to the smooth functioning of departments that handle mail, central files, copying and duplicating, financial records, purchasing and selling, inventories, and behavior that is most conducive to pleasant, rewarding relationships with fellow associates is developed. The students develop the above skills by working in the different offices of the school for actual "hands-on" experiences.

6430

TITLE: Cooperative Office Occupations

GRADE LEVEL: Students enrolled in the 12th grade

UNIT CREDIT: 3

LOCATION OF COURSE OFFERING: Gamewell-Collettsville and Granite Falls High Schools

COURSE DESCRIPTION:

This course permits students to attend classes for a half day and be employed in an office training station where on the job instruction is provided. The course provides two hours of classroom instruction daily to provide knowledge, skills and abilities needed in clerical, stenographic and junior management jobs.

7990

TITLE: Introduction to Vocations

GRADE LEVEL: Students enrolled in the 9th grade

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hudson High School and Lenoir Middle School

COURSE DESCRIPTION:

This is a course designed to introduce students to the world of work. The course centers around instruction on job success and its relationship to their interest, aptitudes, abilities, and physical characteristics. Students become acquainted with the American economic system, forms of business organizations, money management, and changing occupational patterns. The course will enable the student to be able to better determine their career goals.

THE MIDDLE GRADES OCCUPATIONAL EXPLORATION PROGRAM

The Middle Grades Occupational Exploration Program provides students with occupational information, an opportunity for self-appraisal, and exploratory learning activities that will enable them to wisely prepare for making a living.

These opportunities are offered through four exploratory labs: Service Occupations, Industrial Occupations, Business and Office Occupations, and Occupational Information.

Every student is assigned to an occupational class for a nine-week period. At the end of each nine weeks, students rotate to another exploration class, until by the year's end, they will have had the opportunity to broaden their experience in four vocational areas and will have explored hundreds of job competencies.

7651

TITLE: Introduction to Technical Drafting I

GRADE LEVEL: Students enrolled in the 10th and 11th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Hibriten, Hudson, and Lenoir High Schools

COURSE DESCRIPTION:

The basic technical drawing course is primarily designed for the beginner in high school who is interested in technical drawing because he wishes to be a draftsman, an engineer, an industrial designer, an architect, or a member of anyone of the numerous other professions which demand a knowledge of technical drawing.

7652

TITLE: Technical Drafting II

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: 2

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Hibriten, Hudson, and Lenoir High Schools

COURSE DESCRIPTION:

This course of study in Advance Drafting is prepared for those students who have completed the first year course in Technical Drafting I.

This course is based upon the three main areas of: Basic Technical Drawing, Sheet Metal Layout, and Architectural Drafting. It is somewhat exploratory in nature and is designed to provide a basis for drafting as a vocation as well as provide a broad area of knowledge for pre-engineering and trade school students.

7653

TITLE: Architectural Drafting III

GRADE LEVEL: Students enrolled in the 12th grade

UNIT CREDIT: 2

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Hibriten, and Lenoir High Schools

COURSE DESCRIPTION:

The course will teach students the fundamentals of architectural drawing and basic ideas of light construction. This will include sketching rooms, drawing floor plans, electrical plans, elevations and perspectives as well as learning the basic symbols of architectural design.

7611 and 7612

TITLE: Bricklaying

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: Either 2 or 3 depending on length of class

LOCATION OF COURSE OFFERING: Gamewell-Collettsville, Granite Falls, Hibriten, Hudson and Lenoir High Schools

COURSE DESCRIPTION

The philosophy of this course is to develop the necessary skills, technical information, and job judgement that is required for employment as qualified apprentice in the bricklaying trade. To provide the broad experience necessary to perform jobs where other building units of clay, stone, and concrete blocks are used. To develop safe, orderly, and reliable work habits. To develop occupational competence and high standards of workmanship. To develop an appreciation and understanding of the work done by others and how this work fits into the total building process. Practice is given in handling tools, laying brick, leveling and plumbing brick. Also the care and use of supporting tools and equipment such as wheelbarrows, scaffolds and mixers is taught.

7863 and7864

TITLE: Graphics and Industrial Communications

GRADE LEVEL: First year – Students enrolled in the 9th thru 12th grades. Second year – Students enrolled in the 11th and 12th grades.

UNIT CREDIT: First year – 1
Second year – 2

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

Graphics and industrial communications is a designed course of study to familarize the student with the major processed composing graphic arts, and their relative merits. Upon completion of this course of study the learner will have a saleable skill in the Graphics Industry above the entry level.

This course is designed to meet the interest, experiences, needs and abilities of the secondary student. Specific areas of study will be: photography, bindery, lithography, and silk screen printing.

7330

TITLE: Construction Industry

GRADE LEVEL: Students enrolled in the 9th and 10th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hibriten and Lenoir High Schools

COURSE DESCRIPTION:

This is an introductory course which will offer an opportunity to explore five areas of vocational trades and their relationship to construction. The areas of study include drafting, bricklaying, carpentry, electricity, and graphic arts.

7867

TITLE: Commercial Art

GRADE LEVEL: Students enrolled in the 10th, 11th, and 12th grades

UNIT CREDIT: 1

LOCATION OF COURSE OFFERING: Hudson High School

COURSE DESCRIPTION:

The course will enable the student to develop a working knowledge of the materials and methods used by industry to display their products or services to the public. The course includes instruction in lettering; freehand sketching; work in pen and ink, charcoal, water color, pastels and acrylics; photography; advertising techniques; and investigation of jobs in the commercial art field and schools that offer art - related courses.

7413

TITLE: Industrial Cooperative Training

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: First year - 2
Second year - 3

LOCATION OF COURSE OFFERING: Gamewell-Collettsville Granite Falls, Hibriten, Hudson, and Lenoir High Schools

COURSE DESCRIPTION:

The Industrial Cooperative Training Program is a plan for bringing together the training resources of the community and the school. It is an arrangement between business, industrial and professional establishments in the community and the public high school whereby the establishments provide part-time employment and training to students and the school provides supervision and general and technical subject matter related to the occupation.

7631 and 7632

TITLE: Carpentry

GRADE LEVEL: Students enrolled in the 11th and 12th grades

UNIT CREDIT: First year – 2
Second year – 3

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

Carpentry is an ancient art, yet today it is a modern high paying skill requiring precision training. Students learn everything from reading blue prints, using electric tools, "framing square" to how different cuts should fit. Students get first hand training on live projects as part of their class training.

7712 and 7713

TITLE: Electricity and Electronics

GRADE LEVEL: Students enrolled in the 10th, 11th, and 12th grades

UNIT CREDITS: First year – 2
Second year – 3

LOCATION OF COURSE OFFERING: Hibriten High School

COURSE DESCRIPTION:

This course enables a student to develop a marketable skill in house wiring, appliance, radio, and television repair. The student develops a basic understanding of electrical theories using lab experiences related to theoretical concepts. The student learns to read schematic diagrams, use of measuring devices, construction and maintenance of electronic equipment.

Extended Day School

The Extended Day School is designed for students, who are out of school, for all or a portion of the school year; (suspension, pregnancy, sickness, economic needs, etc.) or students who need to make up additional credits, or students who need financial aid to attend school, and/or students who are having difficulty in the traditional academic program.

The Extended Day School program is developed around a self-paced programmed instructional method. All work is individualized with little traditional group teaching. The achievement level of each student is determined at the time of entrance, and he is assisted through the educational process at his own pace of learning.

Students can take up to five units for transfer credit back to their original residence school or work towards the high school equivalency diploma program. Also vocational training programs as well as help in securing day time employment is provided.

TITLE: Vocational Orientation For The Educable Mentally Retarded

LOCATION OF PROGRAM: Oak Hill, Whitnel, Sawmills, Hudson and Gamewell Elementary Schools.

This program enables the EMR student at the upper elementary level or age range, 12 - 15, to be introduced to the vocational and occupational aspects of education with emphasis on programs designed to retain them long enough in school to develop vocational competency. The program utilizes a man teacher with training and experience which enables him to carry out a prevocational hands-on type orientation program primarily for boys in occupational areas in which persons with these types of handicaps might eventually find employment. A woman teacher trained in home economics and related areas works with the girls in the program and provides instruction in basic cooking, serving, mending, child care, and hygienic needs as related to occupations.

TITLE: Occupational Research

Part C of the Vocational Education Act of 1963 as amended.

Caldwell County Schools have been fortunate in being selected as a site for two major research studies for the U. S. Office of Education.

In January of 1972, the State Board of Education selected a six member team to be responsible for the administration and planning of a career education model development program for Caldwell County. The project developed a model career education curriculum from grade K kindergarten to grade 14 or community college curriculum. The project involved all schools in Caldwell County along with the community college. The project ended December 31, 1974 and results were sent to the U. S. Office of Education.

In July of 1974, the U. S. Office of Education selected Caldwell County Schools as a site for an 18 month research project involved in Industrial Cooperative Training, job placement, and career guidance. The project now underway will search for ways to improve training methods in Industrial Cooperative Training Programs and establish and operate a unit wide job placement service.

Responsibility of School Personnel for School Conduct, Behavior, and Discipline

"The Caldwell County Board of Education recognizes that discipline should assist the student in discarding immature ways of satisfying urges and substituting some mature forms of self-expression. Positive measures which best serve to fulfill this purpose should be used whenever possible in dealing with student behavior, and in no case should student achievement be penalized as a means of discipline. However, if a student is suspended or has an unexcused absence, the teacher may or may not accept make-up work. Therefore, corporal punishment, suspension, and expulsion are measures to be employed only after available school and support services have been considered, or when school personnel are unable to cope constructively with pupil misconduct, or where emergency conditions require the use of corporal punishment, suspension, or recommendations for expulsion." (Board Policy JD)

"The hallmark of the exercise of disciplinary authority in the Caldwell County Schools will be fairness. The Constitutional rights of individuals assures the protection of due process of law; therefore, this system of legally sound procedures is developed with regard to the administration of discipline in the schools." (Board Regulation JCAA-R)

Responsibility of Administration

The Superintendent and his designated representatives shall support principals and teachers in the proper exercise of their disciplinary responsibility. In addition, the Superintendent or his designee shall be responsible for seeing that all state and local laws relating to student behavior and all school board policies and regulations are enforced and that copies of specific policies, laws, rules, and regulations are distributed to parents and teachers.

Responsibility of Principals

It is the principal's responsibility to maintain good discipline. He shall enforce in his school all state and local laws and regulations pertaining to the development of good discipline. He may delegate to the assistant principal or to any teachers such duties as may be desirable for the orderly operation of the school. However, he retains the final responsibility for all conduct in his school.

In addition, the principal shall provide for the development of a code of behavior for the school which he administers. This code shall include rules not in conflict with school board policy, which the principal, members of the advisory committee, teachers and students deem necessary in order to provide for the development of wholesome human relationships to further the effective and efficient operation of the school.

Responsibility of Teachers

Teachers are responsible for the development of well-planned classroom activities. It is the duty of the teacher to attend to the disciplinary problems in the classroom and in the school (both in the building and on the playground) and to encourage a high standard of conduct among all students. Teachers are authorized to administer any reasonable punishment.

Corporal Punishment

Caldwell County Board of Education policy JDA based on N. C. State Law (115-146) gives principals, teachers, substitute teachers, voluntary teachers, teachers' aides, assistants, and student teachers in the public schools the right to use reasonable force in the exercise of lawful authority to restrain or correct pupils and maintain order.

These guidelines are to be followed in the administration of corporal punishment; however, guideline (2) need not be followed when the behavior is . . . "so anti-social or disruptive in nature as to shock the conscience." (Baker vs Owen)

1. Corporal punishment should never be administered to a student known by school personnel to be under psychological treatment unless there has been a pre-conference with the school psychologist or that student's physician.

2. Corporal punishment should not be used until alternative methods of punishment have been unsuccessfully tried first, and unless the child has been warned that corporal punishment may be the result of further misbehavior.

3. A second school official is required to witness the punishment. The student must be told the reason for the punishment in the presence of the above witness before punishment is administered.

4. Parents who request a written explanation as to the reason for the punishment should be provided with such an explanation.

5. The person administering the discipline shall maintain a record of all instances where corporal punishment is administered. This record shall contain the name of the student, the date, the time, the number of strokes administered, the infraction of rules which caused the punishment, who administered the punishment, and the name of the adult witness. This shall be a private record of the person administering the punishment.

Suspension and Expulsion

Some types of conduct for which students who violate these regulations may be suspended or expelled are listed below (Board Policy JD). The list is not intended to include all of the regulations, but rather to illustrate clearly the types of conduct which the Board feels are inconsistent with the orderly and efficient operation of the Caldwell County Schools.

1. Students shall refrain from fighting.

2. Students shall refrain from drinking or possessing intoxicating beverages at school or at school activities.

3. Students shall refrain from partaking of or possession of illegal narcotics at school or at school activities.

4. Students shall refrain from gambling.

5. Once students have entered upon the school grounds, they shall remain there until the close of the day, unless they are granted permission to leave by the principal. They are expected to report to school on time and to report to each class on time.

6. Students under 16 years of age shall obey the attendance laws of the state. Those over 16 years of age shall observe the same laws if they choose to remain in school.

7. Students shall not possess or explode any type of fireworks or explosives.

8. Smoking will be permitted only at designated times and places. The times and places will be designated by the principal.

9. Students are expected to be properly dressed commensurate with the activity being conducted. Grooming which does not meet the social standards of the community will not be allowed.

10. Students shall not carry a concealed weapon.

11. Students shall refrain from engaging in any activity that would disrupt the normal school procedure.

The above shall apply at all school functions, on or off campus.

Student Due Process Rights

The following procedures shall be followed in dealing with any alleged violation of the above regulations: (Board regulation JCAA-R)

A. Before any suspension of a student from the Caldwell County Schools, unless said student poses a continuing danger to person or property or an on-going threat of disrupting the academic process, the principal will

1. Give the student either oral or written notice of the charges against him;
2. Give an explanation of the evidence against the student if he denies the charges against him;
3. Provide the student an opportunity to present his side of the story;

B. In case of a student's suspension from school for ten (10) school days or less, the principal will

1. Notify the parent or guardian in writing, giving a detailed account of the charges and the grounds justifying his action;

2. Request the parent or guardian to appear at school at their earliest convenience, accompanied by the student, to discuss the charges against the student, review the evidence in the case, and investigate the possibility of conciliation.

C. In cases of suspension in excess of ten (10) school days, or expulsion (dismissal), or any suspension during the last ten (10) school days of the school year, the following procedural guidelines will be followed.

1. The principal will notify the parent or guardian in writing, giving a detailed account of the charges and the grounds justifying his action.

2. The principal will further inform the parent or guardian of the student's right to a hearing before the Superintendent of Caldwell County Schools (or in the event of his absence or disability, his designee) who will act as the hearing authority. Such hearings shall be held not less than five (5) nor more than ten (10) school days after the date of dismissal.

3. The principal will also notify the parent or guardian of the students right to be represented by legal counsel at the hearing.

4. The principal will furnish the Superintendent with copies of all correspondence pertaining to the case, and to the parent, guardian, or legal representative if requested.

The following procedural guidelines will govern the hearing.

1. The parent or guardian may be present at the hearing.

2. The student, parent, or guardian may be represented by legal counsel.

3. If he so desires, the hearing authority will have legal counsel from the Board Attorney.

4. A record of the hearing shall be kept.

5. The principal shall present his findings and the reasons for his action.

6. The student shall be allowed to observe all evidence offered against him, and he shall be allowed to question any witness.

7. The student shall be allowed an opportunity to give his version of the facts and their implications. He shall also be allowed to offer other evidence and the testimony of other witnesses.

8. The hearing authority shall be impartial and make his determination solely on the evidence presented at the hearing.

9. The hearing authority shall state within a reasonable time after the hearing, and before it is adjourned, his findings as to whether or not the student is guilty of the conduct charged and his decision, if any, as to disciplinary action.

10. The findings of the hearing authority shall be reduced to writing and sent the student and his parent or guardian.

11. The student and his parent or guardian shall be informed of their right to appeal to the Caldwell County Board of Education and/or the courts.

12. If either the hearing authority (Superintendent) or the appellate authority (Board of Education) find against the student, the suspension or expulsion (dismissal) will remain in effect until reversed by a higher appellate authority, or until the suspension or expulsion period is over, whichever comes first.

D. All notifications required by this regulation will be deemed complied with if notice is mailed to the last address on record of a parent or guardian as shown in school files.

DUTIES AND RESPONSIBILITIES OF SCHOOL BUS PASSENGERS

Safe school transportation is considered an integral part of the total educational program within the Caldwell County Schools. The primary purpose of school buses is to transport pupils from home to school and return safely. The Caldwell County Board of Education recognizes that a safe school bus operation is only possible with the full cooperation of our parents, students, and school staff. Please read the following duties and responsibilities of school bus passengers carefully and do your part in ensuring an accident free school bus transportation program for our schools.

Meeting and Entering The Bus

- Select the safest route to your bus stop.
- Be on time — **Bus will not wait for tardy passengers.**
- If a highway must be crossed to enter the bus, you should wait until the bus and all traffic has stopped. Then cross the highway in front of the bus.
- Enter the bus only after the bus and all traffic has stopped. Be sure to enter the bus quickly and hold the handrail and **watch your step.**

On The Bus

- Take your seat quickly and remain seated.
- Open windows only if you get permission from the driver.
- Keep your head, arms, and feet inside the bus at all times.
- Never throw objects in the bus or out the windows
- Never shout to pedestrians or occupants of other vehicles from the bus windows.
- Never eat or drink in the school bus.
- Never pile books, musical instruments, lunch boxes, or other objects in the bus aisles.
- Never use profane and indecent language, tobacco, or alcoholic beverages while riding the school bus.

- Never talk to the driver or distract the driver's attention while the bus is operating except in an emergency.
- Never play, fight, or scuffle on the bus.
- Passengers must maintain complete silence at all railroad crossings.
- Never tamper with the emergency door or any part of the bus.
- Never mar or deface the bus in any way.
- **Never attempt to ride on a school bus, unless assigned to it by your principal.** It is not lawful for a person to ride on a school bus without proper assignment. [G.S. 115-184(a).]

Arrival on The School Grounds

- **Passengers shall remain seated or in position if standing, until the bus reaches the unloading area, has come to a complete stop, and the driver has opened the front door.**
- Passengers in front should move out first.
- Passengers shall not loiter or play near a stopped bus, but walk quickly away from the bus.
- **During the school day, all persons shall stay away from the bus parking area.**

Entering The Bus After School

- Follow instructions of your principal and teachers in going to the bus parking area and entering the bus after school.

- Students should leave their rooms at the appropriate bell and walk quickly (not run) and quietly to the bus loading area.
- After you enter the bus, take your place quietly.
- Second load bus passengers will leave their rooms at the appropriate bell and walk quickly (not run) to their respective bus lines. They should remain there until their bus arrives. **No running, playing, scuffling, or fighting will be tolerated.**

Leaving The Bus Enroute

- Leave your bus only at your designated stop.
- Never get off the bus at authorized stops to make purchases, visit or perform errands.
- Remain in position until bus has completely stopped at your bus stop and the driver has opened the door, then leave the bus in an orderly manner. If a highway must be crossed to leave the bus, you should cross the highway in front of the bus.
- Passengers should leave the bus stop as soon as possible and never remain near the bus to talk with, frolic with, or touch hands with bus passengers.
- **Students shall refrain from engaging in any activity while riding a school bus, loading or unloading from a school bus, or in the bus loading areas that would disrupt normal school procedures.**

Violations

Students who willfully violate these rules will be dealt with according to Caldwell County School Board Policy concerning Bus Conduct (JCDAD) or appropriate other school board discipline policies.

The following are the procedures used in Bus Conduct as outlined by board policy (JCDAD).

1. Parents of students who refuse to cooperate with bus drivers, principals, and teachers will be notified of their child's misconduct.

2. If said student, or students, persist in causing trouble on the bus by refusing to cooperate, **said student, or students, will be barred from riding a school bus for a period of one week, and parent should be notified.**

3. If said student, or students, continue to cause trouble on the bus after having been barred from riding the bus for one week, **then the parent should be notified again and said student, or students, shall be denied the privilege of riding a public school bus for the remainder of the school year.**

Dear Sirs:

I have enclosed an original computer program which is Appendix O in the final report of Project Number V0180VZ, Grant Number OEG-0-74-8580.

We experienced problems in getting real clear copies and consequently, the copies of the computer program in the final report are very light. I hope the original will be useful when microfilming is done.

Sincerely,

William S. Stone

5. Summary of the Report:

a. Time period covered by the report: July 1, 1974 - June 30, 1976

b. Goals and Objectives of the Project:

1. To determine the extent to which a Comprehensive Career Guidance Program has been developed within Caldwell County Schools.

2. To determine the extent to which a model Job Placement Program has been implemented to serve all high school students within the Caldwell County School System.

3. To determine the extent to which model Work Experience Programs have been established in the areas of textile and furniture manufacturing that will provide the skill, development, and job climate necessary to achieve and maintain meaningful employment in local industries.

4. To determine the extent to which a follow-up study of the Work Experience students, regular I.C.I. students who were randomly selected in the control group and all 1974-75 High School Graduates of Caldwell County Schools have been established in order to determine the success of these people in terms of salary, job mobility, etc.

c. Procedures Followed:

Since Caldwell County Schools underwent a merger with the former Lenoir City School System on July 1, 1974, as well as the retiring of the County School Superintendent E. M. White, the project was delayed two weeks in getting started. The new Superintendent of schools, Dr. Gerald D. James made a change in the Project Director from Charles E. Waters to William S. Stone. Stone officially became the new Project Director on July 19, 1974, and the project got underway.

The first action taken was to seek out and hire a staff of professionals who could operate effectively as a team in accomplishing the objectives of the project. This was completed by September 1, 1974. After the staff was on board, the first obstacle faced was the choice of target schools for the textile and furniture programs. Granite Falls High School was chosen as the site for the textile program, with Lenoir High School being named the site for the furniture program. Since no Work Experience Program can get off the ground without the necessary industrial support, a drive to get leading industrialist in Caldwell County in the areas of textile and furniture manufacturing involved in the project got underway. By August 8, 1974, the project had a committment from six leading manufacturing concerns in Caldwell County.

After the two target programs were selected, students were recruited with the help of the school guidance offices and pre-testing was begun. The Minnesota Vocational Interest

Inventory and the Tennessee Self-Concept Scale were the pre-test instruments. The career counselor made a random sample of 47 like students from the on-going industrial cooperative programs in the county and tested these students along with the 47 enrolled in the project's textile and furniture work experience programs.

During the first year of the project, July 1, 1974 till June 30, 1975, an Individualized Curriculum for Industrial Cooperative Programs was developed along with a Technical Training Manual in Textile and Furniture Manufacturing for use in work experience programs. From July 1, 1975 till June 30, 1976, these materials were field tested in all industrial cooperative programs in the Caldwell County School System.

The Job Placement Service was operational by September 1, 1974, serving the five high schools in Caldwell County with some 3,500 students. A Job Placement Booklet was also developed as a vehicle to inform other school systems about this type of placement service. These booklets were distributed to some 15 school systems in Western North Carolina.

d. Results and Accomplishments:

The project has developed an Individualized General Related Curriculum for Industrial Work Experience Programs; Technical Related Training Manuals in the area of textile, and furniture manufacturing for use in Work Experience Programs; and a structure for an affordable unit wide Job Placement Service in a rural setting. The project, in the area of career guidance, developed a discipline code of conduct for the county schools. Since disruptive behavior is one characteristic of school drop-outs, the project staff felt that if teachers, parents, and students better understood what the school rules were and the disciplinary procedures used if they are broken, a higher level of communication could be established with those students who were identified as potential drop-outs. Also, in the area of career guidance, the project staff demonstrated the need of adequate testing files in the school guidance offices, demonstrated the need of interest testing at the unit level for program planning, developed an Occupational Orientation Package for 8th grade students, developed a Drop-out Prevention Program which includes a computerized identification system for grades 2-8. This system was used in January, 1976 to identify potential drop-outs in grades 2-8 in the Caldwell County Schools. The data from this identification was used to determine the extent of the drop-out problem in Caldwell County by the Board of Education as well as by the Central Staff in designing programs such as a School Social Worker Program, Occupational Exploration Program for potential drop-outs, and a Developmental Reading Program.

e. Evaluation

The third-party evaluation contract was initiated with Appalachian State University by the project director under procedure 100a.105 Negotiated Procurements by state or local governments of the General Provisions for Programs.

f. Conclusions and Recommendations

A team approach to work experience programs where students in a class are divided into teams that operate as a unit on the job has proven a very effective training method.

The use of individualized curriculum materials in work experience classes will allow each student to work at his own pace without regard to where his classmates are in the text, allow the instructor to be free to personally help students who are having problems, and will provide more efficient use of time to allow more technical related instruction to take place.

The use of interest data on students compiled on a system wide basis is one effective ingredient in program planning.

A system wide Job Placement Service can be operated at a very affordable cost of one person's salary for ten months a year for every 3,500 students served. Using the structure developed in this project, the only other expense is minimal material cost and travel expense for the placement coordinator.

The use of craft instruction as a regular part of the curriculum for work experience programs with emphasis on quality construction of items being made will stimulate student interest, reduce absenteeism, and discourage drop-outs.

The development of any drop-out prevention program should incorporate an identification system based on sound educational data that will be used system wide to identify attendance areas with high concentration of potential drop-outs, grades in schools where potential drop-outs are found, and individual students who have learning problems which may lead to the student dropping out of school. The system should also be able to identify specific potentiality of each student.

6. Body of the Report

a. Problem Area Toward Which the Project Was Directed

Technological, scientific, and sociological changes in our society have made occupational and career-oriented programs essential within our schools. But more occupational education does not necessarily mean better occupational information for the students. Several areas of concern to occupational educators

are changes in work opportunities requiring more technical training; high percentage of students trained in our schools in traditional occupational programs who do not remain on those jobs after graduation; lack of communication between industry, businesses and the public schools concerning needed changes in vocational-occupational training; and a lack of adequate placement programs for students, (White, 1973, pp. 1-2). These problems are common to all areas of our nation. The purpose of this project is to research a program designed to alleviate and overcome these problems and to this end let us examine some community characteristics which have influenced this effort.

The 1970 population of Caldwell County was 56,699 with 17,525, the estimated average family income for the period from 1969 to the present falls between $8,000 and $9,000 for Caldwell County. Twenty percent of the county's population had an estimated income under $3,000, while approximately the same percentage has an income over $10,000. In 1970, there were 436 employers in Caldwell County who employed four or more employees. The combined labor force employed by these employers was 17,308. Annually, $93,956,244 in wages was paid with an average weekly wage payment of $104.73.

Household furniture manufacturing is the leading industry in the county with 28 establishments employing 7,839 workers at an annual payroll or $42,766,100. Textiles and textile products comprise the second largest category of industries with annual wage payments of approximately $15,000,000. In general, manufacturing constitutes 58.5 percent of the total employment in the county, of which furniture manufacturing comprises 61.1 percent and textiles 21 percent. Approximately 40 percent of the total employed are in non-manufacturing categories. The furniture and textile industries show no signs of decreasing growth (McClure and Bullard, 1972). Because of the high percentage of industrial jobs within the county, the project concentrated on developing an industrial based work experience program with two major industries, textile and furniture manufacturing.

Another area of concern referred to in the project proposal concerns job placement services for students. The educational activities in the curriculum attempt to build attitudes, skills, and knowledge such that the student will be well prepared for the transition from school to work. The typical high school however, stops short of a systematic effort in job placement. (Task Force on Career Information, Placement, and Follow-up, N.C. State Department of Public Instruction, 1972).

This project has attempted to design a system wide placement service for school systems of similar size and economic capabilities that is based on the assumption that job placement is a systematic effort desiring such assistance at any exit point into any career goal. Following the research efforts of the Caldwell Career Education Project, (Waters, Charles E., Comprehensive Research Model in Career Education, Final Report, Lenoir, N.C.: Caldwell Career Education Project, 1974), which stated that counselors should assist all students in selecting and making necessary adjustments in preparing for careers which will insure placement upon leaving school in either a job and/or additional education. The following is a breakdown of the organizational structure of the placement service developed under the Caldwell Career Education Project which was used as a take off point for our present unit wide placement service:

> The counselor assists students in selecting and enrolling in post-secondary education. This is accomplished by recurring information on admission requirements, financial aid, and school catalogs for student use. Students entering the world of work may need assistance from the counselor in getting a job. If they decide to enter the job market upon graduating, awareness of job opportunities should be provided for them. The counselor can initiate and complete this service by locating students who are interested in employment either full-time or part-time; conducting a survey of employment needs in business and industry; informing the students of the job availabilities; and using introductory or referral cards when sending a student for an interview.

The Guidance Oriented Alternative Work Experience Project was not designed to provide more of the same programs that we have always had. The project is designed to use the best ideas that years of research have brought to our state and nation, to research new and better ways of training, to place the responsibility of guidance, counseling, placement and follow-up on the school, and to share the demands of training and development of skills with industry and business.

b. Goals and Objectives of the Project

1. To determine the extent to which a comprehensive career guidance program has been developed within Caldwell County High Schools.

2. To determine the extent to which a model job placement program has beem implemented to serve all high school students within the Caldwell County School System.

3. To determine the extent to which model work experience programs have been established in the areas of textile and furniture manufacturing that will provide the skill, development, and job climate necessary to achieve and maintain meaningful employment in local industries.

4. To determine the extent to which a follow-up study of the work experience students, regular I.C.T. students who were randomly selected in the control group, and all 1974-1975 high school graduates of Caldwell County Schools has been established in order to determine the success of these people in terms of salary, job mobility, etc.

c. Description of the General Project Design and Procedures Followed

The following chronological program description of the Guidance Oriented Alternative Work Experience Project was based primarily on detailed daily activities taken from quarterly reports submitted during the period from July 1, 1974 to June 30, 1975 along with personnel daily logs covering the period from July 1, 1974 to June 30, 1976.

Since Caldwell County Schools underwent a merger with the former Lenoir City School System on July 1, 1974, as well as the retiring of the county school superintendent, Mr. E.M. White on June 30, 1974, the project was delayed two weeks in getting started. The new superintendent of schools, Dr. Gerald D. James, made a change in the project director from Charles E. Waters to William S. Stone. Stone officially became the new project director on July 19, 1974, and the project got underway.

The first action taken by the project director was to seek out and hire a staff of professionals who could operate effectively as a team in accomplishing the objectives of the program. The project staff is broken down into four main areas which are: Furniture Work Experience, Textile Work Experience, Job Placement, and Career Guidance. The administrative structure of the Guidance Oriented Alternative Work Experience Project is shown in Figures 1-4, pages 19-22.

The project director is responsible directly to the Superintendent of Schools, but has been assigned to work under the Director of Occupational Education since the project is accepted as an integral part of the total occupational effort being conducted in this school system. The project director has a secretary and a research assistant to assist him in the various reporting functions of the project. In the schools, the project is divided into areas of responsibility with each coordinator assuming responsibility for his or her area and reporting directly to the project director.

Project Personnel and Job Descriptions

Project funds support six full time staff members with the county furnishing an additional member from local funds.

Project Staff	Months Employed
Project Director	24 months
Project Secretary	24 months
Research Assistant	16 months
Textile Coordinator	12 months

Furniture Coordinator	12 months
Career Counselor	10 months
Placement Coordinator	Furnished through local funds

Job Descriptions

Title: Director of the Guidance Oriented Alternative Work Experience Program and Follow-up Study
Date Employed: July 1st, 1974
Duties: 1. Primary Function:

To administer a work experience program in accordance with Board of Education and U.S. Office of Education rules and regulations and to provide leadership in the development and improvement of the Guidance Oriented Alternative Work Experience Program and Follow-up Study.

2. Organizational Relationships:

a. Report and account for the operation of the work experience project to the U.S. Office of Education and to the Superintendent of Caldwell County Schools.

b. Work with and through principals in the implementation of a comprehensive program.

Major Responsibilities

3. Instructional Services

a. Assume responsibility for the quality of the instructional program concerned with the Guidance Oriented Alternative Work Experience Project.

b. Provide for staff involvement in evaluating present programs.

c. Assist staff in determining objectives and procedures for program improvement.

d. Coordinate the planning and development of curriculum in the work experience area.

4. Staff Personnel Services

a. Coordinate the employment, placement, scheduling, and evaluation of work experience project personnel.

b. Provide guidance and supportive services that lead to improved job performance of staff members.

5. Community Relations

a. Organize and maintain active advisory committees.

b. Assist in interpreting the program to the Community which it serves.

Related Major Responsibilities

6. Budgeting and Accounting

a. Development of Guidance Oriented Alternative Work Experience Budget.

b. Develop necessary accounting procedures.

c. Work with coordinators, teachers, and principals in selecting and purchasing materials and equipment for the program.

7. Planning and Research

a. Perform the necessary research to give positive direction to the program.

b. Develop immediate and long-range plans for the program.

c. Develop a continuing evaluation procedure.

d. Assist in planning and modifying facilities for the program.

8. Records and Reports

a. Develop a system of record-keeping.

b. Assume leadership in compiling the necessary data for local, state, and federal reporting.

9. Additional Responsibilities:

a. Approve all project expenditures in accordance with local, state, and federal regulations.

b. Perform other duties assigned by the U.S. Office of Education or the Superintendent of Caldwell County Schools.

The duties of the furniture and textile coordinators are identical and are presented her only once.

Title: Textile Coordinator
Date Employed: August 1, 1974

Title: Furniture Coordinator
Date Employed: August 1, 1974

Duties:

1. Coordinate a work experience class which includes providing both general related and technical related instruction during morning class hours and supervising these student on the job during each afternoon.

2. Develop an individualized curriculum for use in industrial work experience programs.

3. Meet with community advisory committess which have been established by the director in conjunction with the principals.

4. Renew and evaluate new instructional materials for classroom use and to inform principals and teachers of these materials.

5. Assist in planning, implementing and directing in-service training for professional and para-professional personnel.

6. Serve as public relation agents in disseminating school information to the community and others.

7. Assist in compiling the necessary data for local, state, and federal reporting.

Title: Career Counselor
Date Employed: August 19, 1974
Allocation of time per week: Lenoir High 35%; Granite Falls 35%; Hibriten High 10%; Hudson High 10%; Gamewell Collettsville 10%

Duties:

1. Work with the textile and furniture coordinators in seeking out new innovations in guidance as related to work experience programs.

2. Initiate individual career exploration through career tapes and discussions.

3. Assist vocationally undecided students through vocational testing.

4. Work with all secondary guidance personnel in seeking out better methods of career guidance.

5. Conduct and tabulate all pre- and post-testing for the project.

Title: Research Assistant
Date Employed: September 1, 1974
Duties:

1. Assist in the collection of project data.

2. Assist in the writing of the project reports.

3. Assist in the development and writing of an individualized curriculum for industrial work experience programs.

4. Serve as a resource person to both the textile and furniture coordinators.

5. Perform any other duties assigned by the project director.

Title: Job Placement Coordinator
Date Employed: August 1, 1974
(Paid out of local funds)
Duties:

1. Organize the structure of a unit wide job placement program.

2. Initiate the placement activities through the guidance offices in all five Caldwell County High Schools.

3. Serve as a resource person in providing training to personnel in North Carolina in the area of Job Placement Services.

4. Develop and write a job placement handbook for other school units to use in initiating their own programs.

5. Serve as a liason person between the school system and business and industry in Caldwell County in promoting job placement services for high school students.

Personal Data on Project Staff

1. Appointed as Director of the project is William S. Stone, a native of Surry County, NC. He received his A.B. Degree from the University of North Carolina, Chapel Hill, NC and his M.A. Degree in school administration from Appalachian State University in Boone, NC. Before accepting the position as Director, Stone was the Assistant Director of the Caldwell Career Education Project of the Caldwell County Schools.

2. Mrs. Martha A. Barnes, the Career Counselor is a native of Gainesville, Georgia. She attended Mercer University, Macon, Georgia and obtained her B.S. and M.A. Degrees in Guidance and Counseling from Appalachian State University in Boone, NC.

3. The Research Assistant for the project is Mrs. Debra Pennell. She is a native of Caldwell County where she completed her education in the public schools. Mrs. Pennell received her B.S. Degree in Business Education from Appalachian State University, Boone NC. Prior to joining the project, Mrs. Pennell was a part-time instructor and research assistant with Caldwell Community College.

4. Mr. Michael K. Holt is the textile coordinator for the project. Mr. Holt is a native of Alamance County. He received his B.S. Degree from Appalachian State Univeristy, Boone, NC. Before accepting the position with the project, Mr. Holt had served as the Industrial Cooperative Training Coordinator at Granite Falls High School.

5. Mr. William White is the furniture coordinator for the project. He holds a B.S. Degree in Industrial Arts from Appalachian State University, Boone, NC. Prior to joining the project, Mr. White was self-employed with White and Dougherty Construction Company.

6. Mr. Burl Duncan is the Placement Coordinator for the project. He is a native of Huntington, West Virginia. He received his B.S. Degree and M.S. Degree in Guidance and Counseling from Marshall University, Huntington, West Virginia. Before accepting the position with the project, Duncan was the job placement coordinator with the Caldwell Career Education Project.

7. Miss Rebecca A. Robbins was the project secretary. She is a native of Caldwell County. Having graduated in 1974 from Caldwell Community College, she holds and A.S. Degree in Library Technology.

8. Miss Tamara S. Hamby became the project secretary on July 1, 1975 after Miss. Rebecca A. Robbins was promoted to executive secretary to the Caldwell County Board of Education. Miss Hamby graduated from Gamewell-Collettsville High School in 1975 with a consentration of business courses. She is now attending Caldwell Community College at night studying in the secretarial area.

After the project staff was hired the next obstacle to be faced was the choice of a sight or sights to place the work experience program. Granite Falls High School was chosen as the site for the textile center of the county and the school was very receptive to the idea. On August 8, 1974, a meeting was held with the leading textile industrialists in the county and the textile program was born. Burlington Industries, both the Caldwell and Rhodhiss Plants, and Shuford Mills Inc. were selected as the textile training sites for the Granite Falls High School students.

Lenoir High School was chosen as a site for the furniture program because it is virtually surrounded by furniture manufacturing and there was no industrial cooperative program at the school so it had the greatest need. Training sites for the furniture program are Fairfield Chair Company - Plant 1; Singer Furniture Company - Plants 6 and 7; and Bernhardt Industries - Plant 1.

The most important task after site selection was the recruiting of students. All junior and senior records were reviewed and a prospective list of names was compiled. A letter was prepared and sent to these students introducing the program. Follow-up telephone calls were made to the students inviting them to come by and talk about the new program. The recruiting and interviewing continued into the first week of school. By the end of the first week of school, the membership in the work experience project at Lenoir High School was 22 and 26 at Granite Falls High School. A list of the student involved in the work experience area of the project with their training stations is in Appendix A.

Two Advisory Committees have been appointed for the project by the Caldwell County Board of Education. One committee deals with the textile work experience program, while the other is involved with the furniture program. Membership of these committees was determined by each industry involved, submitting names to the project director, who in turn made recommendations to the local Board of Education. These committees have been busy researching for ways to create better communication between schools and industry. A list of the members of the advisory committees can be found in Appendix B.

After the work experience programs were underway, the career counselor took a random sample of students from the regular industrial cooperative programs in the county who were working in the textile and furniture industries. This group thus became the control group. The pre-test instruments and the Tennessee Self-Concept Scale. These tests were administered during October, 1974,

and also during May, 1975, as a post-test to both control and experimental groups (25 students at Granite Falls High School and 22 at Lenoir High School make up the experimental group with 47 students randomly selected from Hudson, Hibriten, and Gamewell-Collettsville High Schools in the control group). Each person in both the control and experimental groups are being given individual counseling sessions to reveal and explain the results of this testing. The experimental group has also been given a series of various tests. The results of the pre- and post-testing, as well as other testing information concerning tests given to the experimental group, are found in Appendix C and D.

After several meetings with the guidance personnel in the county school system, the suggestion was made that the project in its career guidance function, consider looking at ways to compile data on student interest. In this endeavor, the project staff tested all 10th grade students in Caldwell County Schools using the Kuder Vocational Preference Test. The results are found in Appendix E. The project staff is still in the process of searching for detailed recommendations concerning the use of this interest data in program planning.

Also in the area of career guidance in Caldwell County, it was decided that a great need existed in eighth grade orientation. Many of the students enter high school with little or no knowledge of existing occupational programs offered at the high school level. This has caused undue pressure in the area of career counseling on the high school guidance team. The project has undertaken to develop an orientation package that will make eighth grade students aware of the occupational courses available before they register for high school. The package consists of a booklet on occupational education. The booklet has been distributed to eighth students in the Caldwell County Schools. A copy can be found in Appendix F.

The Job Placement program was already developed by the director in another Part C project, but was only associated with two schools. This placement program was the beginning point in designing the structure of the present unit-wide placement program serving 3,500 students through five high schools. The placement coordinator involved the existing high school counselors in this effort as they designed the structure of the program. A description of the placement program can be found in Appendix G and a Progress Report in Appendix H.

In August, the placement coordinator conducted a follow-up study of all 1974 graduates of the Caldwell County Schools. The results and instrument used are found in Appendix I. The 30% responses was very disappointing, therefore a direct telephone follow-up study will be made with the 1975 graduates. Also newspaper coverage of the project can be seen in Appendix J.

From July 1, 1975 till June 30, 1976, the project staff was reduced to the Director, Research Assistant, Project Secretary, and Placement Coordinator. The Job Placement Service, during the 1975 - 76 school year really began to come into it's own. A Job Placement Booklet was developed and distributed to school districts across Western North Carolina. (Appendix G). Visitors from Catawba, Wilkes, Cabarrus, Forsyth, Surry, New Hanover, and Iredell counties representing school systems in those counties came to see the Job Placement Program in operation.

Field Test of Individualized Work Experience
Materials July 1, 1975 - June 30, 1976

Schools Involved	ICT Students Involved
Hibriten High School	44
Gamewell-Collettsville High	28
Granite Falls High School	44
Hudson High School	65
Total	181

From July 1, 1975 till August 18, 1975, the project staff prepared kits of the individualized materials for industrial cooperative programs for each of the 181 students enrolled in the four county high schools. Beginning August 19, 1975, each industrial cooperative teacher began to use the individualized general related curriculum (Appendix K). This material was well received with the teachers from the first day on. The teachers reported that this material freed them from the lectur approach and enabled more individualized instruction. Activity 1 of each "lap" deals with the text material while the Activity 11 section is involved with "hands-on" activities. The North Carolina State Department of Instruction was involved in the field testing of this curriculum. Copies of this curriculum were made available to other school units in Western North Carolina.

Bernhardt industries of Lenoir, N.C., working with the project staff developed a furniture training manual using 63 of their employees to assist in this effort. (Appendix M) From this manual which was distributed to all industrial cooperative programs in the Caldwell County Schools as well as the NC State Department of Public Instruction, Bernhardt Industries developed the idea of a management training program for high school industrial cooperative students. This proposal was presented to the Caldwell County Board of Education on February 2, 1976. The program, which is a direct outgrowth from the Work Experience Project will begin with the school year 1976-77. (A brochure explaining this program can be seen in Appendix N).

In the area of career guidance, the project consentrated in the field of student drop-out prevention during the 1975 - 76 school year. Since Caldwell County has one of the worst drop-out problems in North Carolina, the project staff felt a real challenge in trying to design sound procedures to get at this problem. The project director contacted Dr. Kenneth Jenkins, who was principal of North Miami Beach High School and is now Assistant Dean of the College of Learning and Human Development at Appalachian State University. Dr. Jenkins had a good background in

drop-out prevention and agreed to serve as a project consultant in this field. After the project staff reviewed the records of the student drop-out population from the Caldwell County Schools for school year 1974-75, it was determined that no progress could be made towards reducing the drop-out rate, currently reported by the N.C. Department of Public Insturction at 47%, until an identification process had been developed.

d. Results and Accomplishments of the Project

The project has developed an individualized curriculum for the general related instruction of industrial work experience programs. This curriculum was developed in a target school situation during the 1974-75 school year and field tested in all industrial cooperative program areas in the Caldwell County School System during the 1975-76 school term. This curriculum can be seen in Appendix K.

The project has developed technical training manuals in the area of textile and furniture manufacturing through a cooperative effort between the project staff and Bernhardt Industries of Lenoir, NC; Shuford Mills Inc. of Hickory, NC; and Burlington Industries Fabric Plant in Rhodhiss, NC. These manuals can be seen in Appendix L and Appendix M. As an outgrowth from the Furniture Manual, Bernhardt Industries has developed an open ended management training program for cooperative student in Caldwell County for the school year 1976-77.

The project has developed an occupational handbook for use in eighth grade classes to improve the occupational orientation of students preparing to enter high school. (Appendix F)

The project has utilized an interest test in program planning. All 10th grade students in the Caldwell County Schools were given the Kuder Vocational Preference Test and the results were tabulated on a unit wide basis. These results, found in Appendix E, have been distributed to administrators and program planners in the Caldwell County School System.

The project has developed a Job Placement Program designed to serve the needs of small school districts in the area of vocational placement. A booklet has been designed to explain this program to other school systems in order to make this program transportable at a minimum cost. This document can be seen in Appendix G.

The project has developed a computerized drop-out identification system designed to assist school systems to compile already available educational data into a format that will identify with students who exhibit characteristics of a drop-out as well as show the areas of educational problems so proper planning can occur to direct resources towards student needs. This system along with system wide data from an identification of 1190 students in Caldwell County Schools during January 1976 can be seen in Appendix O.

The project developed a discipline code of conduct for teachers, parents, and students which was approved by the Caldwell County Board of Education. This code was designed to improve communications in the area of discipline problems which are closely associated with the high drop-out rate in Caldwell County. (Appendix P)

e. Evaluation of the Project

The State Occupational Research Unit's Director, Dr. Charles Rogers, was called in during August of 1974, by the project director for help in discussing plans for initiating an evaluation proposal. The following procedures were followed:

1. The State Occupational Research Unit Director recommended that only institutions in the near by area be considered to do the evaluation because of the limited $4,355.00 budgeted for the evaluation.

2. The project director chose to negotiate a contract in lieu of formal advertising because of the few agencies in the Caldwell County area that could handle the job and because the amount budgeted for the evaluation would limit agencies beyond a 50 mile radius. Following 100a.105 Negotiated Procurements of the General Provisions for Programs of the Office of Education, the project director began to seek an evaluator within a fifty mile radius of Caldwell County.

3. The local community college was contacted about doing the evaluation, but the close relationship between the project director and the director for research at the community college over the last few years would seem to limit the objectivity of the evaluation.

4. Appalachian State Univeristy, Boone, NC, is the only state university within fifty miles of Lenoir, The university indicated an interest in doing the evaluation. Because of their interest and their physical closeness to Caldwell County, an evaluation contract was awarded to them for $4,335.00. The contract can be seen in Appendix Q. This contract was approved on October 25, 1974, by the Caldwell County Board of Education.

5. Appalachian State University Scheduled an on-site visitation for April 16, 1975 and an agenda of this visitation can be found in Appendix R.

6. A final evaluation report has been prepared by Appalachina State University as the third party evaluator under separate cover from this report.

f. Conclusions, Implications, and Recommendations for the Future

A team approach to work experience programs where students in a class are divided into teams that operate as a unit on the job has proven to be a very effective training method.

The use of individualized curriculum materials in the work experience class will allow each student to work at his own pace without regard to where his classmates are in the test; will allow the instructor to be free to personally help studetns who are having problems; and will provide a more efficient use of time that will allow more technical follow-up instruction related to the student's work to take place.

The use of interest data on students compiled on a system wide

basis is one effective ingredient in program planning.

The Unit Wide Job Placement Service described in this report in Appendix G can be operated at a very affordable cost of one person's salary for ten months employment per year for every 3,500 students served.

The use of craft instruction as a regular part of the curriculum for work experience programs with emphasis on quality construction of items being made will stimulate student interest, reduce absenteeism, and discourage drop-outs.

No drop-out prevention effort can be very effective until a legitimate method of identifying potential drop-outs can be made and then gear program development to meet the needs of these studetns. The identification process described in Appendix O in this report is based on characteristics of potential drop-outs described in almost all studies on drop-out prevention such as low IQ, low reading level, poor attendance, low grades, lack of motivation to achieve, etc. These characteristics are then validated by using the student's permanent folder as the major source of information as well as his teacher's observation. This process requires little teacher time, is inexpensive, and generates essential data to begin effective drop-out prevention program development.

APPENDIX B

Project Advisory Committees

ADVISORY COMMITTEE

FOR

GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROGRAM

Foreword

This advisory committee will be composed of key laymen and educators who will provide communicating lines between project activities and the community, thereby assisting educators in improving ongoing programs from information gained in the research project.

I. Purposes of the Committee

The main purpose of the advisory committee is to establish communications between the project and the community whereby the quality of the Alternative Work Experience Program may be maintained and further improved.

In order to accomplish its intended purpose, the following functions are recommended:

A. To serve in a counseling and consulting capacity for the Alternative Work Experience Program.

B. To assist the project staff in the following activities:

(1) Planning activities which will be of interest and value to students

(2) Revising the program to meet the changing needs of students

(3) Developing and conducting a good public relations program

(4) Conducting community surveys

C. To evaluate the Alternative Work Experience Program.

This should be done continuously in order to ascertain whether the program is meeting the needs of students.

II. Organizational Structure

A. Membership: Membership on the committee shall be limited to individuals recognized as leaders and successful in his or her chosen profession and who have time to participate in scheduled meetings. The size of the committee will be not more than ten members plus the project director.

B. Appointment: Members on the committee will be appointed by the Caldwell County Board of Education following consultation with each prospective member to obtain his willingness to serve.

C. Term of office: Members should be appointed for the duration of the project.

D. Officers: The officers of the committee shall consist of the chairman, vice-chairman, and secretary. The committee as a whole will elect its own chairman and vice-chairman with the secretary being the co-op coordinator.

E. Duties of officers:

(1) Chairman: The primary responsibility of the chairman is to preside at all committee meetings, to appoint all short term sub-committees, to represent this committee when it is deemed desirable or necessary, and call special committee meetings.

(2) Vice-Chairman: Assume all the responsibility of the chairman in his or her absence and any other duties

assigned by the chairman.

(3) Secretary: The primary responsibility of the secretary is to take and record the minutes of each meeting and to notify members of the time, date, and location of each meeting.

APPENDIX C

Results of Pre- and Post-Testing

SUMMARY OF PRE-TESTING

The pre-testing period was completed in four weeks (schedule sheet attached). The experimental ICT students were tested on both the MVII and TSCS tests October 1-11 and the control groups in four high schools from October 14-25. The time involved was approximately two (2) hours for both tests.

Two (2) pre-tests were selected. The Minnesota Vocational Interest Inventory (MVII) is an instrument modeled after the Strong Vocational Interest Blank (SVIB), but uses tradesmen in general as the reference group, rather than professional and businesses occupations. There is a cross reference with the Occupational Outlook Handbook and the Dictionary of Occupational Titles (DOT) codes. The test contains 158 items for a selection of the most liked and the least liked on each item. The MVII shows examinee's degree of liking for certain general kinds of work activities common to several occupations. The Tennessee Self-Concept Scale (TSCS) goes on the hypothesis that "other things being equal, the more optional the self-concept the more effectively the individual will function." The TSCS consists of 100 items to be rated on a 1-5 scale. (More detailed information available.)

Other tests will be administered to the Experimental ICT students during the school year. These will include: personality tests; Eysenck Personality Inventory (EPI), Multiple Affect Adjective Check List (MAACL), Taylor Manifest Anxiety

Scale (TMAS), Mooney Problem Check List; interest and value tests; Gordon Occupational Check List, Allports' Study of Values; aptitude tests; Armed Services Vocational Aptitude Battery.

Along with the research value, the results will be used as a counseling aid.

PRODUCT EVALUATION

Procedure

During October, 1974, the experimental and control groups for the evaluation were chosen and tested. The students participating in the Guidance Oriented Alternative Work Experience Program at Lenoir and Granite Falls High Schools comprised the experimental group. The control group was selected by securing the names of all students working in furniture and textile related jobs enrolled in regular industrial cooperative training classes from the four high schools where these programs existed. The number of available subjects in furniture totaled fifty-nine. In order to have each school represented, the only two furniture ICT students at Hibriten High School were automatically selected along with twenty other furniture ICT students selected at random from the remaining total of fifty-seven. Thus, twenty-two regular ICT furniture students were chosen to correspond to the twenty-two participants enrolled in the Guidance Oriented Alternative Work Experience Program in furniture at Lenoir High School.

The number of available subjects in textiles was forty-two. Again, in order that each school be represented, two of the four textile ICT students at Hibriten High School were selected at random as well as two from the five textile ICT students at Gamewell-Collettsville High School. The remaining twenty-two subjects were chosen at random from the remaining textile ICT subject pool. Again, twenty-six textile students were randomly chosen to correspond to the twenty-six students participating in the Alternative Work Experience Program in textiles at Granite Falls High School. The final make-up of the control group by school may be found in Table I.

During October, 1974, both the experimental and control groups were administered the Minnesota Vocational Interest Inventory (MVII) and the Tennessee Self Concept Scale (TSCS). During May, 1975, the post-testing of the experimental and control groups was carried out. Several experimental and control subjects were lost in the post-testing for various reasons. Tables I, II, III, and IV present a summary of these reasons and the number of subjects tested in each of the groups.

TABLE I. SUMMARY OF THE NUMBER OF SUBJECTS PER CELL FOR THE ANALYSIS OF THE DATA.

	Pre-Test		Post-Test	
	MVII	TSCS	MVII	TSCS

APPENDIX E

Results of Kuder Tests

INTERESTS OF SOPHOMORES
CALDWELL COUNTY SCHOOLS
1975

There are many and varied determinants of vocational and personal choices and these become very strategic as the students embarks on his high school years. Grades 9-12 often and hopefully form crucial years as the student becomes more serious and aware of abilities, interests, cultural and educational determinants in making personal, social and educational decisions about his life. Interests play a major part in these choices. In an effort to do a better job in program planning and guidance, the Caldwell County Schools are taking a new look at student's interests.

The Kuder General Interest Inventory was selected as the tool for determining interests, the sophomores in the county as the target subjects. Five High Schools (Gamewell-Collettsville, Hibriten, Granite Falls, Hudson, and Lenoir) participated in this effort, testing 863 students. The material and statistical analysis were furnished by the Guidance Oriented Alternative Work Experience Project.

Opportunity was made available for each student to talk with the counselor in his school about the results of the test.

The mean, standard deviation and percentile were run on the subjects and charts were plotted indicating the mean scores for male and female in each high school. Additional computations brough out the mean scores for the projected high schools; Gamewell-Collettsville and Lenoir (West); hibriten; and Hudson and Granite Falls (South).

The data showed a similarity in interests across the county with highest area for females being outdoor, mechanical, artistic,

and musical. Even though there were some interesting differences, it would be difficult at the present time to relate a "why".

Outdoor, artistic, musical, and social services comprised the top four interest areas for the males. A very similar profile resulted among the schools except a shart incline in the scientific area at Granite Falls High School (whose program does participate in many extra projects and club activities.)

Additional information was provided each principal, giving the exact number of students who scored above the 75th percentile (high interest) in each of the ten areas. (attached)

What are some of the values of this type of study:

1. Student's awareness of his own interest areas.
2. Counselor's contact with each interested individual student who took the test.
3. Recognition by perceptive teachers of opportunities within the classroom in given areas.
4. Possible course selections to be offered.
5. Striving toward unification of schools or unification efforts.
6. First effort for county wide testing results.

Projection:

As these are interest areas, it would be advantageous to correlate achievement and aptitude with these results, using the standardized tests that are given within the high schools.

Continuing research and finding such as these will provide lasting aids to students and faculties toward better education throughout Caldwell County.

Caldwell County Schools

"Highlights of Occupational Education"
A guidebook for eighth grade students.

APPENDIX G

"Job Placement - Caldwell County Schools"

A transportable model of a unit wide placement service for small and rural school districts.

JOB PLACEMENT

CALDWELL COUNTY SCHOOLS

INTRODUCTION

In one form or another, schools are the focal point for occupational information. Job placement has long been an integral part of both Occupational Education and Guidance Programs.

Caldwell County Schools, through a federal occupational research project under Public Law 90-576, Part C, entitled "Guidance Oriented Alternative Work Experience Program and Follow-up Study," have developed a unit wide job placement program utilizing one placement coordinator. This booklet is designed to show procedures used in the implementation of this unit wide job placement program.

Project Number: V0180VZ

Grant Number: OEG-0-74-8580

For further information, contact:

William S. Stone, Director
Work Experience Project
Caldwell County Schools
P.O. Drawer 1590
Lenoir, North Carolina 28645

Acknowledgement

Special recognition and acknowledgement is given to Brian Watson and Pumroy Bolick for the illustrations contained in this booklet. Both are students of Hibriten High School; Lenoir, North Carolina.

Purpose

The purpose of this booklet is to demonstrate to school administration the existence of an accelerated student interest in job placement and to provide suggested procedures to implement a placement service.

Objectives

I. To provide Occupational Guidance and Placement Assistance to any and all interested students.

II. To promote a better relationship between the school system and the general public including business and industry.

III. To strengthen school guidance programs by offering a more complete service to the students.

Why?

Why should school systems seriously consider job placement services for their students?

I. To satisfy an interest and need that has been shown through student response.

II. To assist underprivileged and lower income students meet financial demands of both school and personal activities.

III. To render Occupational Guidance as it relates to career planning so that career choices may be made prior to, not after, graduation.

IV. To assist in the reduction of the school drop-out rate.

V. To aid in the development of a sound Public Relations Program.

WHO?

Who should assume the responsibility for implementing and maintaining an effective job placement service in the schools?

I. Organizing a placement service to meet the needs of all students should be the responsibility of a placement coordinator.

A. The Coordinator's Functions:

1. Make job availability surveys in the community to determine job openings and specific requirements.

A. By telephone

b. In personal contacts.

Coordinator Student Employer

2. Conduct student surveys to discuss employment interests and job availabilities. Student conferences should be held during study halls, homeroom periods, and release periods only.

3. The matching of job openings to the student's career choice should be accomplished if at all possible. For example, the right slot for a particular career choice.

B. The Coordinators Role:

1. Reports to the director of Occupational Education on all matters relating to placement activities.

2. Acts as liaison between the school and the business community.

3. Coordinates with principals, counselors, faculties, and students on matters pertaining to placement.

4. Works in conjunction with (not in competition with) the regular work-study program coordinators.

A Team

1. Guidance Personnel
2. Cooperative Teachers
3. Placement Coordinator

C. The Coordinators Qualifications:

1. A masters degree in guidance and counseling is preferrable but not essential.

2. Demonstrated ability and desire in working with people is absolutely essential.

3. Previous experience in business industry or sales work is desirable.

HOW?

How does a school system go about setting up a job placement program?

The following procedures may be used for the organization of a placement service in any given school system:

1. Employment of a placement coordinator to work with all secondary schools in the system.

2. Once employed and established, the coordinator should conduct a student survey to determine those interested in employment.

3. Each student is then requested to complete a registration form (Personal Data Sheet).

PERSONAL DATA SHEET

_____ Student's Name

_____ Name of H.S.

Personal Information

Grade: _____ Age: _____ Today's Date _____
Height: _____ Weight: _____ Social
Date of Birth: _____ Security Number: _____

Placements:
1. _____
2. _____
3. _____

Education Courses

Check the following Occupational Education Courses you are now taking and show number of years taken for each course:

Course	No. of Yrs. Taken	Course	No. of Yrs. Taken
1. Agriculture _____	_____	9. Home Economics _____	_____
2. Bricklaying _____	_____	10. Health Occupations _____	_____
3. Carpentry _____	_____	11. I.C.T. _____	_____
4. D.E. _____	_____	12. I.V. _____	_____
5. Drafting _____	_____	13. Office Occupations _____	_____
6. Electrical Wiring _____	_____	14. Typing _____	_____
7. Electronics _____	_____	15. Shorthand _____	_____
8. Graphics _____	_____	16. Other _____	_____

Work Experience

1. Name of Organization _____ Dates of Employment _____
2. Name of Organization _____ Dates of Employment _____
3. Name of Organization _____ Dates of Employment _____

Class Schedule

Period	Subject	Room No.	Period	Subject	Room No.
1st	_____	_____	5th	_____	_____
2nd	_____	_____	6th	_____	_____
3rd	_____	_____	Homeroom	_____	_____

Can you provide your own transportation to and from work? _____

**********Do Not Write in Space Below**********

1. Referral _____ Comments _____
2. Referral _____ Comments _____
3. Referral _____ Comments _____
4. Referral _____ Comments _____
5. Referral _____ Comments _____

4. After the student survey is made, the coordinator should contact local businesses and industries for job openings. Individual employee card files should be maintained and periodically up-dated.

5. It is then necessary to re-contact those students interested in employment. The matching of job openings to student's pre-selected career choices should be made whenever and wherever possible. Issuance of employment referral cards similar to those used by state employment agencies have proven helpful.

EMPLOYMENT REFERRAL

This will introduce: _____

Who is a _____ at _____

Student is an applicant for position of: _____

Work Experience Consists of: _____

School Courses Consists of: _____

_____

Student's Signature

To report for Interview: _____

Comments: _____

Burl Duncan, Place Coord.
Caldwell County Schools

6. Follow-up studies with students and employers (telephone) should then be contacted to determine those that were employed and the reasons for those that were not.

7. The program can be easily evaluated. A brief review of the coordinators daily logs will quickly show whether or not the stated objectives have been met. The coordinator's records could easily be his (her) continuing self-evaluation. In addition, school administrators may wish to interview principals, faculty, and students to ascertain the effectiveness of the program.

WHAT?

What would be the anticipated costs of implementing a job placement service in a school system?

To pinpoint with exactness the cost of establishing a placement service is difficult. Too much depends on the size of the system in terms of the number of secondary schools and total enrollment. However, from all indications the cost is relatively small when viewed from the stand point of increased student benefits and improved community relations.

In most instances, the employment of a placement coordinator certified in the vocational area is all that is required. This would hold especially true in small to intermediate school systems where no more than five secondary schools are involved.

WHEN AND WHERE?

If your school system is interested in making academic and occupational services to students more complete;
If your system is interested in implementing a service that could help reduce the drop-out rate;
If your system is interested in improving the school image in your community;
If you are interested in a low cost service which strengthens your guidance programs;

THEN:
You should consider job placement services as a real option!

APPENDIX I

Student Follow-up Instrument and Results of 1974 study.

MEMO

TO: All Secondary School Principals and Guidance Offices

FROM: Burl F. Duncan, Placement Coordinator

SUBJECT: Occupational Survey for the class of 1974

Please refer to our memo dated August 21, 1974 advising each principal of our intention to initiate an occupational survey of the graduating class of 1974.

Responses have been received, tabulated and results of which are attached for your records.

Caldwell County Schools

SUMMARY

Total contacted in county	750
Total responded to survey	196
Percentage of response	26%

Gamewell-Collettsville High School

Total number of students contacted	109
Total number of responses	21
Percentage of response	19%

Granite Falls High School

Total number of students contacted	113
Total number of responses	26
Percentage of response	23%

Hibriten High School

Total number of students contacted	145
Total number of responses	43
Percentage of response	29%

Hudson High School

Total number of students contacted	268
Total number of responses	81
Percentage of response	30%

Lenoir High School

Total number of students contacted	115
Total number of responses	25
Percentage of response	21%

Gamewell-Collettsville High School

SUMMARY

Total number of students contacted	109
Total number of responses	21
Percentage of response	19%

The foregoing results of the occupational survey may be summarized as follows:

52% of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

32% enrolled in an institution of higher learning with the majority of students attending Appalachian State University and Caldwell Community College and Technical Institute.

0% of the graduating class entered the military.

94% of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 4% felt that it offered little assistance or was totally worthless.

The majority of students felt that all departments had met their expectations.

Recommendations were to make the school curriculum:

(19%) more academically oriented.
(61%) more occupationally oriented.
(19%) remain as it is.

Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

1. Should have more occupational courses to prepare students who go directly to work after graduation.

2. Should have better teacher/student relations.

3. Should have better facilities and more materials for students to use.

4. School should be given more money so that the students would not have to spend so much time fund-raising for things that they need.

Granite Falls High School

SUMMARY

Total number of students contacted	113
Total number of responses	26
Percentage of response	23%

The foregoing results of the occupational survey may be summarized as follow:

38% of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

64% enrolled in an institution of higher learning with the majority of students attending Appalachian State University and Caldwell Communtiy College and Technical Institute.

0% of the graduating class entered the military.

83% of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 10% felt that it offered little assistance or was totally worthless.

The majority of students felt that all departments had met their expectations.

Recommendations were to make the school curriculum:
(15%) more academically oriented.
(42%) more occupationally oriented.
(30%) remain as it is.

Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

1. Should get the students more involved in school system.

2. Have more field trips and labs so students can put to use what they have learned.

3. Should offer more business courses for boys also.

4. Teachers, principal, and students should learn to work together.

Hibriten High School

SUMMARY

Total number of students contacted	145
Total number of responses	43
Percentage of response	29%

The foregoing results of the occupational survey may be summarized as follows:

41% of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

59% enrolled in an institution of higher learning with the majority of students attending Appalachian State University , Caldwell Community College and Technical Institute, and University of N. C. at Chapel Hill.

1% of the graduating class entered the military with most students going into the Navy.

71% of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 17% felt that it offered little assistance or was totally worthless.

The majority of students felt that all departments had met their expectations.

Recommendations were to make the school curriculum:
(27%) more academically oriented.
(44%) more occupationally oriented.
(25%) remain as it is.

Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

1. Teachers should work more with the students and have better understanding.

2. Should offer more occupational courses.

3. Should give more money to the music department.

Hudson High School

SUMMARY

Total number of students contacted	268
Total number of responses	81
Percentage of response	30%

The foregoing results of the occupational survey may be summarized as follows:

41% of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

55% enrolled in an institution of higher learning with the majority of students attending Appalachian State University and Caldwell Community College and Technical Institute.

1% of the graduating class entered the military with most students going into the Navy.

70% of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 18% felt that it offered little assistance or was totally worthless.

The majority of students felt that all departments had met their expectations.

Recommendations were to make the school curriculum:
(23%) more academically oriented.
(60%) more occupationally oriented.
(14%) remain as it is.

Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

1. Should improve on overcrowded situations.

2. Teachers should be more interested in their work and make the students more involved.

3. Should give students more voice in school activities.

Lenoir High School

SUMMARY

Total number of students contacted	115
Total number of responses	25
Percentage of response	21%

The foregoing results of the occupational survey may be summarized as follows:

28% of the graduating class entered into employment after graduation with a salary range of $2,500 - $5,000 per year.

76% enrolled in an institution of higher learning with the majority of students attending Appalachian State University, University of N. C. at Chapel, and East Carolina University.

1% of the graduating class entered the military with most students going into the Marines.

76% of those who responded felt that the current curriculum was sufficient in preparing them for their occupational choices while 12% felt that it offered little assistance or was totally worthless.

The majority of students felt that all departments had met their expectations.

Recommendations were to make the school curriculum:
(44%) more academically oriented.
(16%) more occupationally oriented.
(36%) remain as it is.

Some of the more prevalent ideas and suggestions in making school more meaningful and relevant are as follows:

1. Have closer student/teacher relationships.

2. Have more activities for the students.

3. All administrative personnel and faculty should strive for a better balance between leniency and discipline.

4. Have more various types of courses.

Occupational Survey
for the
Graduating Class of 1974

Name _____ High School Attended _____

EMPLOYMENT

1. Are you currently employed on a full time basis?
   Yes_____
   No _____

2. State name of your employer: _____
   When were you employed? _____
   What is your title? _____
   What are your duties or responsibilities? _____
   _____
   Please check your expected annual salary range:
   ( ) $ 00. —$ 1000.
   ( ) $1000. —$ 2500.
   ( ) $2500. —$ 5000.
   ( ) $5000. —$ 7500.
   ( ) $7500. —$10000.
   ( ) over $10,000.

3. Did you encounter difficulty in securing employment?
   Yes_____
   No _____

4. Check method(s) used in obtaining employment:
   ( ) Applied directly to employer.
   ( ) Referred to employer by friends or relatives.
   ( ) Referred to employer by the N.C. State Employment commission.
   ( ) Referred to employer by the school.
   ( ) If none of the above state the method you used in getting your job. ____
   _____

5. Would you say that you:
   ( ) Are extremely pleased with your job.
   ( ) Are moderately pleased with your job.
   ( ) Think of it as an average job, just somewhere to work.
   ( ) Dislike your job.
   ( ) Have intense dislike for your job.

6. Do you feel your chances for advancement are:
   ( ) Good
   ( ) Average
   ( ) Poor

7. Do you consider your duties to be:
   ( ) Extremely hazardous
   ( ) Fairly safe
   ( ) Completely safe

8. Would you recommend your job and your employer to your friends?
Yes _____ Explain _____
No _____ Explain _____

EDUCATION

9. Are you currently enrolled in a:
( ) 4-year college
If so give name of college. _____
( ) 2-year college or technical institute
If so give name of institution. _____
( ) Trade school
If so give name of school. _____
( ) None of the above.

10. When will you start college? _____

11. What is your anticipated graduation date? _____

12. Please state your major course of studies. _____

13. What is your minor? _____

14. Please indicate the reason(s) for your occupational choice: _____
_____
_____

15. If you attend an institution out of the Caldwell County area do you plan to return to the county to work in your chosen field?
Yes _____
No _____

U. S. MILITARY

16. Did you enter the military after graduation?
Yes _____
No _____

17. Check your branch of service
( ) Army
( ) Navy
( ) Air Force
( ) Marine Corps

18. Do you tentatively plan a permanent career in the military?
Yes _____
No _____
If not what is your expected discharge date? _____

19. While in service are you now or will you be working toward a specific skill?
Yes _____
No _____
If yes indicate the skill _____

20. If you do not stay in service on a permanent basis will you return to Caldwell County to work?
Yes _____
No _____

21. If college is planned state your college preference: _____
_____

OCCUPATIONAL PREPARATION

22. Regarding school preparation for your occupational choice please check one of the following that is most appropriate to you.
( ) High School curriculum (courses) was extremely beneficial.
( ) High School curriculum (courses) was more than adequate.
( ) High School curriculum (courses) was adequate.
( ) High School curriculum (courses) offered very little assistance.
( ) High School curriculum (courses) was totally worthless.

23. Would you prefer to see the high school curriculum:
( ) More academically oriented?
( ) More occupationally oriented?
( ) Remain as it is?

24. Did the following departments in high school meet with your expectations?

English Dept. Yes _____ No _____
Explain _____

Math and Science Dept. Yes _____ No _____
Explain _____

Social Studies Dept. Yes _____ No _____
Explain _____

Business Dept. Yes _____ No _____
Explain _____

Vocational Dept. (including Home Ec.) Yes _____ No _____
Explain _____

Guidance Dept. Yes _____ No _____
Explain _____

25. Please offer your comments, ideas, and suggestions as to how school administration in meeting the needs of all students could make school more meaningful, more relevant, and more interesting.

_____
_____
_____

Thank you for your cooperation.

APPENDIX K

Individualized Curriculum for Industrial Work Experience Programs

UNIT 1

Orientation

UNIT I: Orientation

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will understand the concept of Vocational Education as it relates to himself, school, parent, and employer. Evidence of this knowledge will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with the definition, purpose, and types of vocational education.
2. To give the student in the Industrial Cooperative Training Program an orientation.
3. To provide the student with an understanding of the Industrial Cooperative Training Program, and a knowledge of his responsibilities in the program, as a part of his total educational program.
4. To introduce the student to the Vocational Industrial Clubs of America.

INTRODUCTION:

Vocational education is concerned with teaching students about the world of work. It is designed to develop skills, abilities, understandings, attitudes, work habits, and appreciations encompassing knowledge and information. Vocational education is an integral part of the total educational

program and contributes toward the development of good citizens by developing their physical, social, civic, cultural and economic competencies.

There are six formal divisions of vocational education: Agricultural Education, Business Education, Distributive Education, Home Economics Education, Trade and Industrial Education (including Trade Preparatory and Industrial Cooperative Training), and Vocational Guidance.

TIME TO WAKE UP!

ACTIVITY I

You must complete (A) and then, you may choose any four of the following activities.

A. Read pages 1 - 23 in the General Related Curriculum Guide, Volume 1, or pages 1 - 2 in the World of Work, 1st Edition, or pages 1 - 9 in the World of Work, 2nd Edition. (Encyclopedias may be used to answer some of the questions in Activities I and II.

B. Using your text or encyclopedias as a reference, define the following acts:

Smith-Hughes Act
George-Dean Act
George-Barden Act
The G. I. Bill of Rights
The National Defense Education Act
Manpower Development and Training Act of 1962
Vocational Education Act of 1963

C. Write a short paragraph on the history of Industrial Cooperative Training.

D. List at least five requirements for being eligible to be a student in Industrial Cooperative Training.

E. What does VICA mean to you?

F. Familiarize yourself with the following necessary records and forms. Write a brief description of each one:

a. Daily Work Sheet
b. Training Agreement
c. Progress Report
d. Training Plan

ACTIVITY II

Choose two of the following activities.

A. You have just been elected President of your local VICA Chapter, list some things you could do to make your VICA Chapter Number 1.

B. List all vocational courses taught at your school, and interview at least one vocational teacher concerning the subject matter taught in that course. Write a paragraph concerning your findings.

C. Write a short summary on the job you would like to have and explain why.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Ask the Local Director of Occupational Education to come and speak to your class on the different occupational areas that are available in your county.

SUGGESTED RESOURCE PERSONNEL

Area Director of Occupational Education

Local Director of Occupational Education

EVALUATION

Ask your instructor for the "Orientation" quiz to see how much knowledge you have obtained from this lap.

UNIT I

ORIENTATION QUIZ

Fill in the blanks

1. _____ education is concerned with teaching students about the world of work.

2. An _____ was a young boy who was taught a trade by a master craftsman while he lived and worked for the master.

3. Poor Europeans who could not afford passage to the new world often became _____ servants in order to gain passage to the new world.

4. The _____ system was the system of producing goods before the Industrial Revolution.

5. The _____ Act of 1917 was the first national Vocational Education Act.

6. The _____ Bill of Rights provided educational training benefits for veterans.

7. _____ Florida was the sight of the first D.O. (ICT) program.

8. A student-learner must be at least _____ years old before he can be a part of the ICT program.

9. I.C.T. stands for _____.

10. In I.C.T., you should work at least _____ hours per week.

11. In I.C.T., you must not work more than _____ hours per week.

12. You get _____ units credit for I.C.T.

13. You get _____ units credit for I.C.T. II.

14. I.C.T. class work is divided into _____ related and _____ related materials.

15. List two things you must have before you go to work.

A. _____ permit (if under 16)
B. _____ card.

16. The youth organization of I.C.T. students is the _____ Club.

17. The _____ is a worker who has satisfactorily completed his apprenticeship and is classified as a skilled worker in his trade.

<u>True-False</u>

_____1. The Industrial Revolution came to an end in 1944.

_____2. The factory system was destroyed by the Industrial Revolution.

_____3. The I.C.T. program was once known as D.O.

_____4. You are not required to work during school holidays.

UNIT I

ORIENTATION QUIZ

Fill In The Blank

1. Vocational
2. apprentice
3. indentured
4. domestic
5. Smith-Hughes
6. G. I.
7. Jacksonville
8. 16
9. Industrial Cooperative Training
10. 15
11. 25
12. 2
13. 3
14. general and technical
15. workers permit
    social security
16. VICA
17. journeymen

True-False

1. False
2. False
3. True
4. False

UNIT II

Employment

UNIT II: Employment

PREREQUISITE: None

TERMINAL OBJECTIVE:

After the completion of this unit, the student will recognize the concepts of applying for and obtaining employment. Evidence of this knowledge will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To aid the student through counseling by the I.C.T. coordinator to select the vocation he is best physically and mentally suited to pursue.
2. To acquaint the student with available sources of employment information.
3. To develop fundamental techniques in acquiring a job.
4. To bring out the importance of professional growth and loyalty to the employer.

INTRODUCTION:

Selecting the way to earn one's living in our democratic society is probably one of the most important decisions that one will have to make in his lifetime. More occupations are open to young people today than ever before. Deciding upon a lifelong job is more difficult than it used to be. Occupational opportunities in the United States today range around 30,000.

ACTIVITY I

You must complete (A), and then you may choose any <u>four</u> of the following activities.

A. Read pages 24 - 47 in the <u>General Related Curriculum Guide</u>, Volume I, or pages 38 - 64 in the <u>World of Work</u>, 1st Edition, or pages 10 - 27 and 37 - 41 in the <u>World of Work</u>, 2nd Edition.

B. In choosing the right vocation, what are some questions one should consider?

C. For most people the main value of a well-chosen occupation is the personal satisfaction it gives them. List some personal traits you should consider about yourself.

D. Name several routes you could take if you were looking for a perspective job.

E. What is a data sheet, and what are the four classifications of information which should be included in a data sheet?

F. For an interview, what papers should you take with you?

7

ACTIVITY II

Choose two of the following activities.

A. You are to choose a job from the SRA Job Experience Kit on something that would be of interest to you. Below is a list of jobs from the SRA Job Experience Kit. Choose a job that you think you might be interested in learning more about. Look at the job as a game. Do the best you can for your own satisfaction. THIS IS NOT A TEST.

Accountant Kit	Police Officer Kit
Automobile Mechanics Kit	Sales Person Kit
Beautician Kit	Secretary Kit
Designer Kit	Truck Driver Kit
Electronic Technician Kit	Veterinarian Kit
Elementary School Teacher Kit	X-Ray Technician Kit
Lawyer Kit	Appliance Serviceman Kit
Library Kit	Carpenter Kit
Medical Technologist Kit	Draftsman Kit
Motel Manager Kit	Plumber Kit

B. Suppose that you are an employer for a local industry, and you have an opening. What would be some of the characteristics that you would look for in a perspective employee?

C. Suppose you are going for a job interview. Fill out the accompanying data sheet and application form. When completed, this will aid you in your interview. (Ask your instructor for these forms.)

D. Save the "Help Wanted" ads from your newspaper for one week. Determine which jobs are available in each of the following categories: Professional, technical, managerial, clerical, sales, etc.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Ask an Employment Interviewer from your local Employment Security Commission to come and speak to your class on the job opportunities available in your community.

SUGGESTED RESOURCE PERSONNEL

Career Counselor

Employment Interviewer

Information Clerk

Job Analyst

EVALUATION

When you have completed this lap, ask your instructor for the "Employment" quiz, and see how much knowledge you have obtained from this unit.

UNIT III

You, Your Employer, And Your Co-Worker

BEST COPY AVAILABLE

UNIT III: Needs and Responsibilities of the Worker

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will better understand his position as an employee and the relationship between him, his employer, supervisor, and co-workers. Evidence of this knowledge will be shown by a score of 80 percent onthe post-test.

AIMS AND OBJECTIVES:

1. To enable the student worker to establish good relationships with his employer, supervisor, and fellow workers.
2. To teach the student that certain duties and responsibilities on the part of the worker are necessary for good rapport.
3. To enable the student worker to hold and advance on the job due to having good rapport.

INTRODUCTION:

It is the duty of an employee to please his employer. It has been said that getting along with a supervisor is an art.

Showing a willingness to learn is one of the best ways to have a good relationship with your employer. If you do not understand something about your job, ask questions.

Intelligent questions show eagerness and willingness to learn.

Not only does an employee need to satisfy his employer, he must try to get along with his fellow workers. In order to acquire this ability, you must learn to think of people as individuals, to be able to put yourself in another persons place, and to want sincerely to get along with others.

ACTIVITY I

You must complete (A) and then you may choose any two of the following activities.

A. Read pages 49 - 57 in the General Related Curriculum Guide, Volume I, or pages 67 - 82 in the World of Work, 1st Edition, or pages 50 - 60 in the World of Work, 2nd Edition.

B. It pays to develop a certain sensitivity to the moods of your supervisor. How can you, as an employee, be aware of the moods or feelings of your supervisor.

C. There are many personal qualities that an employer likes to find in his employees. List a few of these.

D. Tardiness and absenteeism have certain short and long term effects. List some of these effects. How could you, as an employee, control tardiness and absenteeism?

ACTIVITY II

Choose three of the following activities.

A. You have just been employed to work for a large industry. The boss is a rather nice person, but everyone seems to talk about him to you when he is not around. How do you think you would react to this situation?

B. Select a partner and role play an interview. Use the tape recorder and tape the interview, then play it back, having the class point out the mistakes made by the participants.

C. Draw cartoons to illustrate three duties and responsibilities of the worker. With the assistance of the classmates, decide proper captions for each.

D. Tell about your actual work experiences in small groups (2 or 3 people). For example: some of the experiences you have had delivering papers, baby sitting, being a bag boy, sales clerk, working in textile or furniture industries, etc.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Since most everybody in the class will have a different employer, decide which employer you would like to invite to your classroom as a guest speaker. Ask him to build his speech around "Employer-Employee" relationships.

SUGGESTED RESOURCE PERSONNEL

Guidance Counselor

Job Supervisor

Personnel Manager

Training Director

EVALUATION

When you have completed this lap, ask your instructor for the "Needs and Responsibilities of the Worker" quiz and see how much knowledge you have obtained.

UNIT III

YOU, YOUR EMPLOYER, AND YOUR CO-WORKER

Discussion

1. How can an employee be more productive?

2. Why should an employee be aware of the moods or feelings of his supervisor?

3. What does an employer expect from you and why?

4. What are some of the results of being tardy to work?

5. What steps should you follow when you terminate your employment?

Fill In The Blanks

7. Most of our employment today is based upon the _____ law.

8. One of the greatest virtues an employee can have is being _____ to his employer.

9. Try never to assume a _____ ____ ____ attitude.

10. _____ means being late for work.

UNIT III

YOU, YOUR EMPLOYER, AND YOUR CO-WORKER

1 - 5 questions are for discussion. Answers are to be left to the discretion of the instructor.

Fill In The Blanks

7. unwritten

8. loyal

9. know-it-all

10. Tardiness

UNIT IV

Agencies Affecting Employment

UNIT IV: Agencies Affecting Employment

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will beemore aware of the federal and state regulations on employment. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with child labor laws in the early 19th Century and today.
2. To acquaint the student with the contents of the Federal Labor Standards Act.
3. To familiarize the student with the federal and state labor agencies as they affect industrial education.

INTRODUCTION:

During the beginning of the labor movement, there were very few rules enacted. In the early part of the 19th Century, experienced manpower was scarce and child labor was cheap. As a result of this, children had to work very long hours. Poor working conditions for children prevailed. These children had very little time for education because of the number of hours spent on the labor force.

Due to the theory that free people needed an education, child labor laws sprang into existence. By 1870,

several states had prohibited the hiring of children under 12 years of age. Improvements in child labor laws were made gradually as the public became more aware of the effects of child labor.

ACTIVITY I

You must complete (A) and then you may choose any five of the following activities.

A. Read pages 60 - 65 in the General Related Curriculum Guide, Volume 1, or pages 417 - 420 in the World of Work, 1st Edition, or pages 302 - 307 in the World of Work, 2nd Edition. (Also, encyclopedias or reference books may be needed).

B. In the early 19th Century, children were poorly educated. List some of the reasons for this.

C. There are laws in effect today that states certain provisions in which a child can work. If an employer violates any portion of the child labor provisions, what can the federal government do to this individual?

D. What does the Federal Wage Law provide?

E. An apprentice is a worker of legal age employed to learn a skilled trade in conformity with the standards set forth by the Bureau of Apprenticeship and Training, United States Department of Labor. List some of these standards.

F. The sub-minimum wage certificate discussed previously is applicable to the apprenticeship program, also. A joint apprenticeship committee established to direct the training of apprentices must also keep records. What are some of these records?

G. The Federal Minimum Wage changes occasionally. At the present time, what is the minimum wage that can be paid to an employee?

ACTIVITY II

Choose two of the following activities.

A. There are many special child labor regulations. Find out all the information you can regarding this situation. Report to your class on your findings. You may obtain this information from the encyclopedias in your library or home.

B. Discuss how an increase in population will create a demand for more service workers of all types. Discuss and report on changes in population in your community.

C. You are to choose a job from the SRA Job Experience Kit on something that would be of interest to you. Below is a list of jobs from the SRA Job Experience Kit. Choose a job that you think you might be interested in learning more about. Look at the job as a game. Do the best you can for your own satisfaction. This is not a test.

Accountant Kit
Automobile Mechanics Kit
Beautician Kit
Designer Kit
Electronic Technician Kit
Elementary School Teacher Kit
Lawyer Kit
Library Kit
Medical Technologist Kit
Motel Manager Kit
Police Officer Kit
Sales Person Kit
Secretary Kit
Truck Driver Kit
Veterinarian Kit
X-Ray Technician Kit
Appliance Serviceman Kit
Carpenter Kit
Draftsman Kit
Plumber Kit

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

There are laws regarding the legal regulations affecting employment of student-learners. Ask an attorney or a Juvenile court judge to come and speak to the class on this subject. Write a short report on his speech.

Visit a business or industry in your community which is cooperating with the State Apprenticeship Division. Ask the employer or the apprentice to come and talk with your class on this subject. Write a short summary on the speakers report.

What do you think are the pros and cons of owning and operating a business? Talk with an employer and get his opinion. Give a short report to the class.

SUGGESTED RESOURCE PERSONNEL

Attorney

Juvenile Judge

EVALUATION

Ask your instructor for the "Agencies and Child Labor" quiz, to see how much knowledge you have obtained from this lap.

UNIT IV

AGENCIES AFFECTING EMPLOYMENT

True-False

_____ 1. In the early part of the 19th Century, child labor was very expensive.

_____ 2. Children were forced to work exceedingly long hours in unsafe working conditions for very little pay.

_____ 3. Children in the 19th Century received a very good education.

_____ 4. The federal age limit requirements vary according to the size of the individual.

_____ 5. A minimum age of 16 is required before a worker can engage in jobs listed as hazardous for minors.

_____ 6. Certain occupations and businesses are required by the federal wage law to pay employees a basic minimum wage.

_____ 7. School hours combined with actual work hours should not exceed 30 hours during a five-day week.

Fill In The Blank

8. Child labor laws sprang into existence because of a deep rooted American principle that free people needed _____.

9. An _____ is a worker of legal age employed to learn a skilled trade in conformity with standards set forth by the Bureau of Apprenticeship and Training, United States Department of Labor.

10. The _____ sets minimum ages for the employment of minors in commerce.

UNIT IV

AGENCIES AFFECTING EMPLOYMENT

True-False

1. False
2. True
3. False
4. false
5. False
6. True
7. False

Fill In The Blank

UNIT V

Labor Unions

UNIT V: Labor Unions

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student will have a better understanding of labor unions and their importance to you as an employee. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To learn how labor unions came into existence.
2. To recognize what the American Federation of Labor (AFL) stands for and its purpose.
3. To learn some of the tactics used by unions to achieve their demands.
4. To become aware of the three types of shops as related to union rules.

INTRODUCTION:

Organizations whose aims are to improve working conditions and better pay are the labor unions. Historically they stem from the guild system of Europe during the middle ages. The growth of labor unions is the greatest during times of prosperity.

Labor unions have many tactics they use to achieve what they are after, such as general strikes, boycotts, picketlines, and wildcat strikes. It is the job of management to employ ways to counteract the strikes and boycotts of the union members.

The labor unions, over a period of years, have been instrumental in achieving higher wages, shorter hours, improved working conditions, support for public education and vocational training, the outlawing of child labor, and improved safety conditions.

ACTIVITY I

You must complete (A) and then you may choose any <u>six</u> of the following activities.
of the

A. Read pages 65 - 67 in the <u>General Related Curriculum Guide</u>, Volume 1, or pages 83 - 85 in the <u>World of Work</u>, 1st Edition, or pages 59 - 60 in the <u>World of Work</u>, 2nd Edition. (Encyclopedias may be used.)

B. Labor unions represent a special interest group of vast importance, socially, economically, and politically. When did they first appear in America?

C. When was the American Federation of Labor organized and why?

D. There are many tactics used by unions to achieve their demands. List <u>four</u> of these. Also, describe the <u>four</u> strike methods used.

E. We have talked about some of the tactics that the unions use, describe some of the tactics used by management to counteract the strikes and boycotts of the union members.

F. What is the CIO and why was it organized?

G. The Labor Movement was further strengthened when Congress passed a certain act in 1947. What was the act and describe it in detail?

H. As an employee, how would the open shop, the union shop, and the closed shop affect you in each particular situation?

ACTIVITY II

Choose <u>three</u> of the following activities.

A. This activity will require a great deal of research and plans, but the results should be very enlightening. Plan for a debate on the following topic: "Why I Think I Should (or Should Not) Join Labor Unions After I Graduate From High School." There are several books in the school library that you can check out or encyclopedias available for your use. List the sources that you used in making your decision.

B. Using magazines and newspapers, make a scrapbook of articles dealing with general strikes, boycotts, picketlines and wildcat strikes. This may include any information you can find on this subject. Also, you may use pictures and illustrations.

C. By way of the press or other news media, find out who is the present leader of the AfL-CIO and write a short bibliography on him, including what he has done for this organization.

D. Going back to the beginning history of the American Labor Movement, trace the development through to the present time.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite a Business Agent from the Local Union office to come to your class to speak about the history of the labor union.

SUGGESTED RESOURCE PERSONNEL

Business Agent

College Teacher of Labor Relations

Labor Arbitrator

Labor Relations Director

Lawyer

Personnel Director

School Administrator

EVALUATION

To see how much knowledge you have obtained from this lap, ask your instructor for the "Labor Unions" quiz.

UNIT V

LABOR UNIONS

Fill in the blanks

1. In 1886, the _____ _____ of _____ was organized and combined the small craft and trade unions together into the first federation of unions.

2. Some of the tactics used by unions to achieve their demands are _____, _____, _____, and _____.

3. A _____ is the refusal of union members to purchase goods produced by union plants.

4. A _____ occurs when strike workers parade in front of a plant to prevent non-union employees from working.

5. The _____, drawn up by management, was a list of undesirable workers usually circulated from plant to plant.

6. Three types of shops are defined by management and labor as the _____, _____, and the _____.

True-False

_____ 7. The yellow dog contract was an agreement signed by a prospective worker stating that he would not join a union while employed at that plant.

_____ 8. The Congress of Industrial Organizations (CIO) organized in 1935 in an effort to consolidate people employed in mass production industries.

_____ 9. The Taft-Hartley Act guaranteed the right of workers to organize and bargain collectively.

_____ 10. The CIO and AFL, at first, were rival federations.

UNIT V

LABOR UNIONS

Fill In The Blanks

1. American Federation of Labor
2. strikes, boycotts, picketlines, wildcat strikes
3. boycott
4. sitdown strike
5. blacklist
6. open shop, union shop, closed shop

True-False

7. True
8. True
9. True
10. True

UNIT VI

Employment Security Commission

UNIT VI: Employment Security Commission

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, you should become more aware of the importance of the Employment Security Commission and the Industrial Commission. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To become more acquainted with the functions of the Employment Security Commission.
2. To obtain an awareness of the unemployment insurance program.
3. To acquaint the student with the functions of the Industrial Commission.

INTRODUCTION:

The Employment Security Commission is a job service employment program. It provides placement services by keeping a list of available jobs in local industry to aid those looking for work. They also provide a testing service to see what your abilities and interests are.

Another act that is most important for employers is the Workmen's Compensation Act. This act is an insurance plan paid for by employers to protect their employees against accidental injury on the job.

ACTIVITY I

You must complete (A) and then you may choose any three of the following activities.

A. Read pages 68 - 70 in the General Related Curriculum Guide, Volume 1, or pages 299 - 310 in the World of Work, 1st Edition, or pages 237 - 246 in the World of Work, 2nd Edition.

B. In your opinion, what do you think are the two basic services offered by the Employment Security Commission?

C. What are some of the qualifications that you must have in order to be able to receive unemployment insurance?

D. Write a short paragraph including all the information that you have learned about Workmen's Compensation.

E. What are the two types of coverage offered by Workmen's Compensation?

ACTIVITY II

Choose two of the following activities.

A. Using the library resources (encyclopedias, reference books, etc.), find all the information that you can covering the subject, "Workmen's Compensation," and write a report on your findings.

B. Stimulate your interest in job tasks by writing a theme on the differences or similarities in diverse occupations, for example, plumbers vs. doctors.

C. Think for a few minutes about your future as a career person. Select two or three occupations which might be of interest to you. Prepare a scrapbook by making a description of the job, including the title of the job, kind of work done, tools used, skills or knowledge needed, and different levels available.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite a counselor from the Employment Security Commission to speak to your class on the services offered by that agency.

SUGGESTED RESOURCE PERSONNEL

Employment Counselor

Labor Relations Specialist

Personnel Clerk

Training Officer

EVALUATION

To measure the knowledge that you have obtained from this unit, ask your instructor for the "Employment Security Commission" quiz.

UNIT VI

EMPLOYMENT SECURITY COMMISSION

True-False

_____ 1. If an employee is unwilling to work, he is eligible for unemployment insurance.

_____ 2. All occupations are covered by unemployment insurance.

_____ 3. The worker cannot receive unemployment insurance if he quits his job voluntarily without cause.

_____ 4. Student-learners are automatically qualified to receive unemployment insurance because of non-availability for full-time employment.

_____ 5. The amount of payment received from unemployment insurance depends on what the worker earned during the base period.

_____ 6. Workmen's Compensation is an insurance plan paid for by employers to protect employees against accidental injury on the job and certain occupational diseases.

_____ 7. Agricultural, domestic, and federal workers are covered by the Workmen's Compensation Act.

_____ 8. To collect compensation under the provisions of the Workmen's Compensation Act the injured employee must give a written notice to the employer within 30 days from the date of the injury.

_____ 9. If death results because of injury on the job, benefits are payable only if a claim is filed with the Industrial Commission within one year.

Fill in the Blank

10. The _____ administers the Workmen's Compensation Act.

11. The _____ is a job service employment program which provides placement services by keeping a list of available jobs in local industry.

UNIT VI

EMPLOYMENT SECURITY COMMISSION

True-False

1. False
2. False
3. True
4. False
5. True
6. True
7. False
8. True
9. True

Fill In The Blank

10. Industrial Commission
11. Employment Security Commission

UNIT VII

Character Development And Personality

UNIT VII: Character Development and Personality

PREREQUISITE: None

TERMINAL OBJECTIVE:

After completing this unit, you should become more aware of the role that your personality can play in society in which you live. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with desirable character traits and personality factors.
2. To show the student the importance of a well-rounded person.
3. To develop within the student correct social habits, social behavior, and etiquette.

INTRODUCTION:

To get along most agreeably with the many different individuals whom we contact daily is recognized as the supreme problem facing mankind today. The answer to this problem is dependent upon how well we develop our character.

Character is something that you establish for yourself. You can change your character from weak to strong if you start early enough, but is must come from with. Improving your character is not only your biggest job in life, but it is a job which you should begin immediately.

ACTIVITY I

You must complete (A), and then you may choose any <u>five</u> of the following activities.

A. Read pages 73 - 85 in the <u>General Related Curriculum Guide</u>, Volume 1, or pages 122 - 133 in the <u>World of Work</u>, 1st Edition, or pages 82 - 90 in the <u>World of Work</u>, 2nd Edition.

B. List <u>ten</u> reasons why a person might have a bad character.

C. Suppose you think you have a bad character. Is it possible to change?

D. How do you think you might react to the following situation? You have just walked into a room, and you overhear two of your classmates talking about your best friend in a derogatory manner.

E. List several causes of job losses.

F. How can reading autobiographies of leaders help your ambitions?

G. What are several good personality traits to develop?

ACTIVITY II

Select four of the following activities.

A. Do you really know how you feel about yourself? Answer the questions on the "Self-Rating Form." (Ask your instructor for the form.)

B. This is an excellent opportunity for you to become "Character-Trait Conscious." Without pretending, keep a record of each opportunity you have to build good character traits this week. (Example: In what way can you show your loyalty to your employer.)

C. What do you think is the most important characteristic a person can have a why?

D. You are the owner of a small machine shop and you have a vacancy. What type of person would you prefer t to fill this position and why?

E. You have just started working in a local business and your best friend works there, also. On this particular morning when you came into work, you saw your best friend stealing $90 from the cash register and putting it into his pocket. What are you going to do?

F. After reading the chapter, you will find that there are no two personalities exactly alike. One person may be referred to as a pessimist, while the other may be referred to as an optimist. Explain the meaning of these two words. Which term do you think pertains to you?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Choose one of the resource personnel in the category below to come and speak to your class on the "Importance of a Good Personality" on the job.

SUGGESTED RESOURCE PERSONNEL

Boy Scout Professional Worker
Camp Counselor
Desk Clerk
Girl Scout Professional Worker
Peace Corps Volunteer
Industrial Personnel Director
Recreation Leader
Social Director
Stewardess
Waiter
Waitress

EVALUATION

To measure the knowledge that you have obtained from this unit, ask your instructor for the "Character Development and Personality" quiz.

"SELF RATING FORM"

DIRECTIONS: Rate yourself on each of the following items. Place a check mark (✓) in the appropriate column for each item.

	Terrible	Poor	Should be better	So-So	Fair	Good	Great
1. Appearance							
2. Personality							
3. Speaking ability							
4. Leadership ability							
5. Popularity							
6. Scholarship							
7. On the job performance (if employed)							
8. Ability to get along with others							
9. Attitude towards school in general							
10. Attitude towards job							
11. Attitude towards persons of the same age							
12. Attitude towards self							
13. Attitudes toward school subjects:							
English							
Math							
History							
Government							
Science							

	Terrible	Poor	Should be better	So-So	Fair	Good	Great
14. Attitude towards study (homework)							
15. Attitude towards school vacations							
16. Attitude towards teachers							
17. Attitude towards parents							
18. Attitude towards school administrators							
19. Attitude towards local gov't officials							
20. Travel experiences							
21. Home experiences							
22. Work experiences							
23. Social Experiences							
24. Recreational experiences							
25. Ability to read							
26. Ability to write and compose

34. Creativity							

UNIT VII

CHARACTER DEVELOPMENT AND PERSONALITY

True-False

_____ 1. You can change your character from weak to strong if you start early in life, but this change must come from within.

_____ 2. The most successful men have discovered their weak points in personality and have turned them into their best points.

_____ 3. Your appearance and voice has a lot to do with your personality in other peoples eyes.

_____ 4. To keep your reputation above reproach is a noble practice of life, which is certain to bring you rich rewards.

_____ 5. Courage is usually thought of in terms of physical bravery, however, moral and mental courage are equally important in our everyday life.

_____ 6. We cheat when we fail to do our best, both at school and at work.

_____ 7. Dishonesties can become habit forming.

_____ 8. One cannot possess good character unless he is reliable.

_____ 9. Employers hire, keep, and promote the person who is lazy.

_____10. One trait of good character is the ability to remain cool under tension and pressures.

_____11. Forethought and understanding are the keys in developing self-control.

_____12. Openmindedness is hearing all sides of any question before forming an opinion.

_____13. No person is independent of others and the person who tries to be will find simple survival to be very difficult.

_____14. The measure of the strength of your business or industry is the ability of the workers to say "I".

_____15. If you are to succeed on your job, you must work!

_____16. Strength overcomes weaknesses, and once we analyze our weakest personality and character traits, we gain strength in our entire being.

17. _____ is the quality of the forces or drives within a person.

18. _____ is what one sees of you, and character is the real you.

19. _____ is what one thinks of you.

20. There are several character traits that are desirable. List four of these.

1.

2.

3.

4.

UNIT VIII

Human Relations

UNIT VIII: Human Relations

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, you will have a greater awareness of the importance of human relations. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To become aware of the relationship between man and the society in which you live.
2. To understand the importance of good character.
3. To acquaint the student with some of the needs which are universal.

INTRODUCTION:

The success of one does not only depend upon what he knows, but how he conducts himself. The ability to get along with mankind is one of the keys to success. Good human relationships are important if you are to climb the ladder of success. The ability to get along well with other people is more important today than ever in the history of business and industry.

No two people are alike, but everyone has basically the same needs and desires. When you have an understanding of these universal needs, you will be in a better position to know more about people and how to improve your relationship.

ACTIVITY I

You must complete (A), and then you may choose any three of the following activities.

A. Read pages 85 - 101 in the General Related Curriculum Guide, Volume 1, or pages 138 - 149 in the World of Work, 1st Edition, or pages 104 - 111 in the World of Work, 2nd Edition.

B. Everyone has some of the same needs and desires. List and explain in your own words several of these desires or needs.

C. There are many positive and negative traits in which you may possess. Choose a few traits that you think would help you to have a better relationship with the people that you come into contact with, and let some of these become your goal. (Ask your instructor for the list of traits.)

D. Why would it be important for you to want to influence another person in your work situation?

E. Most people have feelings of insecurity. Do you agree? Why or why not?

ACTIVITY II

Choose two of the following activities.

A. Choose seven people (a fellow student, co-worker, teacher, parent, friend, etc.) and, ask them to describe the type of person they like best. Compare your findings with your classmates.

B. Have you ever thought about "how you feel" about certain issues? There are 50 questions confronting you with different lines of thought. Answer each question as accurately as you can. (Ask your instructor for these forms.)

C. Listed below are real-life situations. Select two of the following situations that you would like to comment on:

1. Suppose you are a guest and are served some weird-looking food you never saw before. What do you do besides worry?

2. How can you break that dead silence when you have just been introduced and neither of you can think of anything to say?

3. You are out on a date or at a dinner party and you suddenly realize that you are eating with the wrong fork. What then?

4. How do you introduce a person to a group?

5. Are introductions always necessary?

D. From references, interviews, and personal experiences, list differences in cultural values toward the use

of money, time, energy, and talents. Describe expectations for individuals to be self-supporting to contribute to society, to develop talents and skills, etc.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite a speaker to come to your class and talk with the class on the topic "Your Personality and Your Job."

SUGGESTED RESOURCE PERSONNEL

City Manager

Funeral Director

Guidance Counselor

Minister

Public Relations Man

Public Relations Specialist

Social Worker

Personnel Manager

EVALUATION

To measure the knowledge that you have obtained from this unit, ask your instructor for the "Human Relations" quiz.

POSITIVE TRAITS

(1) Ability to make friends

(2) Ambition and imagination

(3) Cooperation

(4) Initiative and self-discipline

(5) Interest and enthusiasm

(6) Learning to judge values

(7) Love of work

(8) Loyalty and fidelity

(9) Perseverance and patience

(10) Punctuality and foresight

(11) Resourcefulness and tact

(12) Thoroughness and efficiency

NEGATIVE TRAITS

(1) Carelessness

(2) Egotism

(3) Indecision

(4) Indifference

(5) Intolerance

(6) Jealousy

(7) Laziness

(8) Self-pity

(9) Stubbornness

(10) Vanity

DIRECTIONS: Read each of the following questions and think about it carefully. Then write "yes" or "no" in the space provided by each question. Answer as accurately as you can.

_____ 1. Do you feel uneasy when you are around people you don't know?

_____ 2. If you dislike certain people, do you know why?

_____ 3. Do people usually react favorably towards you?

_____ 4. Have you decided what you want to do after you graduate from high school?

_____ 5. Do you know what you like and what you don't like?

_____ 6. Do you find it difficult to admit that the other person is right?

_____ 7. Do you have difficulty deciding what to wear to school or work each day?

_____ 8. Do you like for people to notice you?

_____ 9. Do you feel uncomfortable when others compliment you?

_____10. Are you aware of what you say and do in the presence of others?

_____11. Do you usually speak to people before they speak to you?

_____12. When you observe a group of people whispering, do you think that they are talking about you?

_____13. Are you able to laugh at your mistakes?

_____14. When you receive a poor grade on an exam, do you usually try to determine why?

_____15. Are you usually suspicious of new people you meet?

_____16. Do you find it difficult to concentrate when you read?

_____17. Do you assume work responsibilities at home?

_____18. Are you bored when you are by yourself?

_____19. When things go wrong, do you look for ways to blame others?

_____20. Are you afraid to go to a restaurant by yourself?

_____21. Do you become depressed when you think about yourself?

_____22. Do you complain to others about your troubles?

_____23. Do you find it difficult to listen when others are speaking?

_____24. Do you become jealous when your friends compliment each other and not you?

_____25. Do you think that people misunderstand you?

_____26. Is it difficult for you to talk with others on topics that interest them and not you?

_____27. Do you do things that you normally wouldn't do in order to impress others?

_____28. Are you easily influenced by the attitudes and behaviors of others?

_____29. Do you put off going to the dentist because you fear pain?

_____30. Do you lose your temper often?

_____31. Do you think your parents trust you?

_____32. Do you usually go out of your way to help others?

_____33. When you feel depressed, do you understand why?

_____34. Do you enjoy teasing others?

_____35. Can you accept criticism without becoming angry or defensive?

_____36. Does it bother you to receive poor grades in school?

_____37. Do you regularly participate in active sports (tennis, bowling, swimming, golf, etc.)?

_____38. Are you frequently feel tired and worn out?

_____39. Is your body weight appropriate in relation to your height and bone structure?

_____40. Do you frequently feel tired and worn out?

_____41. Do you often suffer from colds and/or headaches?

_____42. Do you become nervous and tense when you are tested in school?

_____43. Do you usually achieve your personal goals?

_____44. Do you have difficulty making friends?

_____45. Do you have a friend that you can talk with and confide in?

_____46. Do you feel that you are above average in ability?

_____47. Do you often take your frustrations out on others?

_____48. At school or work, do you feel that you really aren't accepted by the others?

_____49. Do you have at least one hobby that you enjoy?

_____50. Are you able to adapt to most situations?

UNIT IX

How To Study

UNIT IX: How To Study

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will be able to demonstrate good study habits. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To work towards maximum student motivation for study habits.
2. To develop with the student the correct habits and techniques of studying.

INTRODUCTION:

The desire for good grades should make you, as a student, wish to study more. The importance of knowing how to study will affect you for the rest of your life. From the time that you are in the first grade of school until you finish your education, your grades are recorded and are available to would-be employers.

ACTIVITY I

You must complete (A), and then you may choose any <u>four</u> of the following activities.

A. Read pages 106 - 132 in the <u>General Related Curriculum Guide</u>, Volume I, or read the attached sheet, "How To Study."

B. In order to understand this chapter, you need a thorough knowledge of the vocabulary listed below. Define the following terms. (You may use a dictionary.)

1. Motivation
2. Aim
3. Objective
4. Prestige
5. Potential
6. Positive
7. Attitude
8. Distraction
9. Frequency
10. Recency

C. One of the keys to proper learning is the correct conditions of studying. List three of these.

D. In order to do well on an exam, you need to know how to study for it. List several ways in which you can study.

E. Every young person between the ages of 6 - 16 must attend school. Even though you are in school, this does not mean you are going to study, but in order to be successful in school, you will have to study. What are some of your reasons for studying?

ACTIVITY II

Choose two of the following activities.

A. Develop a study plan that will best meet your needs. Find your wasted time by dividing your day into 1/2 - hour segments, from the time you get up until you go to bed at night and write down what you do each hour.

B. Try three different types of note-taking for a week, each, in your English class. Report to the class each method you used and which worked best for you and why?

C. Try a new experiment. Attempt earnestly to follow the rules for effective study habits as given in this unit for two weeks. Report any improvement in your school grades to your coordinator.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

This unit is very important because your success, as a student, depends upon your study habits. Ask someone in your school to give a short speech on "The Importance of Studying."

SUGGESTED RESOURCE PERSONNEL

Guidance Counselor

Secondary Teacher

Librarian

EVALUATION

Ask your instructor for the "How To Study" quiz, and see how much knowledge you have obtained from this lap.

How To Study

Many people can tell you how to study, but until you are properly motivated to take the time to study, you never will. In this section, the object is to enlighten you on the subject of studying.

Just reading a book is not considered studying. You must decide to take the time each day and practice the necessary studying skills that make up what are called "good studying habits."

Suppose you are given a book on horse racing, and you read the book, completely from cover to cover. After completing the book, you feel very confident of your racing abilities. So you decide to enter your horse in a local race. What is going to happen? Chances are, you will probably not feel as confident as you did when you were reading about racing. In other words, you need plenty of practice in order to be able to study effectively.

When you begin a new school year, you need to start out trying to develop good studying habits, immediately. Have you ever noticed, school seems very simple at the beginning of the year, and at the end of the year, school seems to be a burden. The reason is because you have let everything go until the end. If you will only keep up your work, school will not be such a hassle. The answer to good studying habits is to make a time chart. Look at the attached time chart, and include all of your activities after you have completed your reading assignment. When you have completed your time chart, stick to it and make it a habit.

STUDENT ACTIVITY TIME CHART

Day Time	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunda
7:00 a.m.

UNIT IX

HOW TO STUDY

1. What is motivation and why is it the key to your success?

2. List five principles of learning?

3. List five helpful conditions of study.

4. Discuss several methods for improving your memory.

5. List five things that you should do to make your writing more effective.

6. List and discuss two methods of note taking.

7. List five steps one should take when studying a textbook.

8. How should you study for an exam?

9. What is the principle of frequency?

10. What is the principle of recency?

UNIT IX

HOW TO STUDY

This test is short answer questions. No answers will be set down for this exam.

UNIT X

Communication Skills

UNIT X: Communication Skills

PREREQUISITE: None

TERMINAL OBJECTIVE:

After completing this unit, you will have a greater awareness of the importance of communications. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with the basic skills of oral and written communications.
2. To develop leadership and create interest through member participation in speaking and writing activities.
3. To increase student confidence and competence in self-expression.

INTRODUCTION:

Communications is essential, because it is a means of conveying a message from one person to another. Since time began, man has been using all the ingenuity at his command to improve communications skills. Conversation is the most direct of all ways that human beings can communicate with each other. Communication skills are learned over a long period of time. A person's attitude while speaking and his voice quality have a great influence upon his listener. Since the whole atmosphere

of our lives can be affected by the impression we make on others, we need to think seriously about how we can improve our conversation.

ACTIVITY I

You must complete (A), and then you may choose any four of the following activities.

A. Read pages 2 - 11 in the General Related Curriculum Guide, Volume 2, or pages 132 - 134, 297 in the World of Work, 1st Edition, or pages 93 - 94 in the World of Work, 2nd Edition.

B. Communication is a means of conveying a message from one person to another. What are some of the requirements of a good conversation?

C. Characteristics of a person can be revealed by his voice. What are some qualities that we should avoid when speaking? Name some things that we should keep in mind about good speaking habits.

D. Differentiate between submissive and creative listening.

E. In a formal club meeting, parliamentary procedure should be followed. Name some points to remember about parliamentary procedure.

F. Proper telephone etiquette should be followed whether you are making a personal or a business call. List some rules of proper etiquette.

ACTIVITY II

Select any three of the following activities.

A. Prepare a 2-minute talk on some human interest topic related to your job. Tape your talk, play it back to yourself, and then make a list of any weaknesses in oral communication you might discover.

B. Listen carefully to your classmates and friends, and make a list of any "particular sayings" you might discover. Share these with your classmates and discuss methods for overcoming the use of particular sayings. In this instance, "particular sayings" will include any slang, colloquialism, or gestures which are habitually used.

C. Suppose you have just been voted in as the parliamentarian for a local club. What would your responsibilities be as the parliamentarian?

D. In today's society, the role expectations of men and women are changing. Explain this statement.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Contact your local Western Union office and make arrangements for your students to visit the office to learn about telegrams.

Invite one of the resource people below to come in and speak with the class about how communication skills plays an important role in the jobs.

SUGGESTED RESOURCE PERSONNEL

Cashier

General Office Clerk

Key Punch Operator

PBX Operator

Receptionist

Teletype Operator

Typist

EVALUATION

After you have completed this unit, ask your instructor for the "Communication Skill's" quiz, and see how much knowledge you have obtained.

UNIT X

COMMUNICATION SKILLS

True-False

_____ 1. Communication is a means of conveying a message from one person to another.

_____ 2. In the early stages of time, hands were probably used as much as the voice to convey a message.

_____ 3. The invention of writing first began when man drew crude pictures to express his ideas.

_____ 4. Communication skills are learned over a long period of time.

_____ 5. It is a good idea to bluff your way through a subject about which you have no knowledge.

_____ 6. Creative listening is concentration on an accurate grasp of what others say in order to repeat it correctly when necessary.

Discussion

7. There are six ways to learn to listen submissively. List three of these:

A.
B.
C.

8. We all engage in informal public speaking. For example, when we converse with a group of people and etc. List two other occasions when we use informal public speaking:

A.
B.

9. Name two occasions when we would use formal public speaking:

A.
B.

10. Proper telephone etiquette should be followed whether you are making a personal or a business call. List four rules to keep in mind when using the telephone:

A.
B.
C.
D.

UNIT X

COMMUNICATION SKILLS

True-False

1. True

2. True

3. True

4. True

5. False

6. False

Discussion

7. Find the central idea
   Make a mental outline
   Improve reception through practice
   Be a sponge
   Weigh evidence you assimilated
   Put into words and share with somebody

8. Speaking in a classroom
   Using the telephone
   Making introductions
   Making an oral application
   Job interview

9. Making an announcement
   Making an introduction
   Giving a welcome speech or response
   Making a speech of presentation or acceptance

10. Answer calls promptly
    Identify yourself at once
    Speak slowly, clearly, and distinctly, using a conversational tone
    Cultivate a cheerful tone of voice
    Be as courteous as you would be face to face
    Offer to take a message
    Record calls for persons not present
    Caller hang up first

UNIT XI

Effects of Radio, TV, and Motion Pictures as a Means of Oral Communication

UNIT XI: Effects of Radio, Television, and Motion Pictures As A Means of Oral Communications

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, you should become more aware of the various means of communications. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To emphasize the importance of quality in the various means of communications.
2. To create an understanding of the place and function of the mass media of communications in our society.
3. To develop an awareness of words, word usage, and pronounciation.
4. To emphasize the importance of letters of application and the personal data sheet.

INTRODUCTION:

The effects of radio, television, and motion pictures have been wide spread and numerous. All of these inventions have become an integral part of our system of education. Mass media had carried our education to the far corners of the world and has given us increased knowledge of cultures and people of the world and up-to-date knowledge of world events.

ACTIVITY I

You must complete (A), and then you may choose any five of the following activities.

A. Read pages 12 - 19 in the General Related Curriculum Guide, Volume 2, or pages 17, 33 - 41 in the World of Work, 1st Edition, or pages 26 - 27 in the World of Work, 2nd Edition.

B. List the three mass medias of communication that have become an integral part of our system of education.

C. What are the two main types of letters and explain the difference?

D. There are six main parts of a business letter. List these.

E. When one is writing a business letter, what are some requirements to keep in mind?

F. There are two basic letter styles used today. Name and describe these.

G. Differentiate between the telegram, day letter, and night letter.

ACTIVITY II

Choose any three of the following activities.

A. Listed below are some misspelled words. After reviewing the words from page 22, spell these words correctly, using a dictionary.

absensd	devellop
agrement	extravagent
beleive	pamplet
bookeeper	proced
changable	refered
clasroom	tarif
compeled	similiar
corresponent	familar
dangerus	valable

B. Write a business letter, using any style of your choice, in terms of the requirements discussed in this chapter, and make a thorough evaluation of your letter.

C. Fillout the "What's Your Telephone Score" and compare your score with those of your classmates. (Ask your instructor for the forms.)

D. In order to apply for a job, you need to know how to write a proper letter of application and a data sheet. Review the application letter in your textbook and then, write an application letter and a data sheet in the proper form. (Ask your instructor for the data sheet form.)

E. The following are examples of cases:

Jane is a pleasant girl with a smiling face. She typed 55 words a minute on the typing test, has had one year of bookkeeping, and two years of shorthand. She arrived for the interview five minutes late. Her grades were mostly B's and C's.

Susie arrived for the interview five minutes early. She seemed to be at ease with the interviewer and answered each question with confidence. She scored 45 words per minute on the typing test and her grades in school were mostly C's. She took two years of bookkeeping and one year of shorthand.

Gail was a very nervous girl, so she decided she would take a friend along for the interview. They arrived on time. She was poised, neat, and well dressed. On the typing test she scored 60 words per minute and her grades in high school were mostly C's. She took one year of bookkeeping and two years of shorthand.

Since you now have some of the facts, which girl would you prefer to have as your secretary? What additional information would you like to have had, if any?

F. Choose a recent TV program which was of interest to you, and why?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Take the students on a field trip to a local radio station. Ask the announcer to explain how a radio station operates.

To help the students become aware of the processes involved in making phone calls, take them on a field trip to the telephone office to see a telephone service with the students what they have learned and the different careers available in a telephone service.

SUGGESTED RESOURCE PERSONNEL

Actor - Actress

Auctioneer

Demonstrator

English Teacher

News Analyst

Public Relations Specialist

Secretary

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Effects of Radio, Television, and Motion Picture As A Means of Oral Communications."

7

WHAT'S YOUR TELEPHONE SCORE?

Do You:	Yes	Sometimes	No
1. Answer promptly			
2. Greet the customer pleasantly			
3. Identify yourself properly			
4. Explain waits			
5. Leave word where you're going			
6. Ask questions tactfully			
7. Take the message			
8. Know the number			
9. Ask if convenient to call			
10. Allow time to answer			
11. Speak in a natural tone			
12. Visualize the person			
13. Say "Thank You" and "you're welcome"			
14. Listen attentively			
15. Use the customer's name and your name			
16. Speak directly into transmitter			
17. Apologize for mistakes			
18. End the call properly			
19. Replace the receiver gently			
20. End conversation if you made call

UNIT XII

Industrial Safety And The Student Learner

UNIT XII: Industrial Safety and The Student Learner

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, you should become more alert to the potential hazards involved in industry. This will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To teach students about potential work hazards.
2. To become acquainted with rules and safety standards as described in the OSHA regulations.
3. To acquaint the learner with the importance of good maintenance.

INTRODUCTION:

While it is true that no one plans to have an accident, it is also true that accidents can be avoided through knowledge, correct thinking, and good workmanship. It is the purpose of this unit to point out some unsafe conditions and practices and give you rules and safety standards to follow. Careful study of accidents has revealed that the employer and the employee must work together in accident prevention. It is the responsibility of both you and your employer to help make working conditions safe.

ACTIVITY I

You must complete (A), and then you may choose any three of the following activities.

A. Read pages 32 - 51 in the General Related Curriculum Guide, Volume 2, or pages 420 - 424 in the World of Work, 1st Edition, or pages 112 - 126 in the World of Work, 2nd Edition.

B. Write a short report on how "good housekeeping" is a definite safety factor.

C. There are several things to keep in mind to maintain proper maintenance. List six ways that you can help to maintain proper maintenance.

D. Suppose you are asked to carry a heavy box to the stock room. What is the proper procedure to follow when lifting a heavy object?

E. Why is proper ventilation important in a shop? Discuss the health factors involved.

F. Young men have more accidents than young women. Do you agree? Why?

ACTIVITY II

Choose any two of the following activities.

A. Discuss with your employer the safety record of his company. Write a short report on your findings.

B. Go to the library and select a book, reference book, or an encyclopedia, and write a report on any topic related to safety in industry.

C. If someone has an accident on the job, who should be responsible for the accident victims?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite a safety instructor into your classroom to speak on safety procedures that he tries to enforce.

SUGGESTED RESOURCE PERSONNEL

Executive Director

Personnel Manager

Safety Director

Safety Engineer

Safety Officer

Safety Professional

OSHA Representative

EVALUATION

After you have completed this unit, ask your instructor for the Unit XII quiz, "Industrial Safety and The Student Learner."

UNIT XII

INDUSTRIAL SAFETY AND THE STUDENT-LEARNER

True False

_____ 1. Accidents are an "Act of God."

_____ 2. Accidents most often occur in large firms.

_____ 3. Management must accept responsibilities for safety and lead and direct the preventive effort.

_____ 4. Good housekeeping is a major factor in the efficient production of goods of high quality.

_____ 5. When lifting a heavy object, bend your back and do not use your leg muscles.

_____ 6. Workers have more deaths and injuries off the job than they have on the job.

_____ 7. Accidents climb during the vacation season.

Fill in the blank

8. The _____ and the _____ must work together in accident prevention.

9. An _____ is any unexpected or unforseen occurrence that interrupts or inteferes with the orderly progress of the activity in question.

10. Most accidents are caused by _____ on the part of the worker.

11. In all places where dust is so dense as to be injurious to the health of persons concerned, a proper _____ system is needed.

UNIT XIII

First-aid Directions In Case Of Injury

BEST COPY AVAILABLE

UNIT XIII: First-Aid Directions In Case of Injury

PREREQUISITE: None

TERMINAL OBJECTIVE:

After you have completed this unit on first-aid, you should be a more qualified worker to take care of any emergency when no medical personnel are available. Knowledge of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To become more proficient with emergency procedures.
2. To learn some effective ways to give artificial respiration.
3. To acquaint the student with some safety measures to use in transporting an injured person.

INTRODUCTION:

The purpose of this unit is to enlighten you on the subject of first-aid, and what to do in cases of emergency. When a person's life is in danger, it is nice to have someone at the scene, who has a knowledge of what to do until a physician arrives.

Throughout this unit, you will obtain information about symptoms of shock, heat exhaustion, etc. The proper way to handle these situations and to transport an injured person will be discussed, also.

ACTIVITY I

You must complete (A), and then you may choose any two of the following activities.

A. Read pages 51 - 70 in the General Related Curriculum Guide, Volume 2, or use the encyclopedias in the library.

B. Artificial respiration is a method of getting air into and out of a person's lungs; that is, until he can breathe for himself. Explain the steps that you would use when giving artificial respiration by the mouth-to-mouth method.

C. In a paragraph or so, list some of the things that you would not do to a person that had had a serious burn.

D. What are the causes and dangers of shock? Discuss the treatment in which you would use on a person in this state.

ACTIVITY II

Choose any two of the following activities.

A. Pretend that you are walking to the drug store and you see a child being struck by a automobile, and he is bleeding severely. If you are the only person at the scene of the accident, what would you do to help this child?

B. If you were hunting with a friend and he was to fall down an embankment and break a bone, would you pick him up immediately? If your answer is no, explain why? In this particular situation, you and your friend are alone and about three miles from a phone.

C. Maybe you are interested in a health career, such as, a doctor, nurse, pharmacist, etc. Go to the library and find as much information on your topic as possible. THIS FIELD OF STUDY IS WIDE-OPEN!

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite someone from your local American Red Cross tc come in and speak to your class about some of the techniques used in cases of emergency.

OUTSIDE RESOURCE PERSONNEL

Ambulance Attendant

American Red Cross Employee

Rescue Worker

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "First-Aid Directions In Case of Injury."

UNIT XIII

FIRST AID DIRECTIONS IN CASE OF INJURY

Fill In The Blank

1. _____ is a method of getting air into and out of a person's lungs until he can breathe for himself.

2. One of the most effective ways to give artificial respiration is by the _____ method.

3. Any break in a bone is called a _____ .

4. In _____ _____ _____, there is deeper destruction, and the burned area may appear either charred or white.

5. In _____ _____ _____ the skin is merely reddened as by a slight sunburn.

6. In _____ _____ _____, blisters develop.

True-False

_____ 7. You can blow air into a person's lungs either through the mouth or the nose when administering artificial respiration.

_____ 8. A tourniquet should be used only for a severe, life-threatening hemorrhage that cannot be controlled by other means.

_____ 9. Splints can be made of almost any material that is rigid enouth to give support to the fractured body part.

_____10. Do not change dressings that are initially applied to a serious burn until absolutely necessary.

_____11. First aid objectives are to treat for shock, relieve pain, and prevent infection.

_____12. It is very easy to determine the degree of a burn.

_____13. All seriously injured persons should be treated for shock, even though all of these symptoms have not appeared, and the person seems normal and alert.

_____14. A person with an extensive burn needs a lot of liquid and salt.

_____15. Symptoms of a heat stroke include a headache, dizziness, irritability, and seeing objects through a red or purplish haze.

UNIT XIV

Health And Hygiene

UNIT XIV: Health and Hygiene

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student will have a greater understanding of the importance of good health, and how to take care of their health. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To learn the importance of physical examinations.
2. To become more acquainted with immunizations as a weapon against communicable disease.
3. To obtain a workable knowledge of the five rules to good health and hygiene.

INTRODUCTION:

Every year millions of dollars are lost by wage earners, due to illness. Being free of illness and disease is certainly a factor in good health. It is important to know how the body functions.

Immunizations are very helpful in guarding against communicable diseases. During childhood, most people have been immunized against common diseases, such as, small pox, polio, etc.

After adulthood is reached, there will be very few assets greater than good health. The periodic health

examination is the best way to protect one's good health. This consists of a early check-up of the entire body.

ACTIVITY I

You must complete (A), and then you may choose any three of the following activities.

A. Read pages 70 - 78 in the General Related Curriculum Guide, Volume 2, or pages 54 - 56 in the World of Work, 1st Edition, or page 43 in the World of Work, 2nd Edition.

B. Discuss how good health is important to you. How can you contribute to maintaining good health?

C. If a person has rotten teeth, what are going to be some contributing factors?

D. There are several things you can do for good eyesight. List four of these.

E. Smoking has developed into a very bad habit for a lot of people. Name eight of the harmful substances that are combined into a cigarette.

F. Good table manners are very important. List three.

ACTIVITY II

Choose four of the following activities.

A. Health in terms of human relationships simply means the way in which your personal appearance and presence affects other people. How can you maintain a good personal appearance?

B. Suppose for a minute that you have a very close friend, and this particular friend has a terrific body odor. How could you tactfully tell him to do something about it, or he wasn't going to have many friends left?

C. How would you feel if you were to go into a restaurant and the employees were not well-groomed. Do you think you would recommend this restaurant to your friends? Why? To top it all off, you look upon the wall and notice that their sanitation rating is C.

D. All the findings concerning smoking seem to indicate that it is likely to be a harmful habit. What are the results or the harm cigarettes can do to a person's health?

E. In most of the industries today, there are safety equipment for the eyes and ears. If this particular plant in which you work happens to not participate in the safety program, what would be some suggestions that you could make to your supervisor?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite someone from your local Health Center to come out and speak with the class on the topic "Personal Cleanliness."

SUGGESTED RESOURCE PERSONNEL

Coach

UNIT XV

Budgeting

UNIT XV: Budgeting

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will be able to budget his money more efficiently. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To develop a properly constructed budget.
2. To impress upon the student the importance of saving.
3. To teach the student to manage his monetary affairs to obtain the greatest benefit.

INTRODUCTION:

Every successful business firm and individual, as well, makes a budget to guide their spending. It is the key to buying, saving, borrowing, investing, and planning for the future.

Operating without a budget is like driving blindfolded. A well-planned budget will aid you in getting the things you want from your earnings.

ACTIVITY I

You must complete (A) and then you may choose any <u>three</u> of the following activities.

A. Read the Overview on pages 82 - 86 in the <u>General Related Curriculum Guide</u>, Volume 2. Also, read pages 89 - 91 in the <u>General Related Curriculum Guide</u>, Volume 2, or pages 153 - 176 in the <u>World of Work</u>, 1st Edition, or pages 131 - 144 in the <u>World of Work</u>, 2nd Edition.

B. What is a budget, and how may a budget help you to develop efficient spending habits?

C. Explain what part the following items have in budget making:

   1. Goals
   2. Individual wants and needs
   3. Fixed expenses
   4. Variable expenses

D. What characteristics contribute to a workable budget?

E. In what ways may past expenses be useful in making a budget?

F. If you had a summer job, what would be a good goal for saving your money?

ACTIVITY II

Choose <u>four</u> of the following activities.

A. As a child, you were probably given a certain amount of money to spend per week. This money was called an allowance. How do you feel you profited from this experience?

B. Now that you are responsible young people, with a job, how can you budget your money for one month, effectively?

C. When you get married and have a family, do you plan to budget your income? Why?

D. What are the pros and cons of budgeting?

E. Suppose you are making a salary of $100 weekly. Make out a monthly budget, for yourself, using these figures.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

In the home the budget is much depended on the wife. Invite a housewife to speak to your class on some of the objectives of budgeting.

SUGGESTED RESOURCE PERSONNEL

Comparison Shopper

Housewife

Personnel Manager

Purchasing Manager

EVALUATION

Ask your instr ctor for the quiz on "Budgeting" and see how much knowledge you have obtained from this lsp.

UNIT XV

BUDGETING

True-False

_____ 1. It is best to be liberal in your estimation of income.

_____ 2. Income should include everything you are going to receive except for wages or salary.

_____ 3. Planning a budget forces us to make decisions on what we want out of life.

_____ 4. The same type of budget should be used for every individual.

_____ 5. People who do not have priorities, usually do not see a need for a budget.

_____ 6. When you are setting up a budget, past experiences and future goals should be considered.

_____ 7. Your budget should be designed by an expert.

_____ 8. A wise budget is one that works.

Fill In The Blank

9. _____ would include such items as food, water, vacation, clothing, and recreation.

10. _____ include such things as a payment on installment purchases, payment on home, church contributions, and insurance policies.

11. A _____ is a plan for the use of income.

UNIT XVI

Savings And Investment

UNIT XVI: Savings and Investment

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will be able to understand the importance of saving and to recognize the need to have investments. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To help the student become aware of the many ways of saving.
2. To help the student develop a savings plan.
3. To acquaint the student with investment and retirement plans.

INTRODUCTION:

Savings provide a sense of independence and security. This feeling of security can be a source of great satisfaction, especially if you are saving for some definite goal.

There are many reasons for saving. Some people may save for a car or boat, while others may save just for the sake of saving.

In times past, many people would hide their money in bed mattresses, in sugar bowls, and other places at home, because they did not trust banks. Today, savings and loan associations have encouraged savings by paying a certain amount of interest.

ACTIVITY I

You must complete (A), and then you may choose any three of the following activities.

A. Read pages 93 - 94 in the General Related Curriculum Guide, Volume 2, or pages 261 - 263 in the World of Work, 2nd Edition.

B. What is the importance of saving?

C. Should you save your money even when you do not have a particular goal?

D. There are many good means of saving. List four of these.

E. In our free economy, why do you think that it is important to have corporate savings?

F. Why is it important for the bank, in which you put your savings, to be a member of the Federal Deposit Insurance Corporation?

ACTIVITY II

Choose three of the following activities.

A. One very good method of saving is through a credit union where a person is employed. What are some of the advantages over other saving plans? Some outside help may be needed to find some good answers, such as encyclopedias or books on saving and investments.

B. Social security insurance is also a good means of saving. Find all the information that could back up this statement and write a short report.

C. Develop a budget according to a set income of $150 (net pay) per week.

D. Using outside resources, develop a retirement plan.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Visit one of your local savings and loan associations, and talk to a representative in the savings department. Find out all the information about opening a savings account. List all of the information that you can find, including the different types of saving plans, interest, etc. (You could visit a bank in lieu of a savings and loan association).

SUGGESTED RESOURCE PERSONNEL

Savings and Loan Personnel

Stockbroker

Social Security Representative

EVALUATION

Ask your instructor for the "Savings and Investment" quiz, and see how much knowledge you have obtained from this unit.

UNIT XVI

SAVINGS AND INVESTMENT

True-False

_____ 1. A good method for saving is through a credit union.

_____ 2. Often credit unions are able to pay higher rates of earnings than commercial banks.

_____ 3. Home ownership is not a very good means of saving.

_____ 4. There is no need for corporations to save money.

_____ 5. A good investment would be that of buying shares of stock.

Fill In The Blank

6. Individual savings are called _____.

7. In making a _____, one must plan his spending.

8. The money that is paid to a stockholder is called a _____.

UNIT XVI

SAVINGS AND INVESTMENT

True-False

1. True
2. True
3. False
4. False
5. True

Fill In The Blank

6. personal savings
7. budget
8. dividend or profit

UNIT XVII

Banking

UNIT XVII: Banking

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will have a workable knowledge of the many phases of banking. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with the many advantages of banking.
2. To help the student to become more aware of the different plans banks offer.
3. To help the student to understand the steps involved in opening a checking account.

INTRODUCTION:

Bank functions have evolved in the various areas of the world in accordance with the development of an area's economic activities. The modern commercial bank performs a wide range of services for its customers. Commercial banks have three principle functions. They are:

1. To accept money for safe guarding in the form of deposits.
2. To supply commerce and industry with circulating capital

in the form of loans.

3. To create money and bank credit as needed for the proper adjustment of the national economy.

ACTIVITY I

You must complete (A), and then you may choose any three of the following activities.

A. Read pages 96 - 98 in the General Related Curriculum Guide, Volume 2, or pages 244 - 261 in the World of Work, 1st Edition, or pages 193 - 203 in the World of Work, 2nd Edition.

B. Explain the difference between time deposits and demand deposits.

C. In what ways would a savings and loan association differ from a commercial bank?

D. When you deposit your money for safe-keeping, the bank will agree to repay your money when you ask for it. What is the purpose of a passbook?

E. Savings banks usually have two functions. List these.

ACTIVITY II

Choose <u>three</u> of the following activities.

A. Check writing is a very popular practice among many people today. It is more convenient than carrying cash and safer, too. Ask your instructor for the check writing exercise that has been prepared for this unit.

B. Find any topic related to banking and write a one-page report. (Encyclopedias and reference books can be found in the library).

C. Have you ever thought of becoming a banker? If so, find out the requirements for this position, and write a short paragraph on this topic.

D. Charge cards are most convenient in today's society, because they are so widely accepted. When you offer a clerk, for example, your charge card, it is the same as offering him quick money. Ask your instructor for the "Master Bank" application form and fill it out as though it was for real.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Ask your local banker to come to your classroom and talk with your class on the topic, "Bank Statements and Balancing A Checkbook."

SUGGESTED RESOURCE PERSONNEL

Accountant

Bank Manager

Bank Teller

Cashier

Credit Manager

EVALUATION

Ask your instructor for the quiz on "Banking", and see how much knowledge you have obtained from this unit.

OCTOBER CHECKBOOK TRANSACTIONS

The following transactions listed below have taken place during the month October. Write a check for each transaction that you have paid to someone for a certain service, (there are 25 transactions) and fill out a deposit slip if you have deposited money to your account, (there are 4 deposits).

You have a balance in your checkbook of $300.

October 1, 1975 Paid $20 to Duke Power Company for electricity expense. Check No. 1

October 1, 1975 Paid $7 to Southern Bell for telephone expense. Check No. 2

October 3, 1975 Paid $60 to the Lenoir Finance Company for car payment. Check No. 3

October 4, 1975 Deposited $100 to your checking account. Deposit No. 1

October 7, 1975 Paid $90 to Mutual Savings and Loan for house payment. Check No. 4

October 10, 1975 Paid $25 to the Fairway Super Market for groceries. Check No. 5

October 10, 1975 Bought a new coat for $50 from Belk's Department Store. Check No. 6

YOUR CHECKBOOK BALANCE AT THIS POINT SHOULD BE $148.

October 11, 1975 Deposited $150 to your checking account. Deposit No. 2

October 15, 1975 Wrote a check for $10 to Quik Way Grocery Store for cash. Check No. 7

October 17, 1975 Paid $40 to Simpson Insurance for the annual hospital insurance. Check No. 8

October 17, 1975 Paid $30 to Barger Finance Company for a motorcycle payment. Check No. 9

YOUR CHECKBOOK BALANCE AT THIS POINT SHOULD BE $218.

October 18, 1975 Paid $27 to the Lowe's Foods, Inc. for groceries. Check No. 10

October 18, 1975 Deposited $125 to your checking account. Deposit No. 3

October 21, 1975 Paid $5 to City Dry Cleaning Service for the dry cleaning expense. Check No. 11

October 23, 1975 Paid $10 to the Deal High School for band expense. Check No. 12

October 23, 1975 Paid $8 to the Service Distributor for gas expense. Check No. 13

October 24, 1975 Paid $25 to Barringer Oil Company for Heating Oil. Check No. 14

October 24, 1975 Paid $4 to Howard Long for water expense. Check No. 15

YOUR CHECKBOOK BALANCE AT THIS POINT SHOULD BE $264.

October 25, 1975 Deposited $200 to your checking account. Deposit No. 4

October 28, 1975 Paid $15 to Dr. Link for dental expense. Check No. 16

October 28, 1975 Paid $10 to Dr. King for animal expense. Check No. 17

October 29, 1975 Paid $6 to the Norway Esso for gas expense. Check No. 18

October 29, 1975 Paid $12 to Dr. Frye for doctor fees. Check No. 19

October 30, 1975 Paid $6 to Price Dry Cleaning for the dry cleaning expense. Check No. 20

October 30, 1975 Paid $22 to William's Market for groceries. Check No. 21

October 30, 1975 Paid $14 to Holly Drug Store for prescription expense. Check No. 22

October 31, 1975 Paid $6 to Lail High School for typing fees. Check No. 23

October 31, 1975 Paid $11 to Cannon Paint Company for painting supplies. Check No. 24

October 31, 1975 Paid $7 to T.V. Guide for a year's subscription. Check No. 25

YOUR CHECKBOOK BALANCE AT THIS POINT SHOULD BE $355.

UNIT XVII

BANKING

True-False

_____ 1. There is only one type of bank, and it is called a commercial bank.

_____ 2. Only certain individuals can deposit money for safe-keeping.

_____ 3. The passbook for savings acts as a receipt for the depositor.

_____ 4. Money that is deposited in a savings account pays money to the depositor.

_____ 5. The use of a checking account is very inconvenient.

_____ 6. A savings account is called a time deposit.

_____ 7. The best function of a bank is financing business enterprises.

_____ 8. The Federal Deposit Insurance Corporation was formed to protect savings in banks up to $40,000.

7. True
8. True

UNIT XVIII

Credit

UNIT XVIII: Credit

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, you will have a greater awareness of the many different types of credit that are available for your use. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To teach the student the importance of having a good credit standing.
2. To acquaint the student with the many different types of credit.
3. To acquaint the student with the advantages and disadvantages of credit.

INTRODUCTION:

Consumer credit has not always been an important factor in our economy. Before its development, our economy was essentially rural. As there was a need for a certain item, people would exchange surplus products with their neighbors. This was called the barter system.

The Industrial Revolution brought about many changes. Many people began moving from the farm to the city. As peoples needs increased, it became necessary to have some means of securing the necessities. Therefore, consumer credit was brought about.

ACTIVITY I

You must complete (A), and then you may choose any four of the following activities:

A. Read pages 100 - 110 in the General Related Curriculum Guide, Volume 2, or pages 204 - 227 in the World of Work, 1st Edition, or pages 166 - 182 in the World of Work, 2nd Edition.

B. Explain in your own words why consumer credit is important to us.

C. Credit is an economic transaction. Therefore, we need two or more persons in order to make this transaction. Explain the difference between a debtor and a creditor.

D. Consumer credit is based on trust. Each applicant for credit is judged on three qualifications. List these and explain what each one means.

E. In addition to the method of making payments, there are four important differences between installment and opencharge account credit. List these.

F. There are many advantages and disadvantages of personal credit. Name a few of these.

ACTIVITY II

Choose any four of the following activities.

A. This chapter has been very enlightening about the facts of credit. Just about everybody will reach out for credit at some stage of their life. Credit can be a good thing if it is not over-used. How would you interpret this last sentence?

B. It has been proven that interest rates charged by a small loan or consumer finance agency are usually higher than those charged by banks. If this is the case, do you think you will ever go to a consumer finance agency for a loan and why? Fill out the credit application blank in which your instructor will give you upon request.

C. Tell how unexpected expenditures delayed the achievement of a goal you or your family had set. Explain how credit could have helped in their particular situation.

D. Often times many people are guilty of going over their heads in expenses just so they can be "Keeping up with the Jones's." Write an interpretation of what is meant by this statement.

E. List five tiems you have just purchased. Decide if it would have been more beneficial to have obtained these items on credit. Explain.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Find the "Yellow Pages" in your local phone directory. Look up the number of a credit card office and ask if a representative would come and speak to your class about the advantages of using credit cards.

SUGGESTED RESOURCE PERSONNEL

Brokerage Manager

Credit Manager

Insurance Manager

Credit Card Representative

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Credit."

UNIT XIX

Loans

UNIT XIX: Loans

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, you will have a better understanding of the procedures involved in obtaining a loan. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To emphasize the importance of good character in relation to obtaining a loan.
2. To introduce the various lending agencies.
3. To acquaint the student with the pros and cons of building a house.

INTRODUCTION:

A person who has good character and is a contributing member of the community usually does not have any problems obtaining a loan. In order to obtain these assets, you have to prove that you are capable of repaying the loan. Holding a steady job and paying your bills on time can be valuable to you.

ACTIVITY I

You must complete (A), and then you may choose any two of the following activities.

A. Read pages 111 - 115 in the General Related Curriculum Guide, Volume 2, or pages 208 - 209 and 221 - 222 in the World of Work, 1st Edition, or pages 178 - 180 in the World of Work, 2nd Edition.

B. What is the purpose of the Federal Housing Administration?

C. What are some of the benefits that the Veterans Administration administers?

D. What are some pros and cons for buying a house? Renting a house?

ACTIVITY II

Choose one of the following activities.

A. Owning your own home is practically everyone's choice. But, before you make that giant step, there are several things you have to consider. List some of these.

B. Write a report dealing with the Federal Housing Administration. Find out how you can become eligible for this type of loan. (You may be able to find this information in the library).

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite someone from your local Savings and Loan to come to your class and talk with you about the steps involved in obtaining a loan.

SUGGESTED RESOURCE PERSONNEL

Interest Clerk

Loan Department Manager

Mortgage Clerk

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Loans."

UNIT XIX

LOANS

True - False

_____ 1. A Federal Housing Administration loan is insured by the Federal Government.

_____ 2. Veterans Administration loans are available for everybody.

_____ 3. A Federal Housing Administration loan can usually be purchased with a smaller down payment than a loan secured through other means.

_____ 4. Buying a home is one of the largest financial investments in one's life.

_____ 5. An oral contract gives better assurance against fraud than a written contract.

_____ 6. The length of time for which a lease is written is unimportant.

_____ 7. Renting a home is more sensible for most people.

UNIT XX

Buying Goods And Services

BEST COPY AVAILABLE

UNIT XX: Buying Goods and Services

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student will have become more aware of America's complex system of large scale production, manufacturing, and marketing. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To teach the student about information and consumer protection.
2. To emphasize the importance of the activities performed by the non-government, state, and federal agencies as far as buying goods and services.
3. To provide information and counseling on goods and services.

INTRODUCTION:

If the consumer is to spend his money wisely for goods and services, he must be aware of some important specifications. The consumer can obtain this type of knowledge from non-government and state and federal agencies.

In most cases it would be difficult for an individual to gain special services. The expense and the time required in investigating and testing a product for an individual would be out of the question. These agencies provide their services to all consumers.

ACTIVITY I

You must select (A), and then any two of the following activities.

A. Read pages 116 - 124 in the General Related Curriculum Guide, Volume 2, or pages 173 - 202 in the World of Work, 1st Edition, or pages 145 - 164 in the World of Work, 2nd Edition.

B. Why is research and testing important to you as a consumer?

C. List some of the Federal Agencies mentioned in the textbook and give their their purpose.

D. Why is the Federal Trade Commission so important?

E. Explain the meaning of "long range planning" in buying goods and services.

ACTIVITY II

Choose any two of the following activities

A. Advertising plays an important part in the movement of a new product to the market. Be creative and present a new product to the market, by way of advertising. (Use one full page)

B. Write a one-page report on the law of supply and demand, and relate in your report some of the products that are on the market today.

C. Everybody today has an abundance of clothing. Think of your wardrobe and make an inventory of the clothing you own. Write beside of each item the approximate cost. At your present salary, how long do you think it would take to replace your wardrobe?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Look at the list of occupations below and decide upon a speaker to come in and talk with your class on the advantages of an advertising career.

SUGGESTED RESOURCE PERSONNEL

Artist

Classified Ad Clerk

Display Man

Marketing Researcher

Photographer

Public Relations

Salesman

Sales Promotion Manager

EVALUATION

Ask your instructor for the quiz on "Buying Goods and Services," and see how much knowledge you have obtained from this unit.

UNIT XXI

Legal Relations In Buying And Selling

UNIT XXI: Legal Implications of Buying and Selling

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will have a greater understanding of the obligations and responsibilities with the ownership of goods. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To help the student to become knowledgeable with the legal aspects of buying and selling goods.
2. To develop with the student the importance of legal knowledge.
3. To acquaint the student with a variety of situations where they should obtain legal advice.

INTRODUCTION:

The purpose of this unit is to familiarize the student with legal implications of buying and selling. It is most difficult for the average person to be familiar with his rights and obligations provided by law.

There are many situations where an individual should obtain legal advice. When the selection of a lawyer becomes necessary, it would be wise to select one who is a member of the local and state bar association.

ACTIVITY I

You must complete (A), and then you may choose any <u>three</u> of the following activities.

A. Read pages 125 - 129 in the General Related Curriculum Guide, Volume II, or pages 229 - 242 in the <u>World of Work</u>, 1st Edition, or pages 184 - 192 in the <u>World of Work</u>, 2nd Edition.

B. What are contracts? What are the essentials of a valid contract?

C. Explain the difference between expressed and implied warranties.

D. Must a public carrier guarantee the safety of its passengers? Explain.

E. When should a lawyer be contracted to examine a contract?

ACTIVITY II

Choose any two of the following activities.

A. Probably at some time in your life you will need the advice of a lawyer. List at least six situations where this would be true.

B. When you are traveling, there will be times when you will have to make arrangements to stay overnight in a motel. Legally, when does a person become the guest of a motel?

C. As a consumer, there will be many situations where you will receive unordered goods. What are your legal responsibilities when receiving these goods?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Arrange for a field trip to be taken to your local courthouse to view actual hearings in the courtroom.

SUGGESTED RESOURCE PERSONNEL

FBI Agent

Lawyer

Legal Secretary

Police Office

Title Examiner

EVALUATION

Ask your instructor for the quiz on "Legal Relations In Buying and Selling", and see how much knowledge you have obtained from this unit.

UNIT XXI: LEGAL RELATIONS IN BUYING AND SELLING

True - False

_____ 1. You should have a lawyer write your will.

_____ 2. Being a member of a bar association insures the ability of a lawyer.

_____ 3. Rights and responsibilities of goods, follow the title.

_____ 4. Contracts for essentials by minors are legal.

_____ 5. A person is considered a guest at a hotel when he signs the register.

_____ 6. Only the owner has the legal right to transfer a title.

_____ 7. If a person receives unordered goods, he is under an obligation to keep or pay for them.

Fill in the blank

8. Most transactions in buying and selling goods result in an arrangement called a _____.

9. _____ is another name for ownership.

10. List the two types of warranties.
    A.
    B.

UNIT XXI

UNIT XXII

Insurance

UNIT XXII: Insurance

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student will have a greater awareness of the many different types of insurance that are available today. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To become acquainted with the advantages of insurance.
2. To understand the importance of insurance as an investment.
3. To develop an awareness of the four basic kinds of insurance policies.

INTRODUCTION:

In the United States, there are many insurance companies serving every possible insurance need. Insurance gives an individual security in his everyday life.

There are four basic kinds of insurance policies. Each policy is constructed to fit a given situation. Insurance is purchased to protect a person from loss of life or anything of value.

Since you have entered the field of work, now is the time to give the subject of insurance a serious thought. Insurance will be a lifetime investment and you need to choose it with care.

ACTIVITY I

Everyone must choose (A), and then any three of the following activities.

A. Read pages 132 - 145 in the General Related Curriculum Guide, Volume II, or pages 313 - 334 in the World of Work, 1st Edition, or pages 249 - 262 in the World of Work, 2nd Edition.

B. Why is it so important to have adequate insurance?

C. There are many kinds and forms of insurance. Name and describe at least four forms of insurance.

D. Straight life insurance differs from term insurance in four ways. List these.

E. The cost of fire insurance differs in various areas. List four reasons that determines the cost of fire insurance.

F. Why is there a greater need for insurance in today's society?

ACTIVITY II

Choose any two of the following activities.

A. As students approach the age of sixteen, the first thing to do is to get their license, and then buy a car. What kind of insurance would you need to purchase if you bought a car? Why?

B. When you go to buy your first car, you will find that insurance for a young person is considerably higher. List the four main factors which determine the cost of insurance.

C. Imagine for a few mintues that you have just had an automobile accident while driving your friend's car. How do you think you would explain the accident to the owner of the car? (You were not injured in the wreck.)

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite someone from a local insurance company to come in and talk with your class on the different types of insurance available today.

SUGGESTED RESOURCE PERSONNEL

Actuary

Insurance Adjuster

Insurance Clerk

Life Insurance Agent

Office Clerk

Property Insurance Agent

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Insurance", and see how much knowledge you have obtained.

UNIT XXII: INSURANCE

True - False

_____ 1. A person who buys insurance is called a policy holder.

_____ 2. The consideration paid for a contract of insurance is called a premium.

_____ 3. Insurance policies are illegal documents between the insured and the insuree.

_____ 4. When you are buying insurance, you should be aware of the fine print.

_____ 5. Term insurance is purchased for a definite period of time.

_____ 6. Straight life insurance is the most expensive form of insurance available.

_____ 7. The basic types of home insurance coverage are fire, personal, liability and theft.

_____ 8. Collision insurance provides protection for your own car against damage.

_____ 9. Premiums for car insurance are usually higher if a male driver is over 25 years of age.

_____ 10. The cost of workmen's compensation insurance is paid entirely by the employer.

UNIT XXII

INSURANCE

True-False

1. True
2. True
3. False
4. True
5. True
6. False
7. True
8. True
9. False
10. True

UNIT XXIII
Government Services

UNIT XXIII: Government Services

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student should become more aware of the basic function which taxation plays in our government. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To help the student understand the general tax structure.
2. To acquaint the student with the different types of taxes and the services he receives from them.
3. To help the student understand his individual part in the program.

INTRODUCTION:

Taxes are the means by which society insures that its public financial responsibilities will be met. A tax is that portion of private wealth or income demanded by the government for the payment of its expenses.

Regardless of the level at which taxes are paid, they will give a service to most people. They provide for public expenses such as the salaries of officers, the construction of public improvements, the support of the police, and of the armed forces.

ACTIVITY I

Everyone must choose (A), and then any four of the following activities.

A. Read pages 147 - 157 in the General Related Curriculum Guide, Volume 2, or pages 265 - 287 in the World of Work, 1st Edition, or pages 209 - 225 in the World of Work, 2nd Edition.

B. There are several different types of taxes. What is the difference in a progressive tax and a proportional tax?

C. Explain the difference between a direct and indirect tax. Name two of each.

D. Most of you will be paid for your services by a check. Name two of the deductions that will be taken out of your paycheck.

E. Name three city employees that receive their pay from taxes.

F. What is an intangible tax?

ACTIVITY II

Select two of the following activities.

A. Draw three large circular graphs illustrating the sources from which the government receives money and the ways in which the government spends money. The first graph illustrating the federal government, the second illustrating the state government, and the third illustrating the county government.

B. Taxes are the means by which society insures that its public financial responsibilities will be met. After you do some research on taxes, write a short summary on "Why you do or do not feel justified paying taxes."

C. Taxation dates back as far as the early civilization. Using resource books and encyclopedias, write a report on the "History of Taxation."

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite your local tax collector to speak to your class on "Where My Tax Dollar Goes."

SUGGESTED RESOURCE PERSONNEL

Accountant

Bookkeeper

Internal Revenue Agent

Tax Collector

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Government Services," and see how much knowledge you have obtained.

UNIT XXIII

GOVERNMENT SERVICES

Fill In The Blank

1. _____ is the process by which the people pay the expenses of carrying on government.

2. Taxes will give a _____ to most people.

3. The tax on gasoline is sometimes classified as a _____ tax.

4. _____ taxes are those charged to public utilities.

5. In this country, we have three basic methods of taxation: _____, _____ and _____.

True-False

_____ 6. A direct tax is levied on the person or property upon which it is planned to rest.

_____ 7. An indirect tax is levied in such a way that its burden can be shifted or divided.

_____ 8. The smallest source of revenue to the general fund of our state is through income tax.

_____ 9. The larger the income the more tax one has to pay.

_____10. Social security insures us of employment.

UNIT XXIII

GOVERNMENT SERVICES

Fill In The Blank

1. Taxation
2. service
3. benefit
4. Franchise
5. proportional, progressive, and regressive

True-False

6. True
7. True
8. False
9. True
10. False

UNIT XXIV

Fractions

UNIT XXIV: Fractions

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student should be able to add, subtract, multiply and divide decimals. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To learn the difference between the denominator and the numerator.
2. To learn how to add, subtract, multiply, and divide fractions.
3. To learn how to work with mixed fractions.

INTRODUCTION:

Fractions are numerical representations of two numbers whose quotient is to be determined. They are encountered so frequently in all phases of everyday life. It is very important to review them occasionally. The person who can use them quickly and accurately has the advantage in any transaction.

ACTIVITY I

Everyone must complete all of the following activities.

A. Read pages 162 - 168 in the General Related Curriculum Guide, Volume 2, or read the self-contained study sheets that are attached to this unit.

B. What is the meaning of a numerator and a denominator?

C. When you are dividing a fraction, what is the first thing you do?

ACTIVITY II

Everyone must complete all of the following activities.

A. Add the following fractions: (Remember, to add fractions, they must have identical denominators.)

(1) 3/4 + 1/4 =

(2) 10/12 + 8/12 =

(4) 1 1/2 + 2 1/2 =

(5) 1/6 + 3/18 =

B. Subtract the following fractions: (Remember, to subtract fractions, they must have identical denominators.)

(1) 6/10 - 3/10 =

(2) 2 5/9 - 1 4/9 =

(3) 8/16 - 4/16 =

(4) 2 6/12 - 1 3/4 =

(5) 1/6 - 1/3 =

C. Multiply the following fractions: (Remember, when multiplying fractions, multiply the numerator for a new numerator and multiply the denominator for a new denominator and simplify the answer if necessary.

(1) 2/3 X 2/3 =

(2) 6/8 X 7/16 =

(3) 3/4 X 8/12 =

(4) 2 2/6 X 3 3/6 =

(5) 12/16 X 16/32 =

D. Divide the following fractions: (Remember, when dividing fractions, invert the denominator and multiply.)

(1) 3/5 ÷ 3/5 =

(2) 5/15 ÷ 3/15 =

(3) 3/18 ÷ 12/32

(4) 6 2/3 ÷ 4 6/9 =

(5) 12 1/4 ÷ 3 6/10 =

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite a teacher from your Math Department to come in and speak to your class on the many areas that involve math.

SUGGESTED RESOURCE PERSONNEL

Applied Mathematician

Math Teacher

Operations Analysts

Statistician

Theoretical Mathematician

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Fractions" and see how much knowledge you have obtained.

MATH

Fractions, decimals, percentages, and measurements are encountered so frequently in all phases of everyday life that it is important to review them occasionally. The person who can use them quickly and accurately has the advantage in any transaction.

Fractions

The meaning of a fraction like 5/6 is that it tells the number of certain equal parts of a whole, a unit, or one. The numeral below the fraction bar (the denominator) tells the number of equal parts in the whole unit while the numeral above the fraction bar (the numerator) tells the number of these parts that are represented. This fraction is read five-sixths.

1. Read the following: (a) 2/3 (b) 1/4 (c) 3/8 (d) 6/19

2. What is the meaning of each fraction in number 1?

3. A stick is five inches long. Express this as a fraction of a foot.

4. A plane takes 57 minutes between two airports. Express this in a fraction of an hour.

5. Two candy bars are distributed in equal shares to three boys --

   (a) What part of the total candy did each boy get?

   (b) The parts that each boy got make up what fractional part of <u>one</u> bar?

   (c) Is one third of two the same as two thirds of one?

6. The inches on a ruler are divided into eighths.

(a) What part of an inch are five of the small divisions?

(b) What part of an inch are eight of the divisions?

<u>Rule</u>: The numerator and the denominator of a fraction can be divided or multiplied by the same number (except zeros) without changing the value of the fraction.

Examples: $\frac{3 \times 2}{4 \times 2} = \frac{6}{8}$ $\frac{3 \times 3}{4 \times 3} = \frac{9}{12}$ $\frac{3 \times 5}{4 \times 5} = \frac{15}{20}$ $\frac{15 \div 3}{18 \div 3} = \frac{5}{6}$

$\frac{12 \div 6}{18 \div 6} = \frac{2}{3}$

<u>Rule</u>: When the numerator and denominator cannot be further divided by the same number, the fraction is in its lowest terms. Thus, the lowest terms of $\frac{12}{16}$ is $\frac{3}{4}$

Problems: Reduce to the lowest terms.

(1) $\frac{8}{10}$ (2) $\frac{10}{12}$ (3) $\frac{18}{30}$ (4) $\frac{10}{15}$

(5) $\frac{18}{48}$ (6) $\frac{625}{800}$

Write the missing term for each of the following:

(1) $\frac{5}{6} = \frac{\quad}{18}$ (6) $\frac{75}{425} = \frac{3}{\quad}$

(2) $\frac{2}{5} = \frac{\quad}{25}$ (7) $\frac{25}{625} = \frac{1}{\quad}$

(3) $\frac{3}{4} = \frac{18}{\quad}$ (8) $\frac{528}{640} = \frac{33}{\quad}$

(4) $\frac{9}{13} = \frac{\quad}{52}$ (9) $\frac{104}{156} = \frac{8}{\quad}$

(5) $\frac{3}{4} = \frac{108}{\quad}$ (10) $\frac{60}{625} = \frac{\quad}{15}$

<u>Rule</u>: In order to add fractions, they must have identical denominators. When they do, add the numerators and retain the denominator.

Examples: $\frac{1}{4} + \frac{3}{4} = \frac{4}{4}$ $\quad \frac{23}{43} + \frac{1}{43} = \frac{24}{43}$ $\quad \frac{3}{5} + \frac{1}{5} = \frac{4}{5}$

Problems: (1) $\frac{1}{8} + \frac{3}{8} =$ $\quad$ (2) $\frac{17}{90} + \frac{1}{90} =$

<u>Rule</u>: When adding mixed numbers, add the whole numbers and then add the fractions.

Examples: $2\ 1/4 + 3/4 = \begin{array}{r} 2\ 1/4 \\ 3/4 \\ \hline 2\ 4/4 \end{array} = 3$ $\quad 6\ 2/5 + 3/5 = \begin{array}{r} 6\ 2/5 \\ 3/5 \\ \hline 6\ 5/5 \end{array} = 7$

$5\ 1/8 + 3/8 = \begin{array}{r} 5\ 1/8 \\ 3/8 \\ \hline 5\ 4/8 \end{array} = 5\ 1/2$ $\quad 6\ 14/23 + 8\ 2/23 = \begin{array}{r} 6\ 14/23 \\ 8\ \ 2/23 \\ \hline 14\ 16/23 \end{array}$

Problems: (1) $7\ 1/16 + 3\ 3/16 =$

(2) $12\ 1/32 + 18\ 15/32 =$

(3) $289\ 1/4 + 43\ 3/4 =$

(4) $54\ 13/24 + 37\ 5/24 =$

<u>Rule</u>: When adding fractions with unlike denominators find the lowest common denominator, change all fractions so that they have this denominator and add. To do this we must remember another very useful and basic rule about fractions; i.e. if both the numerator and the denominator are multiplied or divided by the same number, it will not change the value of the fraction.

Example: $5/8 = \frac{5 \times 2}{8 \times 2} = \frac{10 \div 2}{16 \div 2} = 5/8$

$13/16 = \frac{13 \times 3}{16 \times 3} = \frac{39 \div 3}{48 \div 3} = 13/16$

$5/20 = \frac{5 \div 5}{20 \div 5} = \frac{1}{4} = \frac{1 \times 4}{4 \times 4}$

What we are doing, of course, is multiplying or dividing all these fractions with 1 since 2/2 = 1, 3/3 = 1, 5/5 = 1 etc. We are simply changing the form of 1 to suit our own immediate purpose.

Examples: $\frac{3}{4} = \frac{3 \times 2}{4 \times 2} = \frac{6}{8}$ $\qquad \frac{9}{16} = \frac{9}{16}$

$\frac{5}{8} = \frac{5}{8}$ $\qquad \frac{3}{4} = \frac{3 \times 4}{4 \times 4} = \frac{12}{16}$

$\frac{11}{8} = 1\ 3/8$ $\qquad \frac{21}{16} = 1\ 5/16$

Problems: (1) 1/2, 7/10 (2) 1/6, 1/3 (3) 1/2, 7/12 (4) 3/4, 13/16

(5) 1/2, 15/16 (6) 1/8, 3/4

Subtracting Fractions

Use the same rules for subtracting fractions that you do in adding them except, of course, that you subtract the numerators instead of adding them.

Examples:

9/10	12/15	12/15	5/8 = 5/8
8/10	7/15	2/15	1/2 = $\frac{1 \times 4}{2 \times 4}$ 4/8
1/10	5/15	10/15 = 2/3	1/8

15/32 $\qquad$ 15/32 $\qquad$ 16/32 = $\frac{16 \div 8}{32 \div 8}$ = 2/4

1/8 = $\frac{1 \times 4}{8 \times 4}$ = 4/32 $\qquad$ 1/4 $\qquad$ = 1/4

11/32

Multiplying Fractions

Rule: When multiplying fractions, multiply the numerators for a new numerator and multiply the denominators for a new denominator and simplify the answer if necessary.

Examples: 1/3 x 1/3 = 1/9 2/5 x 3/8 = 6/40 = 3/20

1/4 x 1/5 = 1/20 2/3 x 3/4 = 6/12 = 1/2

Problems: (1) 3/5 x 10/10 = (2) 3/8 x 4/19 =

(3) 6/11 x 3/10 = (4) 4/7 x 8/9 =

(5) 2/3 x 5/7 = (6) 11/12 x 7/8 =

To make things easier, cancel, (or divide one of the numerators and one of the denominators by the same number) whenever possible.

Examples: Ordinary way --- 3/4 x 1/7 = 3/24 = 1/8

9/10 x 4/27 = 36/270 = 4/30 = 2/15

Short way ---^{1}3/4 x 1/$_{2}$ = 1/8

$$\frac{{}^{1}\cancel{9}}{{}_{5}\cancel{10}} \times \frac{\cancel{4}^{2}}{\cancel{27}_{3}} = \frac{2}{15}$$

Problems: (1) 2/5 x 5/8 (2) 1/4 x 2/5 (3) 1/3 x 3/7

(4) 2/7 x 7/9 (5) 3/8 x 4/9 (6) 2/3 x 6/7

(7) 5/12 x 3/10 (8) 4/7 x 7/9

(9) 225/45 x 75/375 (10) 2/3 x 42/10 x 25/28 x 2/5

<u>Dividing Fractions</u>

When dividing a fraction by a fraction, invert (turn upside down) the denominator and multiply.

Examples: $\frac{3/4}{1/2}$ = 3/4 x 2/1 = 3/2 = 1 1/2

$\frac{3/4}{1/2}$ can also be written as 3/4 ÷ 1/2

3/4 ÷ 1/2 = 3/4 x 2/1 = 6/4 = 3/2 = 1 1/2

4/5 ÷ 4/5 = $\frac{{}^{1}\cancel{4}}{{}_{1}\cancel{5}} \times \frac{\cancel{4}^{1}}{\cancel{4}_{1}}$ = 1 OR $\frac{4/5}{4/5}$ = $\frac{{}^{1}\cancel{4}}{{}_{1}\cancel{5}} \times \frac{\cancel{4}^{1}}{\cancel{4}_{1}}$ = 1

Problems: (1) $5/8 \div 25/32$ (2) $\frac{9/8}{1/96}$ (3) $\frac{6/7}{2/49}$

(4) $\frac{3/4 \times 8/27}{2/9}$ (5) $\frac{32/61}{2/1}$ (6) $\frac{42/53}{7}$

(7) $7/8 \div 49$ (8) $\frac{7/9 \times 18/49 \times 21/10}{5/6 \times 18/15 \times 9/15}$

Multiplying Mixed Numbers

Rule: To multiply mixed numbers (4 1/2, 13 5/8 etc.) Change the mixed numbers into an improper fraction (9/2, 109/8 etc.) and multiply.

Examples: $4\ 2/3 \times 9 = \frac{14}{1\cancel{3}} \times \frac{\cancel{9}^{3}}{1} = 14 \times 3 = 42$

$8 \times 2\ 3/4 = {}^{2}\cancel{8} \times \frac{11}{\cancel{4}_{1}} = 2 \times 11 = 22$

$2\ 3/4 \times 6\ 2/3 = \frac{11}{4} \times \frac{22}{3} = \frac{121}{6} = 20\ 1/6$

Problems: (1) $7\ 1/5 \times 5$ (2) $1\ 1/4 \times 3$ (3) $12\ 1/2 \times 4$

(4) $9 \times 7\ 1/5$ (5) $2\ 2/3 \times 5\ 1/4$

(6) $8 \times 3\ 4/5$ (7) $7\ 1/3 \times 1\ 1/2$

(8) $6\ 6/25 \times 5/12$

Dividing Mixed Numbers

To divide mixed numbers change the mixed numbers into improper fractions and divide.

Examples: $5 \div 1/5 = 5\ 5/1 = 25/1 - 25$

$17 \div 2/3 = 17 \times 3/2 = 51/2 = 25\ 1/2$

$25 \div 5/7 = 25 \times 7/5 = 5 \times 7 = 35$

Problems: (1) 9 5/8 ÷ 2 3/4 (2) $\frac{2\ 3/4}{4\ 7/12}$

(3) 1/5 ÷ 5 (4) 1/6 ÷ 1/6

(5) $\frac{1/100}{1/10}$ (6) $\frac{1/10}{1/100}$

(7) 1/4 ÷ 4 (8) 7 5/8 ÷ 8 1/8

UNIT XXV

Areas And Volumes

UNIT XXV: Areas and Volumes

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, you will have had a thorough review of areas and volumes. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with areas and volumes.
2. To familiarize the student with the various formulas used in finding area and volume.

INTRODUCTION:

Area is the number of square units on a surface. The formula you have learned for the area of a rectangle is length times width.

Linear units are used to measure the length of an object, and to measure the area of a surface. Sometimes it is necessary to measure how much space an object contains. This space is called a volume and volume is measured in cubic units.

ACTIVITY I

Everyone must choose (A), and then any two of the follow-activities.

A. Read pages 168 - 182 in the General Related Curriculum Guide, Volume 2, or read the self-contained study sheets that are attached to this unit.

B. What is the meaning of area and volume?

C. List the formulas used for area and volume.

D. Explain how to find the area of a triangle and give an example.

ACTIVITY II

Choose any <u>two</u> of the following activities.

A. Find the area of the following rectangle and triangle.

Area of a rectangle:

$A = L \times W$

$A = \frac{bh}{2}$

*Note: Look at the example on page 169 or page two on the attached study sheets.

B. Look around in your classroom. Use a yard stick and measure the length and the width of the classroom and find the area; then the volume.

C. Using a cardboard box, design your dreamhouse with the dimensions being: Length - 12"; Width - 14"; Height - 10".

*Note: Constr[illegible] dividers for each room.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Use the "yellow pages" in your local phone directory. Look up the number of an architect and ask him to come and speak to your class about the importance of math to his profession.

SUGGESTED RESOURCE PERSONNEL

Architect

Engineer

Physicists

Systems Analyst

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Area and Volume", and see how much knowledge you have obtained.

Areas and Volumes

It is difficult to think of a skill that has a more practical and widespread use than that of claculating areas and volumes. Whether it is in your work, figuring the number of board feet of lumber, the amount of sheet metal required for a job, the shipping space in a box car, or in the home, figuring quantity and cost of rugs, drapes, paint, fuel consumption, etc. Many of the students who are reading this material now will be married and have households of their own within three years and this may be their last opportunity to learn these money-saving and money-earning skills.

Area is the number of square units on a surface. It makes no difference what the units are--they could be miles or centimeters. The formula or rule you have learned for the area of a rectangle is L X W, or length times width. It would work the same if you called the sides of the rectangle side one and side two or short side and song side or X and Y--just so long as you remember that you are multiplying the number of square units in a row on one side on the rectangle times the number of rows as counted on the other, adjacent side of the rectangle.

Four rows of five square units each, counted on this side.

Five square units in a row on this side.

Obviously, four fives, or 4 x 5 equal twenty, the number of square units on the surface of this figure.

Rule: Area of a rectangle: A = L X W

Rule: Area of a triangle: A = $\frac{bh}{2}$

This reads: Area of a triangle equals one-half of the base times the height. Not that if we multiply the base times the height we would have the same rule and same area as we have for a rectangle. If we cut this rectangle in half diagonally, we would get a right triangle with the base equal to one dimension of the rectangle and the height equal to the other dimension. So the triangle area formula is merely half of the rectangle area formula.

b x h would equal the area of the rectangle ABCD. ½b x h would equal one-half of this rectangle or the area of the triangle ABD.

This formula works for all triangles, whether they are right triangle or not. Remember, though, that the height must be measured perpendicular to the base.

Rule: Area of a circle $A_c = \pi R^2$

This is read: Area of a circle equals pi times the square of the radius. (pi is equal to approximately 3.14.) Let's take a look at this mysterious thing called pi (π). A long time ago a very clever mathematician discovered that no matter what the size of the circle, if he measured the diameter and the circumference and divided the diameter into the circumference, he always got the same answer; namely 3.1416 etc. He called this number (which he recognized as a constant ratio) pi, a letter of the Greek alphabet. His statement looks like this.

$$\frac{\text{Circumference}}{\text{Diameter}} = 3.14, \text{ or } \frac{C}{D} = \pi$$

Most important of all he saw that knowing the value of π (3.14) and one other dimension of <u>any</u> circle he could

always solve for the other dimension of that circle. Hence, from $\frac{C}{D} = \underline{\quad}$ he could get $C = \underline{\quad}D$ and $D = \frac{\underline{\quad}}{C}$.

Volume

To measure the length of an object, linear units are used and to measure the area of a surface square units are used. At times it is necessary to measure how much space an object contains. For instance, how much water does it take to fill a swimming pool or how much fuel oil will a storage tank hold? This space, or capacity, is called volume, and volume is measured in cubic units. A cubic inch is the space occupied by a cube one inch long, one inch wide, and one inch high. A cubic mile is the space occupied by a cube one mile long, one mile wide, and one mile high.

In this illustration you can see that there are 6 rows of cubes with 4 cubes in each row in the top layer. Also, it is obvious that there are 5 such layers in this rectangular solid, making 6 x 4 x 5 = 120 cubes in all. This could be a tiny block of steel measuring 6 x 4 x 5 millimeters, making each cube a cubic millimeter and the volume of the block 120 cubic millimeters. Also, it could be measuring air space in miles, making each unit a cubic mile and the volume 120 cubic miles. From this we can establish a rule or formula:

Rule: $V = L \times W \times H$ or volume of a rectangular solid equals its length times its width times its height.

Notice that the first two letters of this rule (L x W) will give us the area of the base of the figure and also the volume of the first layer of cubes since the height of this layer equals 1. So, we don't have to memorize the formulas or rules for regular solids such as rectangular solids, cylinders, and wedges. It is merely necessary to find the area of the base (or the top) and multiply it by the height.

Rule: $V = \frac{bh}{2} \times H$. Volume of a triangular solid one-half the base times the height of its triangular base (or top) times its height (H).

Rule: $V\circledcirc = R^2 \times H$. Volume of a cylinder equals the of its base times its height.

Footnote: The drawings indicate the type of figure in question. For an example, V means the volume of a triangular solid; A_o means the area of a circle; V ⊡ means the volume of a rectangular solid, A_T means total area; etc.

Area

Finding the surface area of these various solids is merely a matter of adding the areas of the several sides. Finding the surface area of the cylinder looks complicated, but is, in fact, quite simple. The trick is to mentally lay the cylinder over on its side and "unroll" it, making the sides of the cylinder into a rectangle whose length (L) is equal to the cylinder's height (H) and whose width (W) is equal to the cylinder's circumference (πD). Don't forget the areas of the top and bottom, which are circles.

Your solution of the surface area of a cylinder problem should look something like this:

$A_T = A \text{ side} + A \text{ top} + A \text{ bottom}$

Total surface area of a cylinder equals the area of the sides plus the area of the top plus the area of the bottom

$A_T = A_{\square} + A_{\bigcirc} + A_{\bigcirc}$

$A_T = L \times W + \pi R^2 + \pi R^2$

$A_T = H \times \pi D + \pi R^2 + \pi R^2 = H \times \pi D + 2\pi R^2$

If you have had algebra you could gather terms before solving; if not, solve by inserting the proper numerical values and to the indicated process.

$A_T = \pi (HD + 2R^2) \qquad D = 2R$

$A_T = 2R\pi (H + R)$

If the height of the cylinder is 12 inches and its diameter is 6 inches, then

$A_T = \cancel{2} \times \frac{6}{\cancel{2}} \times 3.14 \left(12 + \frac{\cancel{6}^{3}}{\cancel{2}_{1}}\right)$

$= 6 \times 3.14 \times 15$

$= 90 \times 3.14$

$= 282.60$ square inches

EXAMPLES:

Find the Areas of a rug 12' long and 9' wide

$A_{\square} = L \times W$

$= 12 \times 9$

$= 108$ sq. ft.

Of a circular room the diameter of which is 24 feet.

$A_{O} = \pi R^2$

$= 3.14 \times \frac{\cancel{24}^{12}}{2} \times \frac{\cancel{24}^{12}}{2}$

$= 3.14 \times 144$

$= 452.16$ sq. ft.

Of the triangular piece of land shown in the drawing.

$A_{\triangle} = \frac{bh}{2}$

$= \frac{\cancel{10}^{5} \times 3}{2}$

$= 15$ square miles

EXAMPLES:

Find the volumes of the following figures:

$V_{\otimes} = L \times W \times H$

$= 5 \times 3 \times 15$

$= 225$ cubic inches

$V = \frac{bh}{2} \times H$

$= \frac{25 \times \cancel{10}^{5}}{\cancel{2}} \times 4$

$= 500$ cubic yards

$V = A_o \times H$

$= \pi R^2 H$

$= 3.14 \times \frac{\cancel{10}^{5}}{\cancel{2}} \times \frac{\cancel{10}^{5}}{\cancel{2}} \times 22$

$= 3.14 \times 25 \times 22$

$= 3.14 \times 550$

$= 1727$ cubic feet

EXAMPLES:

Find the volume and the surface area of a storage tank that is 20 feet tall and 8 feet in diameter.

<u>Surface Area</u>

$A_T = A \text{ top} + A \text{ bottom} + A \text{ side}$

$= A_o + A_o + A_{\square} = 2A_o + A$

$= 2\pi R^2 + L \times W$

$= 2\pi R^2 + 20 \times \pi D$

$= 2 \times 3.14 \times \frac{\cancel{8}^{4}}{\cancel{2}} \times \frac{\cancel{8}^{4}}{\cancel{2}} + 20 \times 3.14 \times 8$

$= 32 \times 3.14 + 160 \times 3.14$

$= 100.48 + 502.40$

Volume

$V\theta = A\ base \times H$

$= A_o \times H$

$= \pi R^2 \times H$

$= 3.14 \times 4 \times 4 \times 20$

$= 3.14 \times 320$

$V\theta = 1004.8$ cubic ft.

As you can see, a complicated problem can be made simple by doing it step by step. Follow these general rules and you can't go wrong.

First: State your method of solution

Second: Replace your method statement with formulas

Third: Replace your formulas with appropriate numerals

Fourth: Complete the arithmetic

EXAMPLE:

Find the amount of steel in a round bar with a square hole through it as shown:

First, we'll find the volume of a solid cylinder and then take away (or subtract) the volume of the rectangular hold.

$V_{Total} = V\theta - V\square$

$V_T = \pi R^2 H - L \times W \times H$

$= 3.14 \times 3 \times 3 \times 16 - 4 \times 4 \times 16$

$= 16\ [(3.14 \times 9) - 16]$

$= 16\ (28.26 - 16)$

$= 16 \times 12.26$

$= 196.16$ cubic inches

*If you have not had algebra, solve by using arithmetic here.

EXAMPLE:

How many pounds of sheet metal are in this symetrical figure made of galvanized iron weighing 1/4 pounds per square foot?

The simplest approach would be to find the area of the big rectangle (16' x 16') and cut out (or subtract) the four identical corners and the round hole.

$A_{Total} = A\square_1 - 4A\square_2 - A_o$

$= L \times W - 4L^2 \times W^2 - \pi R^2$

$= 16 \times 16 - 4 \times 4 \times 4 - 3.14 \times \frac{8}{2} \times \frac{8}{2}$

$= 16 \times 16 - 4 \times 16 - 3.14 \times 16$

$= 256 - 64 - 50.24$

$= 256 - 114.24$

$= 141.76$ sq. ft.

OR

$= 16\ (16 - 4 - 3.14)$

$= 16 \times 8.86$

$= 141.76$ sq. ft.

Wt = 1/4 lbs./sq. ft. x ~~141.76~~ 35.44 sq. ft. = 35.44 pounds

EXAMPLE:

How much paint will it take to cover <u>all</u> surfaces of this decorative display cube with a hole in it if the paint will cover 400 sq. ft. per gallon?

A_{total} = A top + A bottom + A 4 identical sides + A cylinder

A_T = 2 A top + 4 A sides + A ⊖ sides

= 2 A ▣ + 4 A ▭ + A ⊖ sides

= 2 (A ▭ − A_o) + 4A ▭ + A ⊖ sides

$= 2(L \times W - \pi R^2) + 4 (L^2 \times W^2) + \pi D - H$

$= 2(20 \times 20 - 3.14 \times 6 \times 6) + 4(20 \times 30) + 3.14 \times 12 \times 30$

$= 2(400 - 3.14 \times 36) + 4 \times 600 + 3.14 \times 12 \times 30$

$= 2(400 - 113.04) + 2400 + 3.14 \times 12 \times 30$

$= 2 \times 286.96 + 2400 + 1130.40$

$= 573.92 + 2400 + 1130.40$

= 4104.32 sq. ft.

Paint = 4104.32 sq. ft. ÷ 400 sq. ft./gal. = 10.26

PROBLEMS:

Find the Areas of the following figures:

UNIT XXVI

Kinds Of Decimals

UNIT XXVI: Kinds of Decimals

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, the student will have a better understanding of the use of decimals. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To learn the meaning of fractions.
2. To acquaint the student with the kinds of decimals.
3. To learn the steps involved in converting a common fraction into a decimal fraction.
4. To learn to convert a decimal into a common fraction.

INTRODUCTION:

There are three different types of decimal fractions. They are simple, mixed and complex decimals.

A simple decimal is one that has a whole number at the right of the decimal point. An example of this would be .23.

A mixed decimal is one that consists of a whole number and a decimal fraction. An example of this would be 1.7.

A complex decimal is one that has a whole number and a fraction at the right of the decimal point. An example of this would be .06¼.

ACTIVITY I

Everyone must choose (A), and then any two of the following activities:

A. Read pages 184 - 185 in the General Related Curriculum Guide, Volume II, or read the self-contained study sheets that are attached to this unit.

B. Explain the difference between a simple, mixed, and complex decimal. Give an example of each.

C. How do you convert a common fraction into a decimal fraction? Give an example and explain the steps involved.

D. How do you convert a decimal into a common fraction? Give an example and explain the steps involved.

ACTIVITY II

Choose any two of the following activities.

A. Change the following fractions to their equivalent decimal form. Carry the division to four decimal places:

(1) 2/3 (4) 5/8

(2) 3/4 (5) 6/7

(3) 7/12 (6) 8/9

B. Convert the following decimals into common fractions. The resulting common fractions should be reduced to the lowest terms.

(1) .06 (4) .1250

(2) .50 (5) 2.5

(3) .221 (6) 3.68

C. Before multiplying the following numbers, review on page 185 in the General Related Curriculum Guide, Volume II, on this particular section, or page 2 on the self-contained study sheets.

(1) .55 x .01 = (3) 5.5 x .01 =

(2) 25 x .1 = (4) 62.63 x .001 =

D. When dividing numbers with decimal points, remember both the dividend and the divisor are moved to the right as many places as are required to make the divisor a whole number. Divide the following numbers.

(1) 55 ÷ .01 = (3) 442 ÷ .1 =

(2) $13.55 ÷ .001 = (4) 8.75 ÷ .01 =

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Look at the list below and decide upon a speaker to come to talk with your class on any math related topic that pertains to their profession.

SUGGESTED RESOURCE PERSONNEL

Accountant

Actuary

Programmer

Technician

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Kinds of Decimals" and see how much knowledge you have obtained.

Kinds of Decimals

Decimal fractions are of three general kinds--simple or pure, mixed, and complex decimals.

A simple decimal, or pure decimal, is one that has a whole number at the right of the decimal point. Thus, $.18, .45 and .307 are simple decimals.

A mixed decimal is one that consists of a whole number and a decimal fraction. Thus, $4.55 and 23.4 are mixed decimals.

A complex decimal is one that has a whole number and a fraction at the right of the decimal point. Thus, $.08 3/4, $1.12 1/2, .16 2/3, and 3.2 1/4 are complex decimals.

Converting a Common Fraction Into A Decimal Fraction

A common fraction indicates the division of the numerator by the denominator. Hence, the decimal equivalent of the fraction is found by carrying out the indicated division.

Example: Change 3/8 to its equivalent decimal form.

Solution: $\begin{array}{r} .375 \text{ answer} \\ 8\overline{)3.000} \end{array}$

Explanation: The numerator, 3, is divided by the denominator 8, until there is no remainder.

In many cases the division is not exact. No matter how far the quotient is extended, there will always be a remainder. In such cases it is necessary to specify the number of places in the quotient.

Example: Change 3/7 to a decimal of four places of exact value.

Solution: $\underline{.4285\ 5/7}$ answer
7)3.0000

Explanation: The division is carried to 4 decimal places. Since the exact decimal equivalent is required, the remainder, 5, is retained and is written in the common-fraction form, 5/7. The exact decimal equivalent is .4285 5/7.

Converting A Decimal Into A Common Fraction

A decimal may be converted into a common fraction by omitting the decimal point and writing the number as the numerator of a common fraction with a denominator of 10, 100, or 1000, etc., as the case may be. The resulting common fraction should be reduced to lowest terms.

To illustrate:

(a) .75 = 75/100 = 3/4
(b) .125 = 125/1000 = 1/8
(c) 1.4 = 14/10 = 7/5

Sometimes the fraction is a complex fraction, like 14 2/3/100. When it is, multiply the numerator and denominator by the denominator of the fraction in the numerator. Reduce the resulting simple fraction to lowest terms.

Thus, .14 2/3 = 14 2/3/100 = 14 2/3 x 3/100 x 3 = 44/300 = 11/75

Multiplication by .1, .01, and .001

When the multiplier is .1, .01, .001, and so on, the multiplication may be performed by moving the decimal point to the left in the multiplicand as many places as there

are decimal places in the multiplier, prefixing ciphers if necessary. Thus:

64.5 x .01 = .645	$8.50 x .1 = $.85
35 x .001 = .035	$2,450 x .001 = $2.45

Division by .1, .01, and .001

When numbers containing decimals are divided, the decimal point in both the dividend and divisor is moved to the right as many places as are required to make the divisor a whole number. When the divisor is .1, .01, or .001 and so on, the division may be performed by moving the decimal point to the right in the dividend as many places as there are decimal places in the divisor, annexing ciphers if necessary. Thus, 645 ÷ .1 = 6,450

$14.16 ÷ .1 = $141.60

.0275 ÷ .01 = 2.75

$15.25 ÷ .001 = $15,250

UNIT XXVI

KINDS OF DECIMALS

Fill In The Blank

1. A _____ decimal is one that has a whole number at the right of the decimal point.

2. A _____ decimal is one that consists of a whole number and a decimal fraction.

3. A _____ decimal is one that consists of a whole number and a fraction at the right of the decimal point.

4. _____ Change 5/8 to its equivalent decimal form.

5. _____ Change 7/9 to its equivalent form.

6. _____ Convert .125 into a common fraction reduced to its lowest terms.

7. _____ 55.5 x .001

8. _____ 6.9 x 82.79

9. _____ 13.63 ÷ .01

10. _____ 9.51 ÷ 4.77

UNIT XXVI

KINDS OF DECIMALS

Fill In The Blank

1. simple
2. Mixed
3. complex
4. .625
5. .777
6. 1/8
7. .0555
8. 571.25
9. 1363
10. 1.99

UNIT XXVII

Percentage

UNIT XXVII: Percentages

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon completion of this unit, you will have a better understanding of percentages. Evidence of this will be shown by a score of 80 percent on the post-test.

AIMS AND OBJECTIVES:

1. To become aware of the meaning of percentage.
2. To understand the terminology used when finding percentages.

INTRODUCTION:

Percentage means a part of a whole expressed in hundreths. Therefore, 100% of 60 is 60.

Every problem in percentage contains three elements, the base, rate, and percentage. For example, when we say 5% of $100 is $5, the base is $100, the rate is 5 and the percentage is $5. Anytime that two of these elements are known, the third can be easily found.

ACTIVITY I

Everyone must select (A), and then you may choose any three of the following activities.

A. Read pages 186 - 189 in the General Related Curriculum Guide, Volume 2, or read the self-contained study sheets that are attached to this unit.

B. Every problem in percentage contains three elements. Explain.

C. List some common fractions and then convert them to percentage equivalents. For example: 1/2 = 50%; 1/4 = 25%

D. Explain how you would find the percentage of a number when you are given only the Base and the Rate.

E. Explain how you would find the rate, when you are given only the Base and the Percentage.

F. Explain how you would find the base, when you are given only the Percentage and the Rate.

ACTIVITY II

Choose any <u>four</u> of the following activities.

A. Find the percentage of the following:

(1) 6% of 600 (3) 5% of 680

(2) 7% of 50 (4) 3% of 125

B. Find the following rates:

(1) What per cent of 9 is 6?

(2) What per cent of 55.7 is 15.5?

(3) What per cent of 12 is 6?

(4) What per cent of .0756 is .35?

C. Finding the base:

(1) 102 is 23% of what number?

(2) 50 is 25% of what number?

(3) 200 is 15% more than what number?

(4) 175 is 33% more than what number?

D. A motorcycle marked at $750 was sold for $700. Find the percentage of discount from the marked price.

E. Mrs. Robbins sold her VW for $3,000. This was 20% more than it cost her. What was the actual cost to Mrs. Robbins?

F. A local dealer was having an after-Christmas sale with everything marked 40% off the original price. If the reduced price of a motorcycle helmet is $30, what was the original price?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Contact a person that is in charge of a loan department in a local bank. Ask him/her to come and speak to your class on the importance of percentages in their daily job.

SUGGESTED RESOURCE PERSONNEL

Biologist

Economist

Electronic Computer Operating Personnel

Marketing Researcher

Surveyor

EVALUATION

After you have completed this unit, ask your instructor for the quiz on "Percentages," and see how much knowledge you have obtained from this unit.

PERCENTAGE

One percent of a number means one-hundredth of a number, six percent means six-hundredths, and so on.

The symbol % stands for the words percent. Thus 4 percent is written 4%, 6 percent is written 6%. The symbol % does the work of two decimal places. For example, 6% = 0.06; 25% = 0.25; 110% = 1.10; .5% = 0.005; 2¼ = 0.225 or 0.02¼; and 5.7% = 0.057.

Since percent means hundredths, the whole of any number contains 100% of itself. Thus 100% of 75 is 75.

Every problem in percentage contains three elements, the base, the rate, and the percentage. When we say 6% of $100 is $6, the base is $100, the rate percent is 6, and the percentage is $6. If any two of these three elements are known, the third may be found.

The following are examples which give the percentage equivalents of some common fractions most frequently used in practice. 1/8 = 12 1/2%; 5/8 = 62 1/2%; 1/6 = 16 2/3%

Finding the Percentage, Given the Base and the Rate

Example: Find 4% of 683.

Solution: 4% = 0.04 0.04 x 683 = 27.32

Explanation: Since percent means hundredths, 4% of a number means 0.04 of a number. Hence to obtain 4% of 683 by 0.04 and get the percentage 27.32.

To find the percentage, multiply the base by the rate percent. Find the following percentages: 1% of 5000; 1½% of 1062; 50% of 48; ½% of 50.

Finding the Rate, Given the Base and the Percentage

Example: What percent of 8 is 7?

Solution: 7 is 7/8 of 8, and 7/8 = 0.875 = 87.5%

Example: What percent of 64.8 is 16.5%?

Solution: $\frac{16.5}{64.8} = 0.2546 = 25.46\%$

To find the rate percent write a fraction with the percentage as the numerator and the base as the denominator and change this fraction to a decimal with four figures after the decimal point. Multiply the quotient by 100 to get the final answer to two decimal places.

Example: Find the following rates:

What percent of 10 is 5? What percent of 0.625 is .25?

What percent of 208 is 52? What percent of 0.025 is .005?

Finding the Base, Given the Percentage and the Rate

Example: 1022 is 28% of what number?

Solution: $\frac{1022}{.28}$

```
        36 50
28.)1022.00.
    84
     182
     168
      140
      140
```

Explanation: Dividing by 28 gives 1% of the number. To get 100%, that is, the whole number, multiply by 100. The result is obtained in one step by dividing 1022 by .28.

Example: 300 is 20% more than what number?

Solution:

```
300        2 50
1x20.)300x00.
      240
       600
       600
```

Explanation: Since 300 is 120% of the number, divide by 120 to get 1% of the number. To get 100%, or the whole number, multiply by 100. The result is obtained in one step by dividing 300 by 1.20.

Example: 210 is 30% less than what number?

Solution:

```
210      3 00
x70.)210x00.
     210
```

Explanation: Since 210 is 70% of the number, divide by 70 to get 1% of the number. To get 100%, or the whole number, multiply by 100. The result is obtained in one step by dividing 210 by 0.70.

To find the base, divide the percentage by the rate percent expressed as hundredths.

Example: In each of the following problems find the base:

8 is 50% of what number?

67 is 20% of what number?

5 is 1½% of what number?

8½ is 80% of what number?

Percentage

1. A hat was marked to sell for $8, but was sold for $6.
   (a) The decrease was what percentage of the marked price?
   (b) The decrease was what percentage of the sale price?
   ANSWER (a) .25 (b) 33 1/3
2. On his last birthday, Robert weighed 86 pounds. On his birthday this year, he weighed 94 pounds. Find the percentage of increase in his weight.
   ANSWER: 9.3
3. In a certain city, the price of milk was increased from 18 cents to 20 cents a quart. Find the percentage of increase based on the first cost.
   ANSWER: 11 1/9%
4. A bicycle marked at $32 was sold for $28. Find the percentage of discount from the marked price.
   ANSWER: 12 1/2
5. Barbara bought a dress at a sale for $12. This was 66 2/3% of the marked price. What was the marked price?
   ANSWER: $18.00
6. A retail merchant marks his goods to sell at a profit of 30% above the cost. What is the cost of an article marked to sell for $2.60?
   ANSWER: $2.00
7. Mr. Mason sold his house for $9200. This was 15% more than it cost him. What was the cost to Mr. Mason?
   ANSWER: $8,000

8. A sale sign reads, "All Goods Reduced 40%." If the reduced price of a radio is $120, what was the original pr price?

ANSWER: $200

UNIT XXVII

PERCENTAGE

Find the following percentages:

_____ 1. Find 3% of 720

_____ 2. Find 5% of 950

_____ 3. Find 8% of 1068

Find the following rates:

_____ 4. What percent of 9 is 6?

_____ 5. What percent of 15.6 is 9.6?

_____ 6. What percent of .0225 is .0115?

Find the following bases:

7____ 7. 890 is 20% of what number?

_____ 8. 200 is 25% more than what number?

_____ 9. 550 is 40% less than what number?

_____10. Mrs. Stallings sold her boat for $2,000. This was 25% more than it cost her. What was the cost to Mrs. Stallings?

UNIT XXVII

PERCENTAGE

Short Answers

1. 21.6
2. 47.5
3. 85.4
4. 66 2/3%
5. 61 7/13%
6. 51 1/9%
7. 4450

9. 916 2/3
10. $1600

UNIT XXVIII

Formulas, Ratio, And Proportions

UNIT XXVIII: Formulas, Ratio, and Proportion

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will have a greater understanding of the relevance between formulas, ratio and proportion. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with the terminology used within the unit.
2. To help the student recognize the importance of accuracy when working with figures.
3. To help the student differentiate between formulas, ratio, and proportions.

INTRODUCTION:

Formulas, ratio, and proportions all seem to tie in together when you are working with mathematics. You need to understand the meaning of these three terms. A formula is a short method of writing the solution of a problem. For example, a formula tells us which mathematical operations to use with certain quantities. Comparing the amount of one thing to the quantity of another thing can be called ratio. For example, ratio shows us how things are related. When you are dealing with proportions, the product of the first and last term is equal to the product of the two middle terms. After being exposed to the definitions, you can visibly see the correlation between these three terms.

ACTIVITY I

Everyone must select (A), and then any four of the following:

A. Read pages 190-195 in the General Related Curriculum Guide, Volume 2, or read the self-contained study sheets that are attached to this unit.

B. Explain the meaning of formulas and give an example.

C. Make up a hypothetical situation and write a formula to use to find the conclusion. (If you need some ideas, look at the examples on page 190)

D. What is a ratio?

E. Explain the reasoning behind this statement on ratios: "Only quantities of the same can be compared."

F. When you hear the statement, "The product of the means is equal to the product of the extremes," what do you think of, and why?

ACTIVITY II

You may choose any <u>four</u> of the following activities:

A. Find the answer to the following problem:

Formula: $W = \frac{1}{2}M + 7$; W = woman; M = man

Find the woman's age if the man's age is 22.

B. Using the same situation as above, find the man's age if we know the woman's age is 2

Formula: $2(W - 7)$

C. If a gear 10 inches in diameter has 70 teeth, how many teeth should a gear 18 inches in diameter have?

D. What number multiplied by 12 will equal 960?

E. If a photographer can take 26 photo shots in 3 hours, how many photo shots can be taken in 8 hours?

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Look at the list below and decide upon a speaker to come in and talk with your class on any job related topic that pertains to their profession.

SUGGESTED RESOURCE PERSONNEL

Photographer

Contractor

Marketing Researcher

Carpenter

EVALUATION

After you have completed this unit, ask your instructor for the "Formulas, Ratio, and Proportion" quiz, and see how much knowledge you have obtained.

Formulas

A formula is a short way writing the method to the solution of a problem. A formula gives us the directions to find the quantity we are looking for. A formula tells us which mathematical operations (adding, multiplying, etc.) to use with certain quantities.

Suppose you wanted to solve the problem of finding the number of square feet in a room which is 11 feet wide and 12 feet long. You probably already know that to find the area of a rectangle (the room is rectangular in shape) you can multiply the width times the length. You also probably know that the amount of a flat surface (called area) can be expressed in square feet (1 ft. x 1 ft.; $ft.^2$). A short way (formula) to write this direction is: area= length x width, or even shorter: a = l x w. Of course, the short formula is worthless to us if we aren't told what a, l, or w stands for.

Now to find the amount of area in the room we must know the amount of the length and the width. l = 12 ft. & w = 11 ft. we now substitute the amounts for the letters in the formula and perform the operation called for (multiply). a = 11 ft. x 12 ft.; l = 132 $ft.^2$

A scientist has said that one can tell the temperature by counting the chirps of a cricket. He gives the formula T= 1/4 C + 40, where C is the number of times the cricket

chirps per minute and T is the temperature. Suppose we count and find that the cricket chirps 16 every minute. What is the temperature? $44^{o}F$

Someone has said that the formula $W = \frac{1}{2}M + 7$ gives the proper relationship between the ages of a man and a woman at the time of marriage. In this formula W stands for the woman's age and M stands for the man's age. Find what the woman's age would be if the man's age was 20. $W = \frac{1}{2} \times 20 + 7$; $W = 17$; the women's age should be 17 years.

Now we might find the man's age if we know the woman's age. We use the same formula but change it around a little so that $W = \frac{1}{2}M + 7$ now becomes $M = 2(W - 7)$. Now what is the proper age of a man, for marriage, if the woman's age is 20? $M = 2(20 - 7)$; $M = 2(14)$; $M = 2 \times 14$; $M = 28$; the man's age should be 28 years.

There is a relationship between the proper cost of a house for a family income. It is expressed as $C = 104W$. Now C stands for the proper cost of a house and W stands for the family's average weekly income. Find how expensive a house one family should buy if their average weekly income is \$80. $C = \$8,320$.

Ratio

We can make up something like a formula if we can understand ratio. When we compare the amount (quantity) of one thing to the quantity of another thing, we make a ratio. A ratio shows us how things are related. If one

pencil is two inches long and another pencil is three o inches long, we can compare the lengths of the two pencils as two inches to three inches or 2" to 3" or in place of the <u>to</u> we can use a colon (:); 2" : 3". Another example would be in the comparison of a line 4" long to a line 6" or we can say the ratio of the lengths are compared we can say 4" to 6" or we can say the ratio or the lengths of the two lines is 4 : 6.

What is the ratio of the length of lines A to B? C to D? B to D? B to C?

A._____

B._____

C._____

D._____

Let's examine the ratio of line A to line D. It's expressed as 2:4, but we can't do anything with 2 : 4 except write it or say 2 to 4 ratio because the colon(:) does not represent a mathematical operation (adding, multiplying, etc.) Now it just so happens that if we express the relationship of line A to line D in a little bit different way we can substitute a division sign between A and D rather than just two dots; like this: line D is how much bigger than line A or how much smaller is line A than D; which is about the same thing as saying how many A's are in D or D can be divided by A how many times. Or

if you wish you can find the lowest common denominator of A and D and say that line D is 2 times longer than line A. But isn't 4 divided by 2 (4 - or 4/2) saying the same thing? Going backward we can say that the quotient of quantity divided by another of the same kind of quantity is called the ratio of the first to the second. The ratio of a 2 foot line to a 12 foot line is 2/12 or reduced to the lowest common terms 1/6 or it may be written 1:6. The ratio of 12 pounds to 3 pounds pounds is 12/3 or 4/1 which may be written 4:1.

What about the ratio of a two foot line to an 18 inch line? That's right, it's 24/18 or 4/3 or 4:3. You see we had to change feet to inches (2 feet = 24 inches) so both quantities were the same. Only quantities of the same kind can be compared. Try these:

1 pint to 2 pints or 1/2 or 1:2

9 inches to 2 yards or 9/72 or _____ or _____:_____

1 pound to 12 ounces or 16/12 or _____ or _____:_____

8 cents to 2 dollars _____ or _____ or _____:_____

Proportion

Now we are ready for the most useful part. Notice that the ratios 3/6 (3:6) and 4/8 (4:8) are equal because each may be reduced 1/2. So we can say that 3/6 = 4/8 or 3:6 = 4:8. Before we go ahead let's clear up one more thing. Suppose a steel bar is 6 feet long and weighs 144 pounds

and you were asked to express the relationship of its length in feet to its weight in pounds. You would say 6:144 is the length/weight ratio or its is 1/24 which can be written like 1/24 = length/weight ratio and we can divide 1 by 24 but remember we cannot divide 6 feet by 144 pounds. If we write 6 ft./144 lbs. we can't divide, but if we get rid of the feet and pounds by a little trick we end up with 6/144 = length/weight ratio and we can divide 6 by 144 since 6 and 144 are the same thing pure numbers. Now back to proportions.

If two ratios have the same values as in 3/6 = 4/8, we can express one of the ratios as being equal to the other. And with a little thought you can see why this important truth can be stated: <u>In any proportion, the product of the first and last term is equal to the product of the two middle terms</u>. You might have heard it expressed as <u>the product of the means is equal to the product of extremes</u>. For example, in the proportion 3/4 + 6/8 or 3:4 = 6:8, the product of the first term, 3, and the last term 8, is 24. Likewise, the product of the middle terms, 4, and 6, is 24. The first and last terms are sometimes called the extremes and the two middle terms are sometimes called the means. You can check a proportion; if the products of the extremes and the means are not equal it is not a true proportion. Remember the rule of the proportions above;

it's a key to solving many useful problems.

When three of the four terms in a proportion are known, the fourth may be found. One easy way to do this is to let X stand for the term that is missing, and place the product of the first and last terms to equal to the product of the middle terms and solve for X.

Problem: A man can make 75 boxes in 9 hours. At this rate, how many boxes can he make in 54 hours? Notice the ratios must be stated in boxes/hour; boxes on top and hours on bottom or boxes first and hours second. Like:

75.9 = X:54 now find the product of the extremes and means

75 x 54 = 9 x X

4040 = 9 x X What number multiplied by 9 will
450 = X equal 4050? Divide 4050 by 9 and find out.

Since X stands for boxes, we find he can make 450 boxes in 54 hours.

A toolmaker can grind 16 tools in 7 hours. At this rate, how many tools can he grind in 49 hours? 112 tools

What is the cost of 40 electric switches at $3.30 a dozen? $11.00

What is the cost of 31 pounds of nails if they are sold at the rate of $2.25 for 75 pounds?

If 3 gallons of paint will cover two square feet of surface, how many gallons of paint are needed for a house that has 3600 square feet of surface?

But please remember we have been talking about direct proportion; this is when we <u>increase</u> the number of one amount the other must also <u>increase</u> at an equal rate.

Some more direct proportion problems are found below:

1. A mechanic receives $31.50 for 18 hours work. How much should he receive for 45 hours work? $78.75

2. A bar of 2" square tool steel 1½ feet long weighs 18 pounds. What is the weight of a 2" square bar of tool steel 6 3/4 feet long? 81 pounds

3. A steel bar 6 feet long weighs 144 pounds. What would 2½ feet of the bar weigh? 60 pounds

4. If a gear 8 inches in diameter has 72 teeth, how many teeth should a gear 15 inches in diameter have? 35

5. If a gear 6¼ inches in diameter has 75 teeth, how many teeth should a gear 6 3/4 inches in diameter have? 81

6. If 15 sheets of galvanized steel weigh 325 pounds, what should be the weight of 33 sheets? 715 pounds

7. If 35 castings weigh 20 pounds, what should be the weight of 14 castings? 8 pounds

8. If 1¼ gallons of gasoline will keep an engine running for 1¼ hours, how many gallons of gasoline are needed to keep the engine running 6 hours? 3 and 1/3 gallons

9. If 28 pounds of nails cost $2.45, what is the cost of 16 pounds? $1.40

UNIT XXVIII

FORMULAS, RATIO, AND PROPORTION

True-False

_____ 1. A formula is a short method of writing the solution of a problem.

_____ 2. When working with ratios, only quantities of the same kind can be compared.

_____ 3. A ratio shows us how things are unrelated.

_____ 4. When you say 2 quarts to 3 quarts, it means the same as saying 2:3.

_____ 5. If three of the four terms in a proportion are known, the fourth can be found.

Problem Solving

_____ 6. A beautician receives $25.75 for 15 hours work. How much should she receive for 20 hours of work?

_____ 7. What is the cost of 50 light bulbs at $2.60 a dozen?

_____ 8. If 12 fire logs weigh 100 pounds, what should be the weight of 28 fire logs?

_____ 9. An electrician receives $33.39 for 9 hours. How much should he receive for 13 hours of work?

_____ 10. What is the price of 60 cans of corn if the price of one can is $.13.

UNIT XXIX

Measuring And Buying Electricity

UNIT XXIX: Measuring and Buying Electricity

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student should become more aware of the appliances and products that cause the soaring prices of electricity. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with the unit of measure called Kilowatt-hour.
2. To help the student learn how to do mathematical problems using kilowatt-hours.

INTRODUCTION:

Electricity has become a very popular subject among business owners, homeowners, and anyone else with access to it.

This unit exposes the student to the many aspects of electricity. It also explains the unit of measure called kilowatt-hour, which is used to measure electricity.

ACTIVITY I

Everyone must select (A), and then any two of the following:

A. Read page 196 in the General Related Curriculum Guide, Volume 2, or read the self-contained study sheets that are attached to this unit.

B. Explain the meaning of a kilowatt-hour and its purpose.

C. When you are buying appliances, what should you consider concerning the operation of it?

D. Name all of the convenience appliances that can be used in the home.

ACTIVITY II

Choose any two of the following activities:

A. Try checking your home meter box and see how close you will come to the actual kilowatts used in one month.

B. Using resources from the library, find out how power companies got their start and how they actually operate.

C. List several ways in which you could help cut the electricity cost in the home.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Ask a local representative from Duke Power to come and speak with your class on the "Cost of Electricity."

SUGGESTED RESOURCE PERSONNEL

Electrician

Electrical Engineer

Electronics Technician

EVALUATION

After you have completed this unit on "Measuring and Buying Electricity", ask your instructor for the quiz, and see how much knowledge you have obtained.

Measuring and Buying Electricity

Electricity for lights and other electrical appliances is measured by an electric meter. The unit of measure is the kilowatt-hour, (kwh) which is 1000 watt-hours.

If a 1000-watt heater is used for one hour, or a 100-watt light is burned for 10 hours, 1 kilowatt-hour of electricity is used (1 kilowatt = 1000 watts). On most of the electric appliances used in the home you can find a label that tells the amount of electricity they use.

PROBLEMS:

1. On October 1, the meter in Mr. Anderson's house read 4642 kwh. On November 1, the reading was 4677. How many kwh were used?

   ANSWER: 35 kwh

2. The following rates are charged by Mr. Anderson's city:

First 20 kwh	9¢ a kwh
Remainder at	5¢ a kwh

   Find the cost of the electricity used by Mr. Anderson during October.

   ANSWER: 25 hours

Transportation and Travel

Jim used 8½ gallons of gasoline in driving his car 136 miles. How many miles did his car average per gallon of gasoline?

Mr. Brown's car averages 15 miles per gallon of gasoline. How far can he travel on 9 gallons of gasoline?

A truck driver traveled 374 miles in 8½ hours. What was his average rate in miles per hour?

UNIT XXIX

MEASURING AND BUYING ELECTRICITY

True-False

_____ 1. An electric meter is used to measure electricity for lights and other electrical appliances.

_____ 2. The unit of measure is called the kilowatt-hour.

_____ 3. There is never a label on electrical appliances that tells the amount of the electricity they use.

Problem Solving

_____ 4. On April 1, the meter in Mr. Price's house read 5062 kwh. On May 1, the reading was 5185. How many kwh were used?

_____ 5. On June 1, the meter read 6589. On July 1, the reading showed they had used 65 kwh. What was the reading?

_____ 6. What would be the cost of your power bill if you used 1500 kwh. Use the chart below to compute the answer:

Up to 70 =	$4.50	
Next 150 =	.0324	per kwh
Next 780 =	.025	per kwh
Over 1000=	.021	per kwh

UNIT XXIX

MEASURING AND BUYING ELECTRICITY

True-False

1. True
2.
2. True

3. False

Problem Solving

4. 123

5. 6654

6. $39.36

UNIT XXX

Science

UNIT XXX: Science

PREREQUISITE: None

TERMINAL OBJECTIVE:

Upon the completion of this unit, the student will have a better understanding of the functions of the physical world and universe. Evidence of this will be shown by a score of 80% on the post-test.

AIMS AND OBJECTIVES:

1. To acquaint the student with the meaning of scientific method.
2. To help the student learn the steps involved in experimentation.
3. To expose the student to the law of trial and error.

INTRODUCTION:

The universe has always been a controversial subject among man since the beginning of time. The scientific method is a discovery that man came across. This method begins with a question or problem and there are steps involved.

Before the scientific method, man's discoveries came about mostly by trial and error. This method is valid, but it could become very expensive.

ACTIVITY I

Everyone must select (A), and then any two of the following:

A. Read pages 198-204 in the General Related Curriculum Guide, Volume II, or read the self-contained study sheets that are attached to this unit.

B. Why should you not try to pull or push too much electricity through small wires?

C. Explain the law of trial and error.

ACTIVITY II

Select any <u>two</u> of the following activities.

A. When you go to a service station, which grade of gas would you select? Regular, Super, or High Test? Why?

B. There has been a lot of controversy over the usage of gasoline. List some ways in which you could conserve energy?

C. Choose a topic pertaining to any type of energy, such as heat energy, gravitational energy, etc. and write a one-page report on your findings. (These topics can be found within the chapter.

OTHER ACTIVITIES USING OUTSIDE RESOURCES FOR CLASS PARTICIPATION

Invite a teacher from your Science Department to come in and speak to your class on the many areas that involve science.

SUGGESTED RESOURCE PERSONNEL

Science Teacher

Scientist

Biologist

Biochemist

Doctor

Nurse

Laboratory Technician

EVALUATION

After you have completed this unit, ask your instructor for the "Science" quiz and see how much knowledge you have obtained.

SCIENCE

Through the years, man through his efforts to find the how and why of the physical world and universe has accumulated some important ideas that may be of some use to you in your everyday living.

Probably the most wonderful idea that man hit upon is called the scientific method. The word scientific is somewhat misleading since the method can be used by people who are not scientists. The method begins with a question or problem. Now it is very important for the person to want very much to find an answer to his problem or question, since it will require some time and effort. Issac Newton wanted to find out what forces caused the planets to move in their paths around the sun. The question was of such importance to Newton that he spent many years and much effort to find the answer and he was successful. Bill Jones wanted to know what was the best car he could buy for the money and his question was of such importance that he spent several weeks and much time and effort. He too was successful. After the important question the next move is to observe and find out all there is to know about the subject. You can look, read, or even ask other people. By now you might have a hint about the answer. The next step is tricky and requires some clear and unprejudiced thinking. The facts must fit the answer that you had in mind. If not, the facts must be studied

more for a possible answer. But remember the facts and answer must make "sense". Experimentation or testing is the final step. Newton's answer fit all moving bodies from falling apples to circling planets. Bill's answer was tested after he tried out the car.

Before man found out about the scientific method, most of his discoveries and inventions may have come from the trial and error method. Now this method will work, but it is very expensive and time consuming. Think about what it might have cost Bill Jones to solve his problem by the trial and error method.

If you are successful, someone will be paying for the use of your energy and time. And it is for this reason that you could use some ideas about energy. Remember, energy can be in many forms; electricity energy, heat energy, chemical energy, mechanical energy, light energy, magnetic energy, gravitational energy, and nuclear energy.

Electrical energy can't be saved; it must be used as it is made. You can control it by the use of insulating materials such as glass and asbestos and rubber. This energy can move easily through metals (both in a solid form or disolved in liquids.) It has been found that if you push a lot of electricity through a piece of metal or small diameter the metal will heat up. The metal can get hot enough to burn a house down or just warm enough to feel good in a blanket

on a cold night. If the metal wire is small enough the electricity will cause it to glow slowly and give off light energy and heat energy. So don't try to pull or push too much electricity through small wires unless you want the wire to heat up. By the way, household electrical energy is strong enough (11 volts) to kill a person.

Heat energy flows nicely through solids, slowly through liquids, slower through air and other gases, but will not flow at all through nothing (empty space or vacuum). Today man still does not know how to save heat energy and use it over again, if we did we could have machines that once started with heat energy would run forever without adding more fuel.

Magnetic energy can be linked closely with electrical energy although there seems to be some differences. A magnetized piece of metal can exert a push or a pull on certain kinds of matter at a distance without direct contact with the matter. Electrical energy through a wire will produce magnetic energy (magnetic field) and a wire pulled through a magnetic field will produce electrical energy in the wire. This is the way man produces electrical energy (generator) to do some of his work. Magnetic energy from a small magnet will change the course of moving electrons such as found in a television tube. The earth has a little magnetic energy which accounts for a useful instrument called a compass.

Gravitational energy accounts for the pull of the earth on everyday objects (apples, cars, water, etc.) and in part for the paths of the planets. Issac Newton found that all bodies in the universe (except) for small ones such as electrons) followed these set of rules: (1) They will remain at rest until acted on by another force (you can be sure that the book left on the desk will be there tomorrow unless moved by another force). (2) Once an object is in motion it will remain in motion forever until acted on by another force or object. (If you throw a rock, it will move in a straight line forever unless it comes in contact with another object or is acted upon by another force; say gravitational energy.) (3) Every object in the universe exerts a pull (gravitational energy) on every object. The bigger and heavier the object the greater the pull, and the closer the objects are to each other the greater the pull. It is with these rules formulated almost 300 years ago that man has been able to make the calculations for exploring the moon.

Nuclear energy, which the E stands for in the E = mC2 formula was predicted by Albert Einstein. It is the energy that holds the nucleus of an atom together and it is very powerful. A small handful of uranium will produce as much heat as 2.3 million pounds of coal, but the method of changing nuclear energy into heat energy is so expensive that there

are only a relatively few nuclear producing plants in the U.S.A. Man first learned to use nuclear energy when he wanted a powerful weapon of war.

Chemical energy is the only kind of energy that plants, animals, and human beings can use directly for living, but this does not mean that living things can live without all of the other forms of energy as you probably know or will find out from further reading. Chemical energy is released in the form of heat when organic matter (wood, potatoes, fat, oil, coal, sugar, etc.) is burned. Man has learned by trial and error that fuels such as wood, coal, and oil burn at about the right rate for warming up his immediate environment. With some precautions these fuels can be used inside his home. By keeping his outside environment as warm as about seventy degrees he can save on the fuel that his body burns. It is that internal body fuel (food) that when burned slowly by other chemicals in the body that produces heat energy from the chemical energy.

Mechanical Energy--The chemical energy from food is converted into heat energy to maintain life and to give motions for action. We call this energy of motion mechanical energy. We push or pull an object that moves and we have transmitted our mechanical energy to the object. The thrown ball as it moves through the air has mechanical energy. We lift a book from the floor and place it on a

desk. The book lying on the desk now has mechanical energy in moving. The energy of moving machines is mechanical energy.

Conservation of energy--If we were to use our energy to spin a wheel on a shaft it would seem that the total energy we put into the wheel should equal the amount of energy the wheel had. Now we know from experience that the wheel will eventually stop spinning. We also know that there is friction or rubbing of the wheels on the shaft. Perhaps oil will prevent the friction entirely or even a perfectly smooth surface? No, the wheel soon stops. We also know that friction produces heat energy. But if all friction could be eliminated, there is no reason why a machine should not continue to run without any supply of energy after it was once started. Is the energy that disappears because of friction really lost? But if the heat energy produced by the friction is added to the mechanical energy on the moving wheel, the sum will equal the amount of energy we put into the wheel to get it moving. If all the different sorts of energy that go into a transformation are added together and if all the energy produced is accounted for, the two sums are precisely equal. In other words, so far as we know: ENERGY CANNOT BE CREATED OR DESTROYED. This general statement is known as the Law of Conservation of Energy.

Another law that we should remember concerns a common experience. Coal burning in a fireplace warms the air of a room; when the fire goes out, the warmth persists for a little while, but spreads gradually to the wall, to adjoining rooms, to the outside air, and presently is distributed so widely through the surroundings that we can no longer detect it. From any hot object heat flows in like manner to cooler objects about it, spreading indefinitely until it becomes part of the earth, atmosphere, and space. The energy has not disappeared, but is no longer available for conversion into other forms of energy. We may summarize these observations on heat by the form of law statement: IN EVERY ENERGY TRANSFORMATION, SOME OF THE ORIGINAL ENERGY IS ALWAYS CHANGED INTO HEAT ENERGY AND NOT AVAILABLE FOR FURTHER TRANSFORMATIONS.

As far as we know this law form of heat energy is not available for use by man. The light energy from the stars, the chemical energy of food, all are being steadily changed into a low form of unavailable heat energy. The law implies that the distant future will bring a time when there is no energy but heat energy. Heat energy evenly distributed so that no part of the universe is warmer than another, or the so called "heat death" of the universe.

Energy in General--Now let's see how all of these energies are important to you and your success in this world.

We'll start with the sun which produces heat and light energy from nuclear energy. It is the heat that spreads water around to all of us and prevents it from settling in the deep holes in the earth. When the gravitational energy pulls the water from the high places to the low places, man places wheels in energy fields and produces electrical energy and this is channeled into his homes and factories to turn wheels, produce heat, and light. The light energy from the sun is converted into chemical energy by source of energy for living. It just so happens that is the same food that animals and man must have for their energy for living. Man has found great stores of concentrated chemical energy in the form of fossil fuels (ancient remains of plants) which can be converted into heat energy to warm him and to convert to electrical energy for his machines.

Problems--Your success in life will depend to a great degree on how well you can control and conserve energy. When work is done energy is used, or before work is done there must be available energy. In everyday life we don't go around talking about energy very much. We do talk of work or job, or careers or salary or money. If you will think for a minute you will see what money stands for--yes, it stands for energy in our society. Now if you had an unlimited supply of food, coal, and oil (natural sources of energy) you would need no money. But you don't!

So you go to work and sell your energy and time to someone who needs it. Remember you get paid for the use of your energy and time, although there is a bonus for experience and training. This represents how we know that an efficient person uses less energy and time in his work than an inefficient worker.

Well now perhaps you would like to answer some of these questions. Remember money represents energy.

1. What is the best source of energy for your car? Super? High test? Regular?
2. How can you drive your car to get the most efficient use of energy?
3. Do you think it takes energy to stay cool in hot weather?
4. Compare what you will pay for energy and the conservation of energy a month compared with the amount of money you will get paid for the use of your energy. Are they equal?

UNIT XXX: SCIENCE

True-False

_____ 1. Energy can be found in many forms.

_____ 2. Electrical energy can be saved.

_____ 3. Electrical energy can be controlled by the use of insulating materials.

_____ 4. Household electrical energy is strong enough to kill a person.

_____ 5. Heat energy flows rapidly through air and other gases.

_____ 6. Nuclear energy accounts for the pull of the earth on everyday objects.

_____ 7. Chemical energy is the only kind of energy that plants, animals, and human beings can use directly for living.

INTRODUCTION

This manual was sponsored by the Guidance Oriented Alternative Work Experience Project, Grant Number OEG-0-74-8580, Project Number V0180VZ, a federally funded occupational research project.

The project staff felt a manual of this type would enhance technical related instruction in textile manufacturing as it relates to industrial cooperative training programs.

Michael K. Holt
Textile Coordinator

A BIRD'S-EYE VIEW OF THE

Cleaning the cotton- Removal of seeds and all foreign matter

1. HARVESTING

2. GINNING

3. OPENING-BLENDING

4. PICKING

MUCH OF THE REMAINING SEED AND FOREIGN MATTER IS REMOVED FROM COTTON HERE-

IT IS THEN FORMED INTO A ROLL OR "LAP".

5. CARDING

HERE THE LAP IS BRUSHED OUT INTO A THIN MIST-LIKE SHEET: THEN SHAPED INTO A ROUND FORM CALLED A "SLIVER".

6. DOUBLING

TWENTY SLIVERS ARE THEN COMBINED INTO A BLANKET OR LAP WHICH IS WOUND INTO ROLLS-

Parallelizing of the fibres

Making the yarn

7. COMBING

REMOVES THE SHORT FIBRES- THEN CONDENSES THE LAPS INTO A SINGLE SLIVER AGAIN.

8. DRAWING

THE DRAWING FRAME DRAWS OUT SEVERAL SLIVERS AND CONDENSES THEM INTO ONE.

9. SLUBBING

THIS MACHINE DRAWS OUT THE SLIVER STILL MORE. NOW CALLED ROVING, IT GOES TO THE SPINNING FRAME WHERE IT IS TWISTED AND WOUND ONTO BOBBINS.

10. SPINNING

THE BOBBINS OF ROVING ARE MOUNTED ON THE SPINNING FRAME WHERE THE STRANDS OF COTTON ARE PUT BETWEEN ROLLERS AND ARE GIVEN THEIR FINAL DRAWING. THE DESIRED TWIST PER INCH IS GIVEN BY THE RATIO OF SPEED OF THE FRONT STEEL ROLLER TO THE SPINDLE. IT IS NOW YARN AND IS AGAIN WOUND ON BOBBINS.

J-3

MANUFACTURE OF COTTON CLOTH

11. SPOOLING

SPOOLER

THE YARN IS NOW WOUND FROM THE BOBBINS ONTO LARGE CHEESES WHICH HOLD FROM 7 TO 8 BOBBINS OF YARN IN ONE CONTINUOUS LENGTH.

12. WARPING

WARPER

THEN THE STRANDS OR "ENDS" FROM HUNDREDS OF THESE CHEESES ARE WOUND EVENLY AND PARALLEL ON A WARPER BEAM WHICH IS, IN EFFECT, A LARGE SPOOL.

13. SLASHING

SLASHER

THE WARPER BEAMS ARE NEXT PLACED ON THE SLASHER MACHINE, WHERE THE YARN IS GIVEN A PROTECTIVE COAT OF SIZE TO RESIST THE ACTION OF THE SHUTTLE, AND HOLD THE THREADS IN PLACE DURING THE WEAVING PROCESS. THE SLASHER ALSO DRIES THE SIZE COAT AFTER WHICH THE WARP THREADS ARE WOUND ON A LOOM BEAM.

14. DRAWING-IN

WARP DRAWING MACHINE

THE LOOM BEAM IS NOW TAKEN TO A DRAWING-IN FRAME WHERE EACH WARP THREAD OR "END" IS DRAWN THRU A DROP WIRE, THE EYE OF A HEDDLE, AND BETWEEN THE WIRES OF A REED.

15. WINDING

FILLING BOBBIN WINDER

THIS MACHINE WINDS THE FILLING BOBBINS WHICH FIT INTO THE LOOM SHUTTLE. THE YARN IS WOUND FROM DYED PACKAGES.

16. WEAVING

BOX LOOM

CLOTH CONSISTS OF WARP YARN, RUNNING LENGTHWISE THE CLOTH-AND FILLING YARN, RUNNING CROSSWISE.

WEAVING CONSISTS OF INTERLACING WARP AND FILLING TO PRODUCE STRENGTH, TEXTURE, AND VARIOUS DESIGNS IN THE CLOTH.

THE LOOM WHICH WEAVES THE CLOTH CONSISTS OF A FRAME FOR HOLDING THE WARPER BEAM, DROP WIRES, HEDDLES, HARNESSES, REEDS, SHUTTLES (WITH THE BOBBINS OF FILLING YARN), WOVEN CLOTH AND THE OPERATING MECHANISM, MOST OF WHICH IS AUTOMATIC.

A SHORT HISTORY OF AMERICAN TEXTILES

The textile industry is one of man's oldest industries. The American textile industry was stimulated in its early beginning by a grant of funds from the Massachusetts Legislature to help in the production of the nation's first textile machines. Up until this time most textile products were produced in the home by the domestic system.

The British were the unquestioned leaders of the textile industry during the latter part of the 18th century and the early 19th century. The British parliament passed laws which forbid textile technicians to leave the country. In this manner they hoped to prevent any other country from learning their textile secrets. Their policy worked very well until 1789, when a young Englishman, Samuel Slater, slipped aboard an American bound vessel and landed in America. Slater had worked in Great Britain's most modern textile mill and had memorized how the textile machines were made.

Slater entered into partnership with Moses Brown, an American textile mill owner. He rebuilt all of the machines in Brown's mill at Pawtucket, Rhode Island and launched America's first modern textile industry. Samuel Slater is considered to be "The Father of American Manufacturing."

In 1793, Eli Whitney invented the cotton gin. This invention made it possible to separate the cotton fiber from the seed. With Whitney's invention, one man could

separate as much cotton in a day as fifty could by hand. When the cotton gin was powered, its productive capacity increased by twenty fold. This invention made cotton fibers available in great quantity.

While Slater had introduced modern yarn making methods, the weaving process was still done on hand looms. In 1812, a young Boston merchant, Frances Cabot Lowell, went to Great Britain to observe a modern power loom in operation and to memorize the details of its construction. He returned to America and built a power loom. In 1814, he built the world's first powered textile plant at Waltham, Massachusetts.

From the work of these early textile pioneers, the basis of our textile industry was established. The textile industry slowly moved from New England to the source of its raw materials, the South. Today the American textile industry is truly nation-wide with 7,500 plants in 42 states employing around 900,000 people and annually producing about 15 billion square yards of fabric with annual sales between 16 and 18 billion dollars. The textile industry forms one of the corner stones of America's productive free enterprize system.[2]

YARN PRODUCTION

We must start our story of yarn production with the opening room. In this area, the bales of cotton or man-made fibers are broken open. The fiber is usually fed into a blender where two or more different kinds of fiber might be mixed. The blender also breaks and fluffs the layers of fiber. The fiber is then transported from the opening room by conveyor tubes to the cardroom.

In the cardroom the picking machine separates, cleans, and fluffs up the fiber and forms the fiber into a uniform roll called a lap. Reworkable waste is also fed into the pickers. The carding machine cleans the fibers and straightens the fibers into parallel alignment. The lap is brushed out into a thin mistlike sheet; then, it is shaped into a round strand called a sliver. If high quality clean yarn is desired, the carding sliver is fed from the card cones sliver lapper which drives out and combines several of the strands of sliver into a sheet and winds this sheet onto a spool. This process tends to further arrange the fibers in parallel alignment. The laps are then fed into the combing machine. The purpose of the combing machine is to remove the short fibers, the tangled fibers (neps), and any remaining foreign matter. This lap is returned into a single sliver again. This sliver is deposited in a tall container and moved to the drawing frames. Sometimes up to 15 percent of the fiber is removed as waste. The

drawing machine combines several slivers into one and draws the resultant sliver until it is about the same size and weight of one of the original strands. This combined sliver is superior to anyone of the original slivers in uniformity.

The next process is slubbing. In this process, the fiber will result in a strand similar to yarn. The slubbing machine is sometimes referred to as a fly frame or roving frame. The slubbers transform the thick drawing slivers into a heavy, slightly twisted strand of fibers called roving. Up to this point, the processes which the fiber has been through have been concerned with cleaning the fiber and arrangement of the fiber in parallel lines. The fiber delivered to the spinning department is very weak and breaks easily. The bobbins of the roving machines are mounted on the spinning frame where the strands of fiber again pass between rollers and receive their final drawing. The desired twist per inch is given by the ratio of speed of the front steel roller to the spinning spindle. It is now yarn and is again wound on bobbins. This yarn is strong enough to undergo subsequent processes.

The yarn on the spinning bobbins contain considerable twist and tend to snarl when removed from the bobbin. Therefore, it is necessary to condition this yarn by putting it in a conditioner and steaming it to set the twist.

If the yarn is to be used as warp yarn, it must undergo several different processes. If ply yarn is wanted, it

can be obtained by twisting two or more strands of yarn together. The twisted yarn is wound onto a bobbin. The twisting bobbins hold relatively short lengths of yarn. To eliminate the necessity for piercing up these short lengths and having the creels of the machine in these operations continuously running out, the twister or spinning bobbins are put on a winder. The winding machine winds off the twister as spinner bobbins onto spools, large cones, as cheeses in a continuous strand. The yarn is then ready for warp weaving.[3]

PRIMARY FUNCTIONS: Responsible for accuracy of all blends. Sets weights on hopper drops, weighs out stock. Does minor fixing. Feeds hoppers and doffs bales from press.

MACHINES, TOOLS, AND EQUIPMENT USED: Calculators, seven-hopper fiber control feed line, Lummus Bale press, Carolina waste machine, fork lift, bale tickets, blend sheet, scales, electric hoist hand tools

Upon completion of each division the supervisor will initial and give the date of completion.

ACCOMPLISHED SUPERVISOR'S INITIALS DATE

DIVISION AND JOBS

I. Bring Bales to Blenders

A. Haul in bales from storage.
   1. Get fork lift truck and ride to warehouse.
   2. Load two proper bales on truck and haul to line.
   3. Place bales in front of the hopper.

B. Weigh out
   1. Transfer stock between hoppers.
   2. Feed stock on floor into hoppers.
   3. Place leftover stock on scales.
   4. Record weight on ticket.
   5. Collect hopper tickets.
   6. Make leftover bale tickets.
   7. Record bale weights on blend sheet.
   8. Determine blend number.
   9. Adjust hopper settings.

C. Make bale tickets.
   1. Prepare new bale tickets include lot number, bale number, batch number on each ticket.

	ACCOMPL. SUPERVISOR INITIAL DATE
D. Feed waste into waste machine. 1. Carry bag of waste to waste machine and empty into waste machine.	
DIVISION COMPLETED	
II. Remaining Doffed Bales	
A. Haul doffed bales to storage. 1. Get fork lift truck and haul bale to storage area. B. Haul bales to picker storage. 1. Get fork lift truck and haul bales to storage area.	
DIVISION COMPLETED	
III. Blend change.	
A. Prepare for blend change. 1. Turn off hoppers as they run out. 2. Stop waste machine. 3. Begin new blend sheet. 4. Copy proper hopper settings onto card from notebook. B. Clean up at blend change 1. Use air hose to blow out and pick feed apron and tint nozzles. 2. Clean beaters in incline conveyor. 3. With pliers turn off tint pump. 4. Empty tint over flow bucket. 5. Disconnect tubing to nozzles. 6. Turn on feed apron at tint nozzles. 7. Get water hose, wash out tint pump reservoir wash feed apron, frame and sides around feed apron. 8. Drain water from tint pump reservoir.	
DIVISION COMPLETED	
IV. Start up after blend change.	
A. Drain out new tint into overflow bucket. 1. Connect tubing to nozzles, turn on tint. 2. Adjust ounces per drop. 3. Turn on power to line. 4. Start hoppers. 5. Turn on press. 6. Start waste machine.	
DIVISION COMPLETED	

ACCOUNTING SUPERVISOR INITIALS DATE

V. Work with tint

A. Mix tint.
1. Wash out mixing drum.
2. Fill drum with water and steam to ten gallons.
3. Check tint formula.
4. Weigh out powder and pour into mixing drum.
5. Fill drum to 30 gallons of steam and water.
6. Turn on pump and pump tint into mixing drum.
7. Mark tint consumption record.
8. Wash out tint mix drum with water.

B. Pump tint upstairs.
1. Drain all container valves and close valves.
2. Run water into line and flush it.
3. Close drain valve after water has drained out of the line.
4. Open valves upstairs and turn on pump.
5. Open line into upstairs container and check as container fills.
6. Close valves to container upstairs when filled.

C. Clean plastic tint container.
1. Open valve from plastic container and drain out all tint.
2. Wash out container tint line and the area around the container.

DIVISION COMPLETED

VI. Instruction, aid to Balers

A. Instruct balers as necessary.
B. Aid balers in feeding lines proper stock lay down and operation of waste machine.

DIVISION COMPLETED

VII. Shift work

A. Fill hydrolic press reservoir.
1. Check fluid level daily.

B. Maintenance and repair work.
1. Make repairs to hoppers and press as needed.
2. Remove hopper chokes.
3. Repair rollers and aprons in waste machines.

C. Check blend line.
1. Check bale tickets to hopper tickets for identification.
2. Check tint nozzles for proper tint spray.
3. Record production and downtime at end of shift.

DIVISION COMPLETED

ACCOMPLISHED SUPERVISOR INITIALS DATE

VIII. Mix Napco oil

A. Wash out mixing drum.
B. Pour oil into drum and steam it until it is thin and pump it upstairs.
C. Drain and wash out mixing drum.

DIVISION COMPLETED

IX. Haul bale ties to blending

A. Drive fork truck to picker room.
   1. Load truck of bale ties on fork truck.
   2. Straighten ties on truck.
   3. Haul truck of ties to bale blend area and unload ties.

DIVISION COMPLETED

X. Haul reusable cardboard from pickers to blending.

A. Drive fork truck to rear platform and load cardboard covers.
B. Drive to blending room and unload.

DIVISION COMPLETED

Total Training Time, Half-Time Basis -- 44 weeks

I. Baler

A. Wait for tramp to position.
   1. Buzzer signals that a bale is ready to doff.
   2. Operator stops dump counter.
   3. Locks tramp in place to keep the tramp up.
B. Unlatch, turn, and latch box.
C. Secure top bale cover and position it.
D. Press Bale.
   1. Turn lever to lower press.
E. Open doors and release sides.
F. Turn down cover on top.
G. Place ties in position under the bale.
H. 1. Push ties through.
H. Turn down on top.
I. Push back door closed.
J. Pull ends of ties together and hook.
   1. Raise and secure ties.

	ACCOMPLISHED SUPERVISOR'S INITIALS DATE
K. Roll bale out of press 1. Position bale so it can be picked up with a truck. L. Secure bottom of bale cover and install. M. Adjust sides and close doors. N. Truck bale to storage area and unload. O. Return truck to bale press and position. P. Take empty bale tie truck to warehouse storage. 1. Secure full bale tie truck. DIVISION COMPLETED	
II. Baler Cleaner. A. Clean tramp screen. 1. Use air hose and/or broom. B. Wipe stock from bale press door. C. Sweep around bale press. 1. Deposit waste in proper container. D. Pull waste from inclined conveyor. 1. Places waste in proper container. E. Clean condensor. F. Blow off press at end of shift. G. Close press doors at end of the shift. H. Close press control levers at end of the shift. DIVISION COMPLETED	
III. Feeder operation. A. Position bale at hopper, check ticket number, place ticket on hook. B. Secure bale opener and shield. C. Cut bands or wire on bale. 1. Remove bands from bale. 2. Fold bands from bale and place them in a tie truck. 3. Replace cutter and bale shield back to storage area. D. Pick up spilled stock and put into hopper. 1. Take waste to waste machine. 2. Check waste machine operation to insure proper operation. E. Run out hoppers. 1. Make sure hoppers run out even. F. Gather stock and place on scales to form a piece bale. 1. Weigh and tie up piece bale. G. Stop and start blend line. DIVISION COMPLETED	
IV. Feeder cleaning operations. A. Sweep around hoppers.

   3. Start frame.
D. Mechanical break
   1. Check for faults.
   2. Start machine.
E. Front Break
   1. Repair sliver break
   2. Remove coiler chokes

DIVISION COMPLETED

II. Creel Breaker Drawing Frames

A. Take out empty can, creel full can, and the start frame.
   1. Remove empty creel can to storage area.
   2. Push full can into creel place.
   3. Thread the end over the creel guides and knock-off spoon and into the bite of the back rollers.
   4. Press the start button.
B. Set in turn can
   1. Remove empty can and replace it with a full one.
   2. Thread the end through the creel guides, over the knock-off spoon and into the bite of the back rollers.
   3. Start frame.
   4. Push can to the front of the breakers or finishers.
C. Remove waste from tank.
   1. Open waste tank door.
   2. Remove waste and deposit it in a waste can.

DIVISION COMPLETED

III. Creel and Clean Finisher

A. Break out creel
   1. Break out all ends.
   2. Pull partially full cans out, one at a time.
   3. Place cans behind finisher creel.
B. Turn cans into one can.
   1. Splice the sliver ends of 13 cans with the end of one can.
   2. Place the waste into the one can in a single strand.
C. Push empty cans to breaker drawing.
   1. Remove the empty can from the creel and place it near the breaker frames to be doffed.

	ACCOMPLISHED SUPERVISOR INITIALS DATE
D. Push finisher turn can to breaker drawing. 1. Push turn can to side of breaker drawing creel. E. Remove waste from tank. 1. Remove waste from tank and place in waste containers. F. Get air hose, blow off front and back of each frame. 1. Remove hose from its hanger. 2. Blow out the rollers the can tables and other related of the front of the frame. 3. Blow off the creel hangers and back of the frame. G. Set in new creel and put up ends. 1. Set 14 cans into the creel. 2. Thread the ends over the creel guides and over the knock-off spoons. 3. Hold the ends of one delivery at the bit of the back rolls, press the start button. 4. Repeat with second delivery. 5. Roll the seven ends of each delivery into a single strand and run these strands through the sliver chutes and into the trumpet of the coiler. 6. Start machine. 7. Repair ends.	
DIVISION COMPLETED	
IV. Doffing Breaker and Finisher Drawing Frames A. Replace cans. 1. Remove full cans from coiler with one hand while placing the other hand on top of the sliver to prevent it from spilling. 2. Place full can in back of finisher drawing creel. 3. Remove second can from coiler and replace both cans with two empty cans. B. Reset yardage knock-off counter. C. Blow off front of frame. 1. Remove air hose from hangers. 2. Blow off coiler, rolls, spoon guide wires front of the frame and can table.	
DIVISION COMPLETED	
V. Shift work A. Set hank clock on all assigned frames. B. Secure goggles, and brushes from the storage area. C. Blow off head of frames D. Remove waste from vacuum tubes. E. Blow lent from trumpet pads. F. Pick waste from rolls.

INITIALS
DATE

E. Guide standing under the feed roll until the new lap is running properly.
F. Lift lap off the feed roll and turn backward to remove any slack

DIVISION COMPLETED

III. Hanging Laps

A. Obtain a truck of the proper laps (identified by color).
B. Push laps to proper cards.
C. Place laps on proper.
D. Remove paper from lap.
E. Remove a portion of the starting end which may have been damaged.
F. Place waste in proper container.
G. Police up area and return lap pins, paper and truck to lap storage area.

DIVISION COMPLETED

IV. Repairing Breaks

A. Calender roll and sliver break.
   1. Clear waste from calender roll, doffer and doffer comb area.
   2. Reach into center of the web and grasp a portion of the stack and twist it into a tight pointed tail.
   3. Feed through the trumpet into the calender rolls.
   4. Feed rest of the stock through rolls.
   5. Break the sliver just in front of the calender roll and twist into a point.
   6. Feed this point into the trumpet and calender rolls of the coiler head.
B. Repair Coiler Choke
   1. Try to pull fibers causing the choke clear with fingers or pliers.
   2. If you have to remove the coiler bonnet, stop the doffer before you clear the obstruction from the rolls or gears.
C. Repair split laps
   1. Separate the lap by layers.
   2. If the lap cannot be straightened tear it apart and place it in reworkable waste containers.

DIVISION COMPLETED

V. Cleaning Duties

A. Brush front of card, coiler head and doffer bonnet, four times per shift.
   1. Place rail brush on one of the doffer bonnets when not in use.

B. Mop sides and back of card.
   1. Store mop under the front section of a card when it is not being used.

C. Clean calender roll cleaners.
   1. Remove the top and bottom cleaners from their position on the rolls.
   2. Brush the inside and outside surface area with a rail.
   3. Reposition cleaners on the calender rolls.

D. Strip scavenger roll.
   1. Lift the scavenger roll from its position on the feed roll.
   2. Strip the accumulation of short fibers off the roll into a draw can.
   3. When cleaning cycle is completed empty this waste into proper area.

E. Roll toppins
   1. Sift the Thompson roll from its position at the front of the card.
   2. Strip the accumulation of short fibers off the roll into a draw can.
   3. When cleaning cycle is completed, empty this waste into proper areas.

F. Clean huckle comb.
   1. Use rail brush for this job.

G. Clean feed rolls.
   1. Pick all hard packed lint from the surface of the feed roll.
   2. Pick or brush the lint from the feed roll bearing area.

DIVISION COMPLETED

VI. Patrol Assigned Cards

A. Patrol cards looking for down ends, laps running low, and quality problems.

DIVISION COMPLETED

VII. Quality

A. Keep lap running straight.
B. Watch for splitting laps.
C. Watch for naps and holes in lap.

ACCOMPLISHED SUPERVISOR'S INITIALS DATE

D. Report any quality or mechanical problems to your section man.
E. Flag your machine by stopping the front section and raising the coiler bonnet. (This is a signal to four section men that the machine needs attention.

DIVISION AND JOBS

I. Doff Roving Frame

A. Restart frame to run additional sliver up from the creel and roving onto the bobbin.
B. Run sliver through the rolls until sliver splices are on the outer layer of the bobbin.
C. Turn flyers by hand until they are at the proper angle to doff front and back bobbins.
D. Lower spindles, reset builder, reset clock.
E. Break ends at pressor.
F. Doff full bobbins to box.
   1. Remove bobbin from spindle with both hands.
   2. Place full bobbin in doff box.
G. Push full doff boxes to storage area.
H. Get a box of empty bobbins and place them on spindles.
   1. Press down and twist bobbins until each bobbin locks into the grooves on the top of the spindle.
I. Straighten ends at pressor.
   1. Wet down ends with a sponge.

ACCOMPLI
SUPERVISO
INITIALS
DATE

J. Tag frame.
   1. Start and stop frame rapidly until several revolutions of stock turn onto the bobbin.
K. Wrap stock ends.
L. Put end in production.
   1. Thread sliver over creel rolls and into the trumpet behind the front rolls.
   2. Tag the frame to allow roving to turn through the rolls.
   3. Place plastic flyer threader through flyer from the bottom and hook end to the threader and pull end through flyer.
   4. Thread the pressor and wrap the end around the bobbin.
M. Record clock reading and mark the production cord.
N. Start frame.
O. Complete I. D. tag, and place in bobbin.

DIVISION COMPLETED

II. Cleaning per doff

A. Raise and brush top cleaners and sower cleaners.
B. Brush head and boat ends.
C. Use air hose to blow off the rolls and top flyers.
   1. Blow flyers at pressor and spindle base.
D. Clean pneumafil tank and deposit waste.

DIVISION COMPLETED

III. Creeling and cleaning per creel

A. Break out cans.
   1. Break sliver and push cans to spare floor behind the frame.
B. Brush and clean lifting rollers and posts.
C. Clean roller beam back, apron brackets and pneumafill pipes.
D. Place waste in proper can.
E. Move cans into creel splice ends.
   1. Place full cans of sliver two at a time into proper position.
   2. Splice the hanging end and the end from each can together by hand.

DIVISION COMPLETED

IV. Turn cans

A. Line up turn cans.
   1. Splice ends of sliver in each can together.
   2. Accumulate sliver into one can until the can is full.

DIVISION COMPLETED

DATE

V. Cleaning per shift

A. Get roll picker and brushes.
   1. Stop frame.
   2. Pick all waste and lint accumulation from top rolls and from bottom steel rolls.
B. Inspect and clean apron tension rolls.
C. Get rugs, wipe flyers, spindle housing.
D. Clean head and foot ends.
E. Clean back covers and sompsons, motor base.

DIVISION COMPLETED

VI. Repair breaks

A. Repair ends down below front roll.
B. Repair collier, steel roll and apron.
C. Repair slack end.
   1. Stop frame and turn bobbin on spindle until all slsck is removed.
D. Repair creel break, piece end or splice.

DIVISION COMPLETED

VII. Creel front roll choke.

A. Cut the sliver from around the roll and place the end in the back of the roll.
   1. Then piece up end.

DIVISION COMPLETED

VIII. Choked flyers.

A. Break end at the front roll.
   1. Roll end between palsm to establish twist.
   2. Grasp end at pressor and pull down through flyer to remove choke from flyer leg.
   3. Piece up end.

DIVISION COMPLETED

IX. Take end out of production

A. Grasp flyer at broken end.
B. Position flyers, remove bobbin from spindle. and place an empty bobbin on spindle.
C. Place part-full bobbin in a doff box.
D. Place a empty bobbin on the spindle.
E. Reach behind the front rolls and break sliver.
F. Run sliver in rolls through rolls.
   1. Place this waste in proper waste container.
G. Pull sliver from that end back across rolls and into can.
H. Start frame.

DIVISION COMPLETED

WEAVING PROCESS

The first department in the production of woven material is the throwing department. The major purpose of the throwing department is to import additional twist to continuous filament rayon yarn. The yarn is also packaged in the throwing room for use as warp or filling in weaving.

There are several sub-departments within the throwing department. The purpose of the soaking and drying yarns is to make it possible to identify yarns by applying removeable tints in the soaking process.

In the winding process, the yarn is wound from skeins, cones or cakes onto special spools in order that it may be handled on the twisting or spinning frames. This is merely a transfer from one type of package to another.

The twisting (or spinning) process puts a certain predertermined number of turns into the yarn. The S-B twisting machine is used for the production of combination yarns involving the doubling or plying of regular, acetate or viscase of normal twist with viscase crepe yarns to obtain special fancy effect yarns. The twist is set in the yarn by the use of a "steam box" where the dry and wet temperature and the relative humidity are predetermined and controlled. The yarn is steamed for about two hours. Without this process, the yarn would have a tendency

to kink and unravel.

The yarn goes from the steam box where it has been conditioned to the redrawing area where it is transferred to the steaming bobbin to lighter shipping spools to be used in some other department within the mill as shipped to some other plant. Redrawing is not always necessary as steaming bobbins are sometimes transferred direct to warp mills or to the quilling department where the yarn is wound directly from the steaming bobbin.

The next over all department is called the preparatory department. The preparatory department is made up of several sub-departments known as warping, slashing, beaming, quilling, and entering.

Warping is the transfer of yarns from spools or cones into a continuous wide sheet of yarn (warps) in which individual threads or "ends" are spread equally apart and parallel to each other on an oversize spool 50" to 65" long and known as a section beam. The warping department is made up of two types of warping known as spool warping and high-speed warping. Usually spool warping is used for warping combination yarns which do not have to be slashed or sized; whereas, high-speed warping is used where yarns have to be slashed and sized before weaving.

The warps go from the warping department to the slashing department where the warp must be slashed or sized. There are several reasons for warp sizing some of them are listed on the following page.

A. To provide an efficient film for yarn filaments, reducing chafing in the looms.

B. To increase the strength of the yarn insofar as this is required to prevent breakage in the loom.

C. To equalize any differences in tension of the warp yarns by a moderate stretch to produce a smooth uniform sheet of warp yarn to prevent loose ends.

D. To afford proper "feed" to the finished cloth by the use of various chemicals in the size solution.

E. To render the warp yarns more resistant to atmospheric changes during weaving.

With the slashing operation, the total ends required in the warp are transferred from the section beams, to the loom beam. One of the most important factors in rayon warp sizing is the amount of stretch that is applied to the yarn. This must be controlled in order to produce good weaving results and to give the desired finished cloth appearance.

After slashing the warps are taken to the entering department where each individual end is drawn through a separate drop wire, heddle eye, and then through a dent in the reed. This process of threading individual ends through these items is called "drawing in". A draw set of harness frames, heddles, and reed can be run several times in a loom before having to be redrawn or rethreaded again. This is done by typing the new warp to be run to the old ends. The new warp then is ready to be remounted

in the loom.

The next step is called quilling. Several terms are employed in speaking of this particular process; they are "copping", "quilling", or "filling winding". This process is the transfer of yarn from a supply package onto a paper or wooden quill. The quill is filled with the desired amount of yarn by a so called "filling winder" or "winding" machine. The temperature and humidity conditions must be regulated and controlled to prevent stretched yarn during filling winding. After quilling, the quills or yarn are steamed in a steam chest, to set the twist. They are then ready to be carried to the weaver room.

Weaving is the process of interlacing two sets of yarns, one running lengthwise in the loom termed "warp" and the other running cross-wise in the loom and called "filling", interlacing each other at right angles. The weaving machine is known as the "loom". The loom consists of eight principal mechanical motions. They are:

A. Shedding harness and head motion

B. Picking motion

C. Beating up motion

D. Set-off motion

E. Take-up motion

F. Filling bobbin replenishing motion

G. Automatic stop motions

H. Box motion

The harness and head motion control the design of the cloth by lifting and lowering individual harness frames.

The cloth is doffed from the looms in rolls of approximately 100 yards and carried to the cloth room.

In the cloth department the cloth is run through what is known as a "shearing machine" to shear off any loose ends on the edges, or other parts of the cloth. The cloth is then run through the grading frames, under flourescent lights, or in front of large, frosted windows in order that the cloth graders can check for weaving defects, dirt, and other evidence of inferior merchandise. If defects are found they are referred back to the weave room in order that the looms, producing bad cloth can be checked and causes corrected. After grading, the cloth is ready for packing and shipping to various finishing plants.[4]

Total Training Time; Half-Time Basis -- 28 Weeks

Effective Date _____

INDUSTRIAL COOPERATIVE PROGRAMS

TRAINEE: _____ BIRTH DATE: _____

SCHOOL: Granite Falls High School COORDINATOR: Mike Holt

TRAINING STATION: _____

ADDRESS: _____ TELEPHONE: _____

OCCUPATIONAL TRAINER: _____

EMPLOYMENT OBJECTIVE: Clerk Dept. No. 2 (Detail Clerk)

D.O.T. CODE NUMBER _____

LENGTH OF ACCREDITED TRAINING (1) (2) Years

REFERENCES Training manuals from Burlington Ind. and Shuford Mills

PRIMARY FUNCTIONS: Order and insure delivery of all filling yarn for weave room. Print piece tickets for all styles.

MACHINES, TOOLS, AND EQUIPMENT USED: Addressograph machine, Graphotype machine, clipboard table, pencil, strapping, strapping tools.

Upon completion of each division the supervisor will initial and give the date of completion.

ACCOMPLISHMENT
SUPERVISOR'S
INITIALS
DATE

DIVISION AND JOBS

I. Clerical work

A. Order filling yarn and check case numbers when delivered by warehouse man.
B. Get data sheets from planning for style changes. Get information for running piece tickets from planning and cost accounting.
C. Make plate with Graphotype machine for piece tickets.
D. Run tickets on addressograph machine for all warp cuts, and run piece tickets for any looms that are changed.
E. Keep piece tickets for running on looms.
F. Maintain supply of loom stop cards on all looms.
G. Hang all piece tickets on loom that are not ready for supervisors.
H. Hang all re-run tickets.
I. Verify all piece tickets.
J. Repack all lots in filling storage area that are not currently being utilized.

ACCOMPLISHED SUPERVISOR'S INITIALS DATE

K. Record daily warp fall on daily loom mounting schedule.
L. Conduct pattern check weekly
M. Strap waste cardboard boxes on platform, weigh, fill out proper forms and take to storage.
N. Take warp tickets to planning (daily)
O. At any filling change, order proper filling and coordinate with warp fall.
P. Notify I.E. Department of any change in filling weight or package type.
Q. Inspect yarn of special lots, cull and repack bad yarn.
R. Keep filling area in order.
S. Do other duties as directed by supervisor.

DIVISION COMPLETED

Total Training Time; Half-Time Basis -- 36 Weeks

QUESTIONS AND ANSWERS OFTEN ASKED ABOUT TEXTILE MANUFACTURING

1. What does the word "textile" mean?
   Answer: Any woven material

2. What does the word "woven" mean?
   Answer: Cloth made by crossing threads

3. Approximately how many people work in the textile industry?
   Answer: 900,000

4. In how many states are textile plants located?
   Answer: 42

5. Name five ways in which textiles are used in everyday products.
   Answer: Bed sheets, blankets, towels, rugs, curtains

6. What happens to cotton in a gin?
   Answer: The seeds and linters are removed.

7. About how many pounds of cotton are in a bale?
   Answer: 500

8. How are man-made fibers created? What materials are used?
   Answer: Chemically; Wood pulp and oil

9. Where does cotton start its trip through a mill?
   Answer: Opening room

10. What is the function of a "carding" machine?
    Answer: To align all the fibers in the same direction

11. What is a "sliver"?
    Answer: A rope like strand of fiber about the size of your finger made by the card machine.

12. What is "drawing" in a cotton mill?
    Answer: The straightening and stretching of sliver

13. What is the function of a "roving frame"?
    Answer: Straightens and stretches the drawing sliver which is reduced in size and a slight twist is added.

14. What is done to cotton on a "spinning frame"?
    Answer: The sliver is stretched into a thin yarn and the yarn is twisted to add strength.

15. Why is yarn dipped into boiling starch before it is woven?

Answer: To keep it from breaking when it is woven.

16. What is the thread pattern in plain weaving?
Answer: The crosswise yarns pass over and under the length wise yarn

17. For what is knitted cloth used?
Answer: Hosiery, underwear, sweaters, shirts, and women's suits

18. How does knitting differ from weaving?
Answer: One yarn can form the entire fabric

19. Name three ways textiles can be dyed or colored.
Answer: (1) The fiber can be dyed before it is spun into a yarn. (2) The spun yarn can be dipped into big vats containing coloring material. (3) The fabric can be colored after it is woven or knitted.

20. Name the three basic weave patterns.
Answer: Plain, twill, and satin

21. How has science helped America's textile industry?
Answer: By developing new processes and better ways of making cloth and developing new fibers

22. What effect does a twill weave give?
Answer: Effect of diagonal lines

23. Which of three basic weave patterns produces a smooth surface?
Answer: Satin

24. What is the role of education in the growth of the textile industry?

25. Approximately how many plants turn out cotton, man-made fiber and silk textile products in the United States?
Answer: 7,500

26. How many Americans directly or indirectly derive their living from the textile industry?
Answer: 15,000,000

27. How many yards of fabric are produced each year?
Answer: 15 billion square yards

28. Explain the function of an opening machine.
Answer: Fluffs up the fiber and removes foreign material

29. How are fibers blended?
Answer: By placing two or more fibers into an opening or blending machine

30. Explain the difference between "warp" and filling yarn.
Answer: Warp yarn is the lengthwise threads in cloth. Filling yarn is the cross wise threads in cloth.

31. Explain the function of a "slasher".
Answer: Yarn from several beams are combined and treated with a hot solution of starch, wax, oils, and water to coat and strengthen the yarn.

32. Explain two ways man-made fibers can be introduced into textile manufacturing.
Answer: (1) Filament, or continuous fiber. (2) Staple cut into lengths suitable for being spun into yarn or blended with cotton or other fibers.

33. What other industries are affected by textiles?
Answer: Almost every industry in the United States

34. Explain the operating principle of the Jacquard loom.
The pattern is imposed on cardboard by means of perforations, the loom mechanism manipulates the warp threads raising or lowering then according to the design.

35. Name three types of looms that are in use.
Answer: Box loom, shuttleless loom, and Jacquard loom

36. What is the first step in finishing?
Answer: Bleaching

37. Explain: (a) printing; (b) package dyeing: (3) color computer.
Answer: (a) Printing is placing designs on cloth; (b) Package dyeing means large numbers of "packages" of yarn are put on a carrier or frame and placed in a dye Machine; (c) Color computer provides quick accurate identification of color.

38. Which is the oldest of the man-made fibers?
Answer: Rayon

39. Name at least five universities or colleges which have special textile schools.
Answer: N. C. State, Auburn University, Clemson University, Massachusetts Institute of Technology, and Philadelphia College of Textiles and Science

40. What early state legislature voted funds to stimulate textile manufacturing?
Answer: Massachusetts

41. Who was the builder of America's first textile machinery?
Answer: Col. Hugh Orr

42. Name and locate three of the earliest attempts to establish textile manufacturing as an American industry.
Answer: Charleston, S. C.; Statesbury, S. C.; and Beverly, Mass.

43. Who is regarded as the "father" of America's textile industry?
Answer: Samuel Slater

44. Where was the first successful cotton mill in America?
Answer: Pawtucket, R. I.

45. Name the inventor of the cotton gin and explain the effect of this invention on the cotton industry.
Answer: Eli Whitney; the cotton gin greatly increased the demand for raw cotton. It also made textile products cheaper so more people could afford them.

46. Who was the builder of America's first power loom?
Answer: Francis C. Lowell

47. When and where was the world's first complete power-operated textile plant?
Answer: Waltham, Massachusetts, 1814

48. Where are the oldest cotton mills owned and operated by the same families?
Answer: Philadelphia

49. What was the machine copied by William Mowry?
Answer: Double speeder

50. What was James Thorpe's invention and why was it important?
Answer: Ring spinning made spinning faster, simpler and less expensive

51. Who was the South's pioneer in large-scale textile manufacturing?
Answer: William Gregg

52. Why was the International Cotton Exposition of 1881 so important?
Answer: It stimulated the growth of the textile industry in the South.

53. When and where was an electric motor drive first used in a cotton mill?
Answer: Columbia, South Carolina, 1893

54. What did James Northrop invent?
Answer: Automatic loom

55. What is "picking" in a cotton mill?
Answer: Opening and cleaning of raw cotton

56. Explain the educational methods used to open new opportunities in the textile industry. Many
Answer: Many mills provide scholarships for deserving students in textiles. Technical schools receive financial assistance from textile mills.

57. What is the importance of research to textile manufacturing?
Answer: Research is necessary in order to better textile products to be products to be produced.

58. What is unusual and unique about the Institute of Textile Technology?
Answer: It is the only post graduate institution in the country existing independently of any college or university.

59. Where is the center of the textile industry's marketing activities?
Answer: New York[5]

TERMS AND DEFINITIONS - SPINNING

ALLEY - The area between the machines.

BACK WINDING - The act of winding yarn from one package to another.

BLEND - To mix different kinds of grades of cotton or rayon fibers to produce yarn posessing characteristics that could not be obtained from any one of the fibers if used alone.

BLENDING MACHINE - A group of devices that are synchronized to proportion definite amounts of various grades of fiber which are to be blended together.

BOARD - A board with 48 holes in it into which are inserted the end of a finished quill to hold the quills upright. Quillers are often paid by the number of boards completed.

BOBBIN - A small, wooden or metal core on which yarn is wound.

BOBBIN CLEANER - A machine that removes any remaining yarn or roving from bobbins (quills) after they have been used in the looms, spinning machines or winders.

BREAKER LAP - A roll of loosely matted cotton fibers formed on the breaker picker from tufts of opened cotton.

BREAKER PICKER - The first of the two units of older style picker machines. In this unit the raw cotton or rayon is partially cleaned by beating and fluffing and then fed into a finisher picker.

BREAKING AND OPENING MACHINE - A line of machines, working as a unit, that tear apart and partially clean matted baled fibers.

BROKEN END - A thread of strand or roving which has broken in a textile machine.

CALENDER ROLLS - A unit on the sliver lapper, ribbon lapper, combing machine, drawing frame or card which presses the lap or sliver, as it comes from the drawing rollers, into a loosely matted layer.

CAN - A large cylindrical container for receiving and holding lengths of sliver delivered from the front of a carding machine, drawing frame, or combing machine.

CARD CLOTHING - Special cloth studded with wire teeth, which serves to open up the cotton fibers and clean them of impurities

CARD FLAT - A metal slat covered with card clothing which aids in opening the cotton fibers in connection with the cylinder. The slats are joined together to form an endless belt that is placed so that it revolves over and above the card cylinder. Following the contour of the cylinder, it passes very closely (7/1000 of an inch) to the card clothing and helps to remove the small particles of dirt, short fibers, or knotted fibers.

CARD GRINDING - The periodic sharpening of the wire teeth of the card clothing with an abrasive cylinder.

CARD SLIVER - A thick, untwisted rope of cotton fibers, uniform in thickness and relatively free from neps, which represents the finished product of the carding machine.

CARD STRIPPING - The act of removing adhering cotton fibers from the wire teeth of the carding machine with a small wire tooth-clad roller.

CARDING - The process of separating and cleaning cotton fibers to prepare them for spinning.

CARDING DRUM - The large, rapidly revolving cylinder of the carding machine, covered with several million wire teeth, that picks up (pulls out) the cotton fibers and, working in conjunction with other rollers or flats, combs the fibers and removes small particles of dirt and knotted fibers.

CARDING MACHINE - A machine which completes the cleaning of the cotton, arranges the fibers so they are not matted and transforms the cotton from lap into sliver.

CHEESE - A roll of yarn built up on a paper or wooden tube in a form that resembles a bulk cheese.

COILING HEAD - A device at the front of carding machines, drawing frames, and combing machines that deposits the sliver in even coiled layers in tall cylindrical cans.

COMBING - The process of extracting fibers below a predetermined length and neps from cotton sliver and straightening the remaining fibers to make tham parallel.

COMBING SLIVER - The loose, untwisted strand of cotton fibers produced by the combing machines from ribbon lap.

COMBING MACHINE - A machine which prepares fibers for spinning into yarn by removing short fibers, dirt, and neps, and straightening the remaining fibers into parallel alignment.

CONE - (1) a tapered cylinder of wood, metal, or cardboard around which yarn is wound. (2) a package of yarn wound onto one of the above.

COTTON YARN MEASURES - 54 inches equals 1 thread (circumference of warp reel); 80 thread equals 1 skein or lea - 120 yards; 7 skeins equals 1 hank equals 840 yards.

CREEL - (1) The rack for holding packages of roving or yarn on any textile machine. (2) The task of mounting packages of roving or yarn on the rack (creel) of any textile machine.

DOFF - To remove a filled package or beam from a textile machine. Frequently the operation includes replacing the full package or beam with an empty one.

DOFFING COMB - An oscillating, notched steel bar, set adjacent to the doffing cylinder of a carding machine, which strips the cotton from the doffing cylinder in a light film or sheet.

DOFFING CYLINDER - A wire-tooth-covered drum on a carding machine that strips the cotton in a light film from the carding drum and which is stripped in turn by the doffing comb.

DOUBLING - The process of combining two or more strands of roving, sliver or yarn. The purpose of this operation is to increase the uniformity of the strand and, ultimately, of the yarn made from it.

DRAFT - To draw out (attenuate or stretch) a strand of fibers usually by running the strand between several pairs of rollers, each pair turning faster than the pair before it.

DRAW OUT - To stretch or attenuate a strand of fibers usually by running the strand between several pairs of rollers, each pair turning faster than the pair before it.

DRAWING SLIVER - The loose, untwisted strand of fibers which is the product of the drawing frames.

DRAWING FRAME - A machine in which several strands of sliver are combined into one strand, the fibers drawn parallel and further drawn out so that the combined strands approximate the weight and size of any one of the original strands.

DRAWING ROLL CLEANER - A pad of felt or similar material, attached to the top and bottom of the cleaner box cover, which serves to wipe away the dust and lint that collects on the drawing rollers as they draw out the roving sliver.

DRAWING ROLLERS - Two or more pairs of rollers, each pair of which rotates at a higher speed than the preceding pair, serving to draw out or attenuate and parallel the roving or sliver passing between them.

END - (1) An individual warp yarn. (2) One strand of sliver, roving or yarn. (3) First or last part of a woven piece of cloth.

FEED ROLL - A roll which feeds the material (stock, fiber, roving) into the machine to be processed.

FIBERS - The hairlike filaments of any textile substance, such as the fibers of cotton, rayon, nylon or the individual hairs of wool.

FINISHER PICKER - The second of the two units of older style picker machines. This unit receives partially cleaned fibers in the form of lap from a breaker picker and continues the cleaning and fluffing process.

FLAT - A flat piece of material covered with a special type of card clothing, held in a horizontal position on the "flat top" type of carding machine. Working in conjunction with a carding drum, it aids in opening the cotton fibers.

FLY FRAME - One of several machines that progressively combines two strands of partially processed roving into one, draws out the combined strands until they are of prescribed weight, and twists them loosely to give them sufficient strength to withstand subsequent operations.

FLYER - A hollow, U-shaped rotor, mounted with the openside down on top of the spindle of a fly frame. It is rotated by the spindle and serves to twist the roving and wind it on bobbins.

FORKS - A metal device with finger-like guides between each of which one strand of sliver passes to the rolls.

FORMING TRUMPET - (1) A short, flared, metal tube used to condense a web into a strand of fibers. The film of fibers from the machine is passed through the tube which forms them into a sliver. (2) A similar device at the front of a warping machine. It is used for gathering a number of strands of yarn into a loose, untwisted rope when ball warping.

GIN - Machine used to remove seeds and to clean dirt from cotton as it comes from the field.

GRINDING ROLL - A device used to sharpen the wire teeth on the cylinders and flats of carding machines.

HANK - A measure of yarn varying for different materials; the cotton hank is 840 yards.

HUMIDIFIER - A device that vaporizes water and sprays it into the atmosphere in order to control the amount of moisture in the air.

HARD END - An end of roving which was lapped or twisted too hard in piecing it up in the carding department.

KNOTTER - An automatic device for tying knots in yarn at various stages of manufacture.

LAP - A general term used to designate wide sheets of loosely matted fibers formed on such textile machines as the breaker picker, finisher picker, ribbon lapper, and sliver lapper.

LAP STICK - A small metal rod, around which the wide sheet of cotton lap is wound as it emerges from a textile machine.

LICKER-IN - A roller, covered with coarse wire teeth, that is located in the carding machine in such a position as to gradually draw in the cotton from the feed rollers, partially open it, and pass it forward to the carding drum.

LIVE SPINDLE - A power-driven shaft that supports and rotates a bobbin on which twisted yarn is wound.

MULE SPINNER - A machine that spins many strands of loosely twisted roving into many strands of yarn. Now considered an obsolete machine.

NEPS - Short, immature fibers, or portions of mature fibers which are tangled and broken.

OPENING PICKER - Machines that tear apart and partially clean matted baled fibers.

PACKAGE - A general term for any wound arrangement of yarn, such as a cheese or cone.

PICKER MACHINE - A machine which cleans, separates, and fluffs raw cotton, forms the cotton into a uniform layer, and winds it into a roll about a core.

PIECING UP - The operation of piecing together broken strands of yarn, sliver, or roving.

REWINDING - The act of winding yarn from one package to another.

RIBBON LAP - The roll of closely matted cotton fibers, about 10 inches wide, formed on the ribbon lapper from several sliver laps.

RIBBON LAPPER - A machine which draws and combines several rolls of lap from a sliver lapper into one roll of ribbon lap ready for feeding to a combing machine, straightening the fibers slightly and making the lap more uniform in weight and texture.

RING RAIL - A rail, extending the length of the ring spinning machine or twister, which by a properly timed up-and down motion, builds the yarn onto bobbins in even layers.

RING SPINNING MACHINE - A machine which transforms one or more strands of slightly twisted roving into one strand of spun yarn.

RING TRAVELER - A small, metal weight on a ring spinning machine, that is arranged to spin freely on a circular track around the bobbin at a rate slightly slower than the bobbin rotates, in order to impart twist to and guide the yarn onto the bobbin.

ROLLS - Spinning rolls consist of two sets of rolls - one, a set of power-driven steel rolls which accepts the roving from the roving guides, draws it out and sends the drawn out strands to the spindles at a constant rate. The second set or top rolls are leather covered rolls which rest upon the steel set and, by being weighted, create sufficient friction upon the roving to keep it moving evenly over the steel rolls.

ROVING SKEWER - A wooden peg or spindle on which bobbins of roving are held in the creel.

SINGLE-PROCESS PICKER - A machine which cleans, separates, and fluffs raw cotton, forms the cotton into a uniform layer, and winds it into a roll about a core.

SLIVER - The loose, untwisted strand of cotton fibers produced on the carding machine, drawing frame, and combing machine.

SLIVER CAN - A large cylindrical container for receiving and holding lengths of sliver delivered from the front of a carding machine, drawing frame, or combing machine.

SLIVER LAP - A general term used to designate wide sheets of loosely matted fibers formed on such textile machines as the breaker picker, finisher picker, ribbon lapper, and sliver lapper.

SLIVER LAPPER - A machine which draws and combines several strands of sliver into a sheet of lap and winds it on a spool ready for ribbon lapping or combing.

SLUB - A thick place in a strand of yarn caused by improper spinning.

SLUBBER - A machine which draws out strands of sliver and twists them together loosely in order to give the strands (now roving) sufficient strength to withstand subsequent operations.

SLUBBING - The process of drawing out and loosely twisting sliver to make roving.

SNARL - A tangle of yarn.

SPINDLE - A metal rod or wooden stick for holding spools, cheeses, or bobbins on such machines as spinning frames, warping machines, and winders.

SPINNING BOBBIN - A bobbin or quill used on the spinning frame to hold the spun yarn.

SPINNING - The process of making yarn from fibers by drawing out and twisting the fibers into a thin strand.

SPLICE ENDS - A term used to designate the method of joining two ends of sliver or ply yarn to make a single end.

SPOOL - A flanged cylinder, usually of wood, upon which yarn is wound.

SPOON - A device between forks and the rolls which guides the sliver to the rolls and which stops the entire frame if one strand of sliver runs out, if an end comes down, or if an end breaks.

SPUN RAYON - General term applying to yarns and fabrics made wholly or principally of rayon staple fiber.

SPUN RAYON YARN - A continuous strand of yarn manufactured of rayon staple fiber or rayon waste and held together by a twist produced by textile spinning.

STAPLE - Term to denote average length of a fiber. (1) Any kind of textile fiber; term used as an index of quality or fineness as long staple. (2) Any fabric or article sold year after year in contrast to a novelty or seasonal article.

STAPLE FIBER - Filaments cut to required length for the purpose of spinning alone, or mixed with other types of fibers, or natural fibers of more than average length.

STOP MOTION DEVICE - An automatic device that is designed to stop a textile machine on the occurrence of such events as a thread breaking or the spindle bobbins becoming full.

TENSILE TESTING MACHINE - A machine for measuring the elasticity and strength of yarn.

TRAVERSE - A mechanism which causes the winding mechanism to travel between determined distances in order to accomplish an even winding motion.

TUBE - A piece of rolled paper or cardboard of suitable dimensions upon which yarn or fabric is wound.

TWIST - The number of turns per inch in a thread, yarn or roving. "S" is right twist and "Z" is left twist.

TWISTING MACHINE - A machine which twists two or more strands of yarn into a heavier, stronger, single strand.

WARPING - (1) Consists in assembling yarns according to number and color, or in any special manner that may be required, and keeping them in their relative position after they have been so arranged. (2) Preparation of a warp for the loom.

WASTE MACHINE - A machine which beats, pulls apart, and fluffs up waste to prepare it for re-use.

WINDER - A machine which simultaneously winds yarn from many spinner bobbins onto many cheeses, cones, or filling bobbins.

WINDING REEL - A cylinder of known circumference about which yarn can be wound for measuring purposes.

YARN - A continuous strand of fibers used for weaving or knitting.[6]

TERMS AND DEFINITIONS - WEAVING

ACETATE RAYON - Fiber, yarn, or material made by the acetate process. It is the fourth method (historically) of making rayon, differing from the other three in that the product is not reconverted cellulose but an ester of cellulose, i.e., cellulose-acetate.

BACK - The underside of the cloth as woven in the loom.

BACK BEAM - The bar, at front of the loom, that guides the woven cloth onto the cloth roll.

BACK WINDING - The act of winding yarn from one package to another.

BATTEN - To align strands of filling yarn and push them up close together as they are woven. The reed accomplishes this by advancing and receding from the cloth after each passage of the shuttle driving each pick against the fell of cloth already woven.

BATTERY - A magazine on the loom that holds the full quills, cops, or bobbins of filling yarn, and from which they are inserted into the shuttle by an automatic changing device.

BEAM - A large spool or roll on which warp yarn is wound.

BEAM WARPING - The transferring of yarn from bobbins, cheeses, or cones onto a warp or section beam in the form of a wide sheet. Yarn from several of these beams is run through the beaming machine to make one loom beam.

BEAMING MACHINE - A machine that winds yarn from several section beams onto one loom beam.

BEAT UP - To align strands of filling yarn and push them up close together as they are woven. The reed accomplishes this by advancing and receding from the cloth after each passage of the shuttle driving each pick against the fell of cloth already woven.

BOBBIN - A small wooden or paper core on which yarn is wound.

BOBBIN CLEANER - A machine that removes any remaining yarn from bobbins (quills) after they have been used in the looms.

BOLT OF CLOTH - A rolled length of cloth.

BOX LOOM - Required for weaving cloth goods containing two or more filling colors or twists as (1) Fabrics made with S and Z twists in filling, as "box loom crepe"; (2) Fabrics made with different filling, as in gingham, necessitate a box loom.

BOX TRUCK - A box mounted on wheels and used for hauling such articles as bobbins and spools from one department of a mill to another.

BREAST BEAM - The bar, at front of the loom, that guides the woven cloth onto the cloth roll.

BROKEN END - A thread or strand of yarn which has broken in a textile machine.

BROKEN PICK - A defect due to filling yarn breaking, thus leaving a part of the pick out of the cloth.

CAKE - Rayon filaments piled into a cake shape by the centrifugal spinning box.

CARD - A unit of a pattern chain used on a Jacquard loom. It is a cardboard strip with holes (similar to those in a player piano roll) punched in it which serve to control the action of the weaving mechanism. It is joined, by lacing to other cardboard strips to make a pattern chain.

CARD CUTTING - The act of punching holes in Jacquard cards according to a pattern of design draft, so that when they are set up in the loom, they will control the weaving mechanism and the pattern will be woven into the cloth.

CARD CYLINDER - (1) That part of a Jacquard loom which holds the pattern cards in position while plungers which control the weaving of patterns, pass through the holes in the cards.

CARD CYLINDER LACING MACHINE - A machine which laces together in a pattern chain the perforated cards that control the operation of a Jacquard loom in weaving designs and patterns in cloth.

CARD PUNCHING MACHINE - A machine which perforates the cards that are used in Jacquard looms to control the weaving of designs and patterns in the cloth.

CASTING OUT - The act of rigging some of the pattern controlling hooks of a Jacquard loom so that they will not act, when the pattern to be woven does not require the action of all the hooks.

CHEESE - A rool of yarn built up on a paper or wooden tube in a form that resembles a bulk of cheese.

CLOSED SHED - That shed in which some of the warp yarns are crossed over others. The distinction between closed shed and open shed arises only in weaving cross-thread tissues, such as gause and leno weave.

CLOTH ROLL - Small wooden roll on which cloth is wound as it comes off the loom or shearing machine.

COMB - A series of upright metal pegs which separate the individual warp strands and guide them onto a beam in proper order.

COMBINATION YARN - A yarn of standard twist is plied with a crepe yarn to make a combination twist. Many varieties exist, which are used in alpacas, moosy crepes, romaines, etc.

CONDITIONING - The act of exposing bobbins of filling yarn to steam or to a spray of conditioning solution in order to set the twist, and to prevent its kinking in subsequent processes.

CONE - A tapered cylinder of wood, metal, or cardboard around which yarn is wound.

COP - A tapered package (paper or wood) on which yarn is wound, ready for the shuttle. Used on a copping or quilling machine.

COPPING - (Quilling) The operation of winding yarn on a cop or quill.

COP WINDING MACHINE - A machine which winds yarn onto a cop or quill.

COTTON LINTERS - The short, fine fibers which cling to the cotton seed after the lint has been removed.

COTTON YARN MEASURES - 54 inches -- 1 thread (circumference of warp reel); 80 thread -- 1 lea -- 120 yards; 7 leas -- 1 hank -- 840 yards; 1 bundle -- 10 pounds (usually).

COUNT - (1) The number of picks and warp ends per inch in cloth. (2) A number assigned to yarn to describe its finishes. The number is based upon number of hanks per pound of yarn.

CREEL - (1) The rack for holding packages of roving or yarn on any textile machine. (2) The task of mounting packages of roving or yarn on the rack (creel) on any textile machine.

CREPE CLOTH - (1) A fabric containing highly twisted yarns. (2) Crepe means to shrink, pucker, or crinkle up.

CREPE YARN - A rayon yarn which has 45 to 74 turns or twists per inch either in the single or ply. Used for making crepe fabrics. S and Z twist is used.

CUT - A length of warp required to weave a piece of cloth. Also refers to the length of a piece of woven cloth.

CUT-MARK - A mark put upon a set of warp threads before they are placed on the warp beam or a loom, to mark off a certain definite length. The mark shows in a woven fabric and serves as a measure for cutting the pieces at the loom.

DENIER - The unit of weight expressing the number of size of filament yarns. A one-denier filament is of such a size that 9,000 meters weigh one gram.

DENT - The space between two wires in a comb or reed through which a warp strand passes.

DESIGN DRAFT - A diagram showing the pattern that is to be woven into a cloth and also the basic weave (plain, twill, or satin) of the cloth to be produced.

DESIGN PAPER - Cross section paper on which design drafts are made.

DOBBY - (1) Loom on which small figure weaves may be produced. (2) Part of a loom (motion) controlling the harness and consequently making it possible to produce different weaves in fabric.

DOFF - To remove a filled package or beam from a textile machine. Frequently the operation includes replacing the full package or beam with an empty one.

DOUBLING (1) The process of combining two or more strands of roving or sliver and drawing out the resulting strand. The purpose of this operation is to increase the uniformity of the cotton strand and, ultimately of the yarn made from it. (2) The act of winding two or more strands of yarn onto one package without twisting them.

DOUBLING MACHINE - A machine which folds cloth to half or quarter of its original width.

DOUP - A special kind of heddle, used in conjunction with ordinary heddles on the harnesses of a loom to cross and uncross warp filaments (in both a horizontal and vertical plane) when weaving cross-thread tissues, such as gauze weave or leno weave.

DRAWING IN - The process of threading the warp filaments from a beam through the heddles and reed of a loom in the order indicated on a design draft.

DRAWING-IN FRAME - A frame for holding a beam of warp strands, harnesses, and reeds so that the strands may be drawn easily through the harnesses and reeds in a specified order.

DRAWING-IN HOOK - A tool similar to a crochet hook, used to draw the individual warp filaments through the heddles and reed of a loom.

DRESSING - (1) Consists in assembling rayon or cotton yarns according to number and color, or in any special manner that may be required, and keeping them in their relative position after they have been so arranged. (2) Preparation of a warp for the loom.

DROP WIRE - A flat piece of metal with a hole in it through which warp yarn is passed. It drops and stops the machine when the yarn threaded through it breaks.

ENDS DOWN - A condition in which one or more ends have broken in a textile machine.

EYELET PLATE - A cross bar attached to the end of a creel immediately in front of each row of spindles. It is perforated with the same number of holes as there are spindles in the row and serves to guide the individual ends from the package on the spindles to the warping machine.

FELL - The last picks that have been woven in the cloth by the shuttle.

FIBERS - The hairlike filaments of any textile substance, such as the fibers of cotton, rayon, or the individual fibers of wool.

FILAMENT - The continuous, individual strand of raw yarn, acetate, or rayon, which comes from a spinnerette. Rayon yarns have 15 - 100 filaments or units.

FILLING - Yarns single or in combination for the shuttle. Each crosswise yarn in a piece of cloth is called a filling pick. Also refers to the finishing of cotton goods with starch.

FILLING BIN - A shelved compartment in which the filling yarn of various sizes, colors, and quality is stored until requisitioned.

FILLING BOBBIN - A tapered core on which filling yarn is wound for use in the shuttle.

FINISHING - Series of processes to which rayon goods are subjected to make them wearable, suitable and marketable for specific purposes.

FOLDING MACHINE - A machine which folds cloth into yarn length of folds for bailing.

GREIGE GOODS - Term designating rayon cloths just off the loom and in unfinished state.

HANK - A measure of yarn varying for different materials; the cotton hank is 840 yards.

HARNESS - An assemblage of heddles mounted on a harness frame that moves them all together. A separate harness is used for each group of warp ends that must be moved independently to weave a desired pattern.

HARNESS FRAME - A wooden or metal frame from which is suspended a series of cords or wires called heddles. Each heddle has a small eye through which the warp end is passed according to a predetermined design. Each harness frame is fastened to a mechanism that raises and lowers it in proper sequence to form the sheds through which the shuttle carries the filling yarn to produce cloth of a specified pattern.

HEDDLE - Flat steel wires which control the opening space (shed) between warp yarns to allow the shuttle to pass through during weaving.

HEDDLE EYE - The opening in the center of the heddle through which the warp threads are drawn.

HOOP CUTTER - A hand tool, resembling a large pair of pliers, which is used to cut the metal ties of cotton bales.

HUMIDIFIER - A device that vaporizes water and sprays it into the atmosphere in order to control the amount of moisture in the air.

INSPECTING MACHINE - A machine which draws cloth over a wide surface for inspection purposes.

INSPECTING TABLE - An inclined table over which cloth to be inspected is drawn by hand.

JACQUARD CARD - A unit of a pattern chain used on a Jacquard loom. It is a cardboard strip with holes (similar to those in a player piano roll) punched in it which serve to control the action of the weaving mechanism. It is joined, by lacing to other cardboard strips to make a pattern chain.

JACQUARD-CARD LACER - A machine which laces together in a pattern chain the perforated cards that control the operation of a Jacquard loom in weaving designs and patterns in cloth.

KNOTTER - An automatic device for tying weavers knots in yarn at various stages of manufacture.

LACING - The operation of uniting a series of Jacquard cards to form the pattern chain that controls the weaving of a Jacquard loom.

LEADER CLOTH - A strip of cloth left threaded through a textile machine to facilitate the starting of a new length through the machines.

LEADER STRINGS - Strands of yarn that are left threaded through the various parts of a textile machine and to which new strands of yarn to be processed are attached. These eliminate the necessity for threading the strands through the machine each time a different lot of yarn is to be processed.

LEASE - In weaving the system of crossing the warp-yarns in a loom between the yarn beam and the heddles, effected by passing each warp yarn alternately over and under two lease-rods.

LEASE ROD - A metal or wooden rod, which is inserted in the lease to prevent the warp yarn from becoming tangled and to facilitate thread selection during the dressing and twisting in.

LETTING OFF - The controlled turning of the loom beam to unwind the warp as weaving progresses.

LINGO - That part of the shedding mechanism sometimes called the weight. It is used for depressing one strand of warp in a Jacquard loom.

LOOM - A machine for weaving warp and filling yarns to produce cloth.

LOOM BEAM - A large spool on which warp is wound. This beam is mounted on a loom for weaving cloth.

LUSTER - (1) The quality of natural glossiness or brilliancy in rayon finished fabric, imparted by finish. (2) Brightness or shine in rayon yarns or staple fiber.

MAGAZINE - A device which holds full bobbins or quills of filling yarn and automatically inserts them, singly, into a shuttle to replace depleted bobbins.

MERCERIZE - Treatment of cotton yarn and goods with strong caustic soda and stretching so as to impart a silk-luke luster, increase strength and affinity of dyestuffs.

METAL PEGS - Small metal pins, about an inch long, which are arranged in the pattern chain of a dobby loom to control the weaving of cloth designs.

MISPICK - An imperfection in the weave caused by a length of filling yarn not being interlaced in its correct place across the warp.

OPEN SHED - The shed in which the warp yarns are uncrossed and parallel. The distinction between open shed and closed shed only arises in a weaving of cross-thread tissues, such as gauze weave or leno weave.

PACKAGE - A general term for any wound arrangement of yarn, such as a cheese or cone.

PATTERN CHAIN - (1) (Dobby Loom) An arrangement of wooden crossbars and metal pegs which is used to control the weaving of cloth designs and patterns. (2) (Jacquard Loom) The sequence of laced-together perforated cards which are used to control the weaving of cloth designs and patterns.

PICK - A single strand of filling yarn carried across and interlaced through the strands of warp yarn.

PICK CLOCK - The automatic counting device attached to a loom which registers the number of filling yarns woven into a piece of cloth.

PICK FINDING - The process of turning back the loom and unweaving the cloth to find a mispick which is to be rectified.

PICKOUT - An imperfection in the weave caused by a length of filling yarn not being interlaced in its correct place across the warp.

PIECING UP - The operation of tying together broken strands of yarn.

PLY - Yarns made of single strands of prepared fibers twisted together.

PORTABLE ENTERING FRAME - A rack for holding a full warp beam while strands of warp yarn are being secured to old warp in a loom.

QUILL - A tapered package (paper or wood) on which yarn is wound, ready for the shuttle. Used on a copping or quilling machine.

RAILWAY SEWING MACHINE - A power sewing machine which is specially devised to sew the ends of cloth lengths together. Located on batcher.

RAYON - (1) The generic name, adopted about 1924, to mean the "filaments made from various solutions of modified cellulose by pressing or drawing the cellulose through an orifice and solidifying it in the form of a filament, or filaments, by means of some precipitating or coagulating medium". (2) Federal Trade Commission definitions: "The generic term for manufactured textile fibers or yarn produced chemically from cellulose or with a cellulose base, and for threads, strands or fabric made therefrom, regardless of whether such fiber or yarn be made under the viscose, acetate, cuprammenium, nitro cellulose, or other process". (3) General: An artificial, man-made material, originating from wood pulp or cotton linters, made into cloth.

RAYON FILAMENT - An individual, thread-like structure of rayon as it comes from one opening of a spinnerette: each rayon filament is usually continuous and, therefore, can be spun to great lengths.

RAYON STAPLE - Rayon fibers of spinable length manufactured directly or by cutting continuous filaments.

RAYON YARN - A group of two or more rayon filaments, laid and twisted together to form a continuous strand for weaving.

REED - A toothed, comb-like part of a loom. Its function is to hold the strands of longitudinal yarn (warp) in alignment between its teeth and also to push each transverse thread (pick) tight against the rest as the cloth is woven.

REED HOOK - A flat, metal tool, similar to a crochet hook, used for drawing the individual strands of yarn through the dents in the reed.

REED MARKS - Marks or lines warpwise of the cloth, usually caused by too many or too few warp yarns being drawn into a dent, a faulty setting of the loom, or imperfections in the reed.

REGAIN - The moisture present in rayon is expressed as the percentage of the moisture-free weight as determined by the A.S.T.M. Method.

REPEATING MACHINE - A machine which automatically duplicates the perforations of a sample Jacquard loom pattern chain in blank cards.

REWINDING - The act of winding yarn from one package to another.

SECONDS - Fabrics woven imperfectly and because of flaws in weave sold as "seconds".

SELVAGE - The edge of woven fabric that is so formed as to prevent raveling. The finish may be different or the same as that of the fabric.

SHEARING MACHINE - A machine which cuts away knots and loose yarn ends from the surface of cloth after it has been woven, to give the cloth a smooth surface.

SHED - The opening made across the warp by the raising of some threads and the depressing of others. It is through this opening that the shuttle passes and lays the cross of filling yarn of a fabric.

SHUTTLE - The device used to carry the cross of filling yarn back and forth through the strands of longitudinal or warp yarn in weaving cloth.

SIZE BOX - A unit of the slashing machine, which contains the sizing solution with which the yarn is prepared.

SIZE MIXER - A large tank equipped with steam coils and a powered paddle, within which sizing is prepared.

SIZING - (1) Process of coating warp ends with a thin layer of binding material, to hold together all loose fibers or filaments and to strengthen the yarn for weaving. (2) Yarns and cloth treated with stiffening substance to give strength, stiffness, or smoothness. Size may contain starch, wax, gelatin gum, paraffin, resins, and antiseptic substances.

SKEIN - A yarn package in the form of a coil made on a reel; used in soaking of rayon yarns.

SLASHING - Treatment of warp threads with starch, gelatin, and other compounds to prepare yarn for weaving operation.

SLEY - The number of warp yarns per inch in a woven cloth in or off the loom.

SLUB - A thick place in a strand of yarn caused by improper spinning.

SMASH - The breakage of a large number of strands of warp yarns while the warp is in the loom.

SNARL - A tangle of yarn.

SOAKING - Process required prior to twisting rayon yarns, for crepe twist. Treating skeins in a lubricant, adhesive and tint solution.

SPINDLE - A metal rod or wooden stick for holding spools, cheeses, or bobbins on such machines as spinner frames, warping machines, and winders.

SPOOL - A flanged cylinder, usually of wood, upon which yarn is wound.

STATIONARY SHED - A method of dividing the warp in which some of the warp strands always remain stationary and the others are pulled up or down to make way for the shuttle.

TAKE-UP ROLLER - A powered shaft, at the front of a textile machine, that rolls up the cloth as it is processed.

TAKE-UP - The action of the take-up roller as it rolls up the cloth when it is processed.

TARE WEIGHT - The weight of the container or wrapping in which goods are purchased. It is deducted from the total (gross) weight to obtain the net weight of a product.

TENSILE TESTING MACHINE - A machine for measuring the elasticity and strength of yarn.

TINTING - Process of coloring with fugituve tints rayon yarns and staple fiber for identification for later operation.

THROWING - Silk term for twisting rayon or silk yarns -- the word means to twist.

TUBE - A piece of rolled paper or cardboard of suitable dimensions upon which cloth is wound after inspection.

TWISTER'S HOOK - A device for holding the ends of strands of warp yarn from the loom and from the warp beam to facilitate the work of the twister in joining them together.

TWO-PLY - (1) Composed of two strands as a cord. (2) Of textile fabrics consisting of two layers woven into one another or on top of one another.

TYING-IN The operation of tying the ends of yarn from the warp beam to the ends of yarn left threaded through a loom.

TYING-IN MACHINE - A machine which automatically ties strands of warp yarn from a fresh beam of warp to those left in a loom from a former beam.

VISCOSE RAYON - The third method (historically) of producing rayon filaments by which about 83% of the world's rayon was produced in 1938. The product by this method is regenerated cellulose, which has been coagulated or solidified from a solution of cellulose exanthate.

WARP - The series of yarns which run lengthwise in a woven fabric; they run parallel to selvage.

WARPING - (1) Consists in assembling rayon or cotton yarns according to number and color, or in any special manner that may be required, and keeping them in their relative position after they have been so arranged. (2) Preparation of a warp for the loom.

WARP BEAM - A large spool or roll on which warp yarn is wound.

WEAVE - The interlacing of warp and filling yarns with each other to form a texture of woven cloth.

WEAVER'S KNOT - A special knot used throughout the textile industry. It can be tied very quickly, does not slip, and is not easily detected.

WEAVING - A mechanical process of interlacing a series of yarns running lengthwise in the loom, i.e., warp, with another series running crosswise, known as filling, at right angles.

WINDER - A machine which simultaneously winds yarn from many spinner bobbins onto many cheeses, cones, or filling bobbins.

WINDING AND MEASURING MACHINE - A device which winds lengths of cloth into rolls and at the same time measures the lengths.

WINDING REEL - A cylinder of known circumference about which yarn can be wound for measuring purposes.

YARN - A continuous strand of spun rayon, cotton, or rayon fibers used for weaving.

YARN NUMBER - (1) The number of picks and warp ends per inch in cloth. (2) A number assigned to yarn to describe its finishes. The number is based upon number of hanks per pound of yarn.

TERMS AND DEFINITIONS - HOSIERY

AFTERWELT - Short section of fabric knitted between the welt and boot sections of the stocking; usually done with the regular welt carrier and principally used in the alternating Three Carrier System of knitting.

FOOT - The leg or main yarn section of a hose.

CALF - That part of the stocking that covers the calf of the leg.

CONE - A body which has a circular base and tapers uniformly to a point at the top. (Textile: a body having this shape and usually made of cardboard; used to wind thread upon to supply knitting machines, etc.)

COURSE - In Full-fashioned knitting, one complete raw of loops across the width of the fabric.

DENIER - The designation of size of silk, rayon or nylon which is the weight in deniers or .05 grams of a 4.50 meter skein of the yarn.

DIAMOND POINT TOE - The toe of a full-fashioned stocking, so-called because the fashioning process gives it the shape of a diamond.

DROP STITCH - A stitch running down in a vertical direction which may be caused purposely in the knitting of various designs or accidentally by a broken thread or needle.

EXAMINING FORM - Used for the same purpose as the examining board; made in the exact shape of the human leg.

FASHION MARKS - Marks caused by the transferring of loops to adjacent needles during the course of shaping and are visible below the welt and near the seam in the leg portion of the full-fashioned stocking.

FASHIONING - Increasing or decreasing the width of a fabric in such a manner as to make the garment form-fitting when the selvages are joined together.

FLARE - The upper part, usually the welt, of a stocking that is wide, or flared, at the top.

FOOTING - The operation of knitting the foot of the stocking which may be carried out on a single unit (i.e., the same machine that has knit the leg) or on a separate machine called the footer which has the "topped" legs transferred to it for completion.

FULL-FASHIONED - This term is applied to any hosiery or underwear which has been knit on a flat frame and shaped in the knitting; generally used in reference to stockings only.

GAUGE - Represents the number of needles per 1 1/2 inches, thus:

36 gauge x 2/3 -- 24 needles per inch.
39 gauge x 2/3 -- 26 needles per inch.
42 gauge x 2/3 -- 28 needles per inch.
45 gauge x 2/3 -- 30 needles per inch.
51 gauge x 2/3 -- 34 needles per inch.

GREY GOODS - Knit goods before undergoing the dyeing process; also called "in the grey".

GREIGE - The term applied to the condition of textile material prior to degumming and scouring.

HIGH SPLICED HEEL - Reinforcement section of the heel above the shoe line.

INSTEP - The arched forepart of the upper side of the human foot. That part of the stocking which covers the instep.

KNITTING - Derived from the Anglo-Saxon word Cnyttan, meaning threads woven by hand. The art of making a loose elastic fabric by the interlocking of one or more continuous yarns or threads employing needles of various character, either by hand or machine, forming rows of connected loops.

LEGGER - A machine for knitting the leg of a full-fashioned stocking.

LOOPING - Term covers the sewing up of the toe and heel of the stocking.

LOOSE COURSE - A row of loops slightly longer than normal, made to facilitate the topping on operation, turning of the welt, and insertion of the welt bar. It is also used for producing various designs through the difference in appearance of the longer loop.

NARROWING - The act of transferring selvedge loops toward the fabric center for the purpose of reducing the fabric width and thus producing a form-fitting garment when the selvedges are seamed together.

NEEDLE LINES - Vertical lines in the fabric caused by the needle being above or below the normal needle line, misalignment in relation to the needle at each side, or by a heavy or thin needle.

PLATING - Process of lining stocking or part thereof by adding

during the process of knitting, a thread of different material or contrasting color, this thread being placed under the original thread in such a manner that it appears on the reverse side of the finished stocking only.

POINTED HEEL - A reinforced heel section which is brought to a point at the seam, by the step-like formation of the reinforcement.

PRESS-OFF - An incompleted stocking which has been removed from the knitting machine due to some defect of loop formation or other cause.

PULL THREADS Threads which have been picked up and pulled accidentally by rough places in work table or by careless handling.

RAYON - Commercial term for artificial fiber resembling silk in luster.

RUNNER - A stitch running down in a vertical direction and caused by a broken thread.

SEAMING - The operation of sewing together the two selvedges of the stocking and closing up the back of the hose from the heel to the welt.

SELVEDGE - The outer edges of the stocking which are joined together in the seaming are known as the selvedges.

SINKER LINES - Vertical streaks showing in the hose as a result of defective sinkers or sinker motion, or from uneven alignment, etc. which cause the uneven appearance in the fabric.

SPLICING - Reinforcement of stocking with extra thread at heel, sole and toe.

STITCH - A stitch consists of one complete needle loop and one-half of each of the two adjacent sinker loops.

TINTING - A process of covering the yarn with a fugitive color that it may be readily distinguished when in contact with other yarns and particularly used in throwing to keep separated the various lots of yarn in the process of throwing.

TOPPING STAND - A rack and table used for the operator to top the stockings on the transfer bar for insertion in the footer.

TOPPING ON - This operation consists of placing a course of knitted loops of a previously made fabric upon the needles of the machine or points of the transfer bar. When a course of loops has been securely placed on the needle the fabric is raveled until this course is reached. In order to save time the separate fabrics are usually topped on the transfer bar and afterwards transferred from it to the needles of the machine.

TWIST - The number of turns or twists given to a yarn to bind its fibers together and thereby add more strength for manipulation and weaving. The amount of twist applied varies according to the material, process, means employed for its application, and ultimate requirement.

WELT - The upper part of the stocking furnishing the garter portion, preferably doubled and usually made of a different material from the rest of the stocking.

YARN - Any thread spun from natural fibers; animal, vegetable, or mineral; especially, thread prepared for weaving or knitting.[8]

DEDICATION

This manual is dedicated to Dan Wortman and George Brown, Personnel Director and Plant Manager, respectively, at Bernhardt Industries. Dan and George had the foresight to continue the Industrial Cooperative training program at Plant #1 through the school year 1974 - 75 so that the young people involved would enjoy a successful experience. They were interested enough in the successful experiences and training of eight young people to fight for their security, during the most difficult of economic times. The continuation of the I.C.T. Program made it possible for this training manual to be written. For all of their confidence in the youth of Lenoir, interest in the continued training of future furniture people, and patience with me; I dedicate this work.

I.C.T. Coordinator (Furniture)
Guidance Oriented Work
Experience Project
William E. White

ACKNOWLEDGEMENT

In this manual, the various machine operatings and practices represent the typical processes of furniture manufacturing. The information covered herein is intended to be of value to newcomers to the furniture industry as well as to experienced individuals who desire to cross train. This manual will serve individuals who operate the machines indigenous to furniture manufacturing as well as to those who desire to train for supervisory positions. The author wishes to express his deepest appreciation for the generous co-operation and assistance given by management, lead men, and operators at Bernhardt Industries Plant #1. With the efforts of numerous individuals at Plant #1, this work would not have been possible. To the following individuals, the author would like to give special tribute:

George Brown
Dan Wortman
Jim Griffin
Junior Clay
Lonnie Greene
Nick Foust
Ralph Coffey
Howard Carlton
George Smith
Red Nichols
Worth Greene
Chuck Calloway
Ira Borders
Troy Greene
Winfred Parsons
Earl Rader
Mack Keaton
Reather Erving
Walt Goines
John Scott
Fred Corpening
Cecil Absher
C.J. Barnwell
V.J. Hollar
Robert Welch
Earl Herman
Jim Gilbert
Doc Clippard
Virgil Whittington
Steve Anderson
Junior Hendrix
Mike Shoemaker
Ed Coffey
Carl Robbins
Charles Thompson
Jim Craig
Thirman Whitener
Dwight Drum

Purpose

The purpose of this training manual is to provide technical material and training plans on all of the machines and jobs in typical furniture plants. The manual is intended to provide a workable text and outline for cooperative education programs in the public school system as well as for individuals currently employed in the furniture industry.

The training plans that are included for each department in the furniture plant are a vital part of the training objective. The outlines are not intended to cover every technical point of every job or machine, but are to be used as a guide. The trainer or lead person will supply all of the necessary related information required to supplement the training plans. The outline form is to be used by the trainer as well as the trainee. The trainer should use the outline as a lesson plan to insure that the basic principles and practices of the job are covered. The trainee uses the training plan outline to study the lesson that the trainer has given him. The trainee should also use the outline to make notes on, while the lesson is being given, since the outline will not contain all of the technical information required.

A Brief History of Furniture Manufacturing In America

Furniture making migrated throughout America in the early years of our nation because the need for basic household furniture was so great. In Virginia and the Carolinas, an abundance of native hardwoods and a good supply of skilled craftsmen helped the industry expand at a steady pace, and by the early twenties most of the producers had established a respected name. The depression years failed to slow the growth of the Southern furniture industry and by World Way II, mass production has been developed to a point that furniture manufacturers in the South took the lead in furniture manufacturing innovations. Today, North Carolina and Virginia produce 60% of all wood bedroom furniture, and 52% of all wood dining room furniture produced in this country. North Carolina alone is the number one producer of upholstered furniture.

Furniture Manufacturing

Furniture plants that manufacture dining room and bedroom suites have a systematic procedure for building and selling their furniture. The manufacturing process starts with "feeling out" the demands of the customers. Administrative personnel learn from their sales force and customers the demands of the consumers. Designs that appeal to the homemaker are of utmost importance. After gathering all of the information on design trends, the design department along with company officials decide on a design that they think will sell.

The design department takes the style ideas and blends them with manufacturing experience to come up with a suite that can be procuded at a competative price. A drawing is made of the suite that is complete in every detail. The drawing is full size, full scale, so that it can be used throughout the manufacturing process. Some of the basic styles used today are modern, Danish modern, Early American, Colonial, Mediterranean, Spanish, Italian, and French Provincial.

The drawing is sent to the Process engineering department or the Bill Out Department. In Bill Out, each individual part of every piece in the suite, is put on a tag master. The bill contains all of the operations that the part will encounter in the manufacturing process. The Bill Out Department also cost prices the items used in the piece of furniture. It is essential that the Bill Out Department plan the schedule of

operations and lumber used to that the material will be used to the best advantage. In so doing however, quality, design, and strength must be strictly maintained.

The bills are passed on to the Sample Department where sample pieces are made and finished. If the company planners and design people like the sample, and don't desire to make any changes, then the samples are sent to the showroom.

The company showroom is decorated with the sample suites and accessories. The local showroom is open during the fall and spring shows for buyers to visit. Regional markets are held in Atlanta each July, Sanfrancisco each January, and in Dallas each June. The sales force sells the furniture at the showroom and it is from these orders that the size of the cutting is determined.

When the sale is complete and all orders are in, the plant is tooled for production of the suite that sold. If more than one suite was shown, which is usually the case, the best seller is the suite which is manufactured.

It is the responsibility of the Production Control Department or priority scheduling to route each part through the plant according to the operations required on each. Instead of releasing all of the bills at one time, they are sent out according to the length of time it takes to work each part so that all parts will arrive in the cabinet room at the same time. Through production control, each department is given a planning tool. The production control people do not

guess about what they are doing. They know by each day's production whether or not they are on schedule.

Through the experience of this department, the plant supervisors can look ahead six months and tell what will be in production in the cabinet department. This foresight allows sales and shipping the ability to tell a customer when his furniture will be shipped and predict accurate delivery.

Production control also lets the supervisors see what the problem areas are soon enough that something can be done about them. This saves much lost time and expense. It also tells management if there is time available, in order that one plant might help another in the organization.

Most of all, production control sets up the plant for efficient operation and enables supervision to make any necessary adjustments.

The Lumber Yard and Kiln Area

Most large furniture plants have a central lumber yard. The central lumber yard is where the lumber that comes from the saw mill is sized, stacked, and stored. The most modern lumber yards are equipped with automatic sizing and stacking equipment. The lumber is stacked or "bunked" in lengths from eight feet to sixteen feet. One bunk contains lumber of the same thickness but of varying widths and lengths.

The amount of labor saved and the speed of the operation is very valuable. In some operations, the stickers are put between the layers of boards by men stationed near the bunk but the actual handling of the individual boards is done by the machine. If there are enough boards of the same length to make a bunk, the stepping process is not used.

The lumber yard is the place where the lumber is stored until it is needed in the plant. The central lumber yard has many different kinds of wood, many of which require special drying techniques. For instance some woods are completely air dried. This means that the wood is stored outside

bunks until it is dry enough to be cut and machined into furniture parts.

The bunks are positioned in the lumber yard so that the prevailing breeze hits the end of the bunk. This position is achieved so that the drying process will be slow and as even as possible.

The lumber that requires kiln drying is moved to the kiln from the central lumber yard on a schedule that allows enough time for drying before it is actually needed in the plant. The kiln operator is responsible for calling the central lumber yard and having the lumber delivered so that when he is ready to load his kiln, he will have the correct amount and species of lumber available.

When the lumber comes out of the kiln it is moved to nearby plant storage so that when the rough end is ready for the lumber it can be moved quickly and easily to the lumber lift.

Rough Machine Department (Rough End)

In a typical furniture factory, the lumber used is hardwood. After it has been kiln dried and is ready to enter the shop for production, it is processed through a group of machines which are frequently referred to as the rough mill, or rough end. The rough end is usually very close to the kiln area. This facilitates easy, quick, and safe transportation of the lumber. The lumber is stacked in bunks, and each bunk is loaded on a fork-lift and transported to the lumber lift. The lumber lift is a device that raises the bunk as it is used. This movement keeps the lumber at working height for the people who unload the bunk and move the lumber to the cut-off saw.

Purpose

The hardwood enters the rough mill in the shape of boards of random length and random width. If the factory is making a group of chest of drawers, one of the first things is to get the proper number of pieces of wood of the right size for each of the wood parts in the chest of drawers. These pieces must be cut from random length and width lumber. The cutting to length and width is one of the purposes of the rough mill. Regarding thickness of parts, it is customary to cut each part out of lumber which is one of the standard thicknesses best adopted to that particular part.

Many of the boards will contain natural defects such as knots, bark edges (called wane), decay, and worm holes. In a chest of drawers, the surfaces that are exposed could not

be visable, so they must be cut out and discarded. The chest must be made of acceptable parts that are free of defects. This process of removing defects is another purpose of the rough mill.

In the process of drying lumber, other defects occur which would not be acceptable in the finished chest, chiefly checks and splits. Drying affects some species of wood more than others. For example, swamp oak will check more than poplar. Checks and splits are cut out in the rough mill because they too are not acceptable for exposed surfaces in furniture. Drying also produces the defect called "crooked lumber." This defect is the amount the lumber has changed from its flat and straight shape. Some lumber is affected more than others. For example, poplar will stay straighter and flatter than gum. Crooked boards are either cut into small pieces that can be used or discarded in the rough end.

The quantity of stock for each part depends on the number of finished pieces of furniture to be manufactured. If the plant was to manufacture 1,000 chairs, 2,000 front posts would be needed, 1,000 front seat rails, etc. Some of the parts would be culled during the manufacturing process. The part culled could have been chipped, and broken, or otherwise spoiled. Because of this spoilage, it is necessary to start with an excess amount of stock. For instance, in chair manufacturing, if 2,000 front posts are needed, it may be necessary to start with 2,100 pieces of front post stock. The amount that is excess to begin with is called "over-run". The experienced people in the plant determine the amount of

over-run based on how successful they have been with that type of piece in the past. Over run is generally expressed as a percent of good parts needed. For example, front posts 4%, front seat rails 3%, or solid tops 6% and so on.

In summary, there are six purposes of the rough end.

1. To cut from random length and width lumber pieces of the specific length and width needed for each part. This lumber comes from standard thickness and grade which is specified for each furniture part.

2. To cut out natural defects such as knots, and drying defects such as checks and splits in such a way as to provide stock that is permissable in the finished product.

3. To eliminate stock which is too crooked for the manufacturing process.

4. To cut the required amount of stock including over run for the size lot which is to be run.

5. To maintain the required amount of stock for uninterrupted plant operation.

6. To accomplish the above with the least practical labor cost and preventable lumber waste.

There are many combinations of machines and sequences of operations that can be used in furniture plants. If one layout is understood then it is easy to understand other arrangements and their reason for being different.

The lumber lift is a device which saves considerable labor. The lift is an elevator with rollers and rails on its floor. The rollers and rails make it easy to roll a bunk of lumber on to the lift. The lift operates in a pit that is deep enough so that when a bunk of lumber is on the lift, and it is lowered into the pit, the top boards of the bunk will be at easy working height. The infeed table of the cut-off

saw is very close to the lumber lift which makes it easy to move the lumber off of the lift and onto the table. In fact, most people who feed the cut-off saw never actually lift the boards. Instead, the feeder slides and levers the boards into place. As the top layer of boards is used, the lift operator raises the lift enough to keep the top of the bunk at the most convenient height. The worker at the lumber lift assists the operators by moving boards into position on the infeed table of the cut-off saw. He also removes the stickers and stacks them on trucks or in a position to go back to the lumber yard to be used again.

The sequence of operations for the rough end is as follows: (1) cut-off saw, (2) facer, (3) rough planer, (4) rip saws.

Production Capacity

In a conveyorized or smooth operating rough end, the production of the department is limited by the output of the slowest operation. There is no judgement required at the facer and the rough planer and no material handling is done by the operator. Therefore, it is customary to provide facers and planers with excess production capacity to insure that neither is a bottle neck.

The operators of the cut-off saws and rip saws make judgements on every piece of stock that they handle. They also must handle considerable stock by hand. Consequently, the production capacity of the cut-off saws and rip saws depends on the men and not the machines.

Machines in the Rough End

The following is a list of the machines in the Rough End.

1. Cut off saw
2. Facer
3. Planer
4. Rip saw
5. Glue Reel
6. Continuous Edge Gluer
7. Copy Lathe
8. Moulder

The first machine in the rough end is the cut-off saw. This machine has already been mentioned in conjunction with the lumber lift. The cut-off saw is the machine that cuts the various length boards into the required rough lengths depending on which furniture part is being manufactured. The cut-off saw operator is not required to cut each piece perfectly square nor does he have to cut each piece to the exact length. The purpose of the cut-off saw is to cut to rough length, and to cut out defects, and to do these two operations with minimum lumber waste and labor cost.

The cut-off saw operator cuts pieces for furniture out of random length stock. However, the random length pieces don't always take up the entire piece of lumber. In other words there is some of the board that can't be used and is therefore waste. If the part being cut is a long piece such as for a bed side rail which is 76" long, then the rough would be 77". In such a situation, if the board that the rail was to be cut from were eight feet, the waste would be nineteen inches. There is a great deal of planning that goes into the percentage of waste for each part cut and

naturally the company would try to keep the percentage of waste to a minimum. It should also be kept in mind that the different length boards that come to the cut off saw will affect the waste also. The different lengths range from eight feet to sixteen feet. The exact lengths are eight feet, ten feet, twelve feet, fourteen feet and sixteen feet. So if a board ten feet long and the same 77" bed rail is to be cut from it the waste increases to forty three inches. However, if a piece fourteen feet long is to be cut into 77" bed rails, two rails can be cut from the board with only fourteen inches of waste.

It is a logical rule that the longer the piece to be cut the greater the percentage of waste. Take for instance the case where a fifteen inch piece is cut from an eight foot board. There can be six fifteen inch pieces cut with only six inches of waste.

You have probably already asked yourself about using the long pieces of waste for other furniture parts. In an efficient operation, the cut-off saw operator often cuts several different lengths at one time. By doing this, he is able to use the shorter lengths for shorter parts of the same or related pieces of furniture. Take for instance the case of the 77" bed rail. Each time the cut-off saw operator finds a 19" piece left over from an eight foot board, he can cut a fifteen inch piece out for chair seat rails. This leaves only four inches of waste in an eight foot board.

The ripsaw is a machine that has not been mentioned thus far. There are three different types of ripsaws; the self-

fed circular ripsaw, the straight line ripsaw, and the gang ripsaw. The straight line ripsaw is the most common ripsaw used in furniture manufacturing. The stock comes to the ripsaw after it has been cut to rough length at the cut-off saw, had one face cut flat at the facer and been cut to uniform rough thickness by the rough planer. It is still random width as the boards from which it was cut at the cut-off saw were random width. Therefore, it is the purpose of the ripsaw to:

> rip to rough width, rip out defects, machine straight square edges for edge glueing, and accomplish the above with minimum lumber waste and labor cost.

ACCOMPLI... SUPERVISOR'S INITIALS DATE

C. Set-up

1. Set up lumber stops on cut off saw (The stops are adjusted to the various lengths needed in the manufacture of a specific suit-an experienced operator can cut three or four elngths stimultaneously)

   NOTE: The cut off saw operator is responsible for the rough jointer and planer as well as the cut-off saw. All three must operate perfectly in order to run stock across the cut-off saw.

DIVISION COMPLETED

D. Operating Procedure

1. Push lubricating button to lubricate planer
2. Start planer
3. Start jointer
4. Start conveyor belts
5. Start cut-off saw
6. "Bunk" unloader feeds lumber (1 piece at a time) to cut-off saw operator
7. Pull board up to saw
8. Visually determine defects in piece
9. Push lumber to the longest stop that will enable a good board to be cut without defects (knots - checks etc.)
10. Cut out defect
11. Push board up to stop again
12. Repeat process of cutting out defects while obtaining longest boards possible

DIVISION COMPLETED

E. Maintenance

1. Grind planer knives
2. Grind jointer knives
3. Grease entire operation

The Glue Room

Panels, posts, and "block up" used in manufacturing are born in the glue room. The glue room in a furniture factory is the area that receives blocks and sheets of wood that are put together with glue to make new wood forms that are made into furniture.

The term post is used to refer to almost any solid part of a piece of furniture. In a chair, for instance, the front post, front stretcher, arm stub, arm, top back, bottom back, and center back are all cut from wood that has been "glued up." Some parts of the chair are made from wood that has been glued-up, cut to size and then turned on the lathe. Some of the parts that are lathe turned are the front post and stretchers. The list of pieces of furniture that are made from stock that is glue-up or blocked up is very long and the list of parts of these pieces is even longer. To mention a few will illustrate the point. In a table, the center post and legs, are made of glued stock. In cabinet pieces, the legs and tops are glued stock. In beds the headboards are often glued pieces, put together to make a decorative design and functional headboard.

When a furniture person talks about a panel he is usually talking about a door to a case, an end or back on a case, a table top or any other furniture part that is fairly large and flat. Panels that are not solid wood are made out of cores and sheets of veneer. There are two kinds of cores, fibre cores and solid cores. There are several grades of

fibre core. The highest grade has the smallest particles or fibre parts, the lowest grade has the largest particles. The solid wood core is usually a core that has been glued up from narrow pieces of wood. Panels are made in several plies. A ply is one thickness of either veneer or core. The most common panels are two ply, three ply, five ply, and seven ply.

The glueing operation is a fast accurate method of glueing and assembling wood. The stock that is glued up for parts like table center posts comes to the glue room fron the rough machine room. If the required stock is thick and long, it is usually glued up using sheets or blocks approximately one inch thick. The one inch sheets are glued up on the glue reel in the rough end. When the glue is set, the boards are run through the planer. The maximum thickness is assured by checking the stock when it comes out of the planer. The pieces of lumber that are used on the glue reel are boards of different widths. The rip saw provides the glue reel with its stock. "Random ripping" is the term used for the rip saw operation which cuts the different width boards for the glue reel.

The glue room has several pieces of heavy duty equipment. The glue spreader is the machine that spreads glue on both sides of the piece of lumber. The rollers that apply the glue to the board can be adjusted to the different thicknesses of wood. For instance, the glue spreader will apply glue to veneers 1/28 of an inch thick, or to blocks 4 inches thick.

The cold press is the machine that applies the pressure to the pieces being blocked up. While the pressure is being applied, screw clamps are fastened to steel rails that have been placed on top and on the bottom of the stack of boards. The amount of pressure applied by the cold press depends on the square footage of stock being glued. Square footage is figured by multiplying the width by the length. Once the screw clamps are in place and tightened, the pressure is released. The block-up is then hoisted to a place where it can set up. The set up time varies from 3 to 8 hours depending on which glue is used. The "white" glue takes the least amount of time. White glue is usually used when blocking up hard woods such as oak and elm. The brown glue is used for blocking up soft woods. Most panels are glued up with the brown glue.

Panel Gluing and Assembly

The panel making process that takes place in the glue room is interesting. The most common panels are the 3, 5, and 7 ply panels.

The three ply panel assembly is as follows:

The back veneer is placed on the assembly rack which is called the "dump", the core is run through the glue spreader and placed on top of the back, then the face veneer is laid in place. This process continues until the dump is full and ready to be wheeled to the cold press.

The five ply panel construction process is as follows:

The back veneer is run through the glue spreader (the spreader applies glue to both sides of the piece of veneer) and placed on top of the back, the core is placed on the crossing, the other crossing veneer is run through the glue spreader and placed on the core, the face veneer is placed on the crossing. The gluing process continues until the dump is full and then it is wheeled to the cold press.

Seven ply construction is very similar to 5 ply construction except that both crossing veneers on both sides of the core must be run through the glue spreader. This means that between the second and third plies, there will be double glue. However, to run the core through the glue spreader would require adjusting the spreader on each panel run. By gluing the two crossing veneers on each side of the core, the spreader needs no adjustments

becasue both of these veneers are the same thickness, 1/20th of an inch.

Panel Construction

In modern furniture manufacturing case goods are made out of veneered stock. The glue and veneer rooms in the furniture plant make the panels used in case goods. Panels consist of 1/28" veneers which are glued on to solid wood or industrial fibre cores.

There are two types of panel construction. Industrial fibre core panels are three ply and five ply, construction and solid wood core panels are five ply construction. The veneer that goes on fibre core can have its grain running in either direction. The technical terms used in explaining fibre core veneers are "non-directional." Non-directional means that the veneer is glued on fiber cores with grain running in either direction. The direction of the grain pattern will depend on what the part is to be used for. For example, doors will need to have the veneer grains running up and down. However, the front and back should be in the same direction. So, on a panel that has a fibre core, the veneer on the front and back can run in either direction as long as they match.

The solid wood core panel is a little more complicated because they are made of five ply construction.

A ply refers to each thickness of lumber or veneer that goes into a panel. The solid wood core panels require five ply construction to eliminate bowing. With two sheets of

veneer, one face and one crossing on each side of the core, the forces that cause bowing will be equal. This equal or stable situation will keep the panel flat. The direction of the grain in five ply construction is very important. The face veneer and the crossing veneer must be opposite one another. Most crossing veneer is 1/24" thick while face veneers are 1/28" thick. The five ply panel that has the veneer grain running in the opposite direction is a very strong panel.

When the five ply panel is built the face is laid down first with the grain running in the same direction as the solid wood core. Then, the crossing is laid on, which is usually poplar, with the grain running 90° to or opposite the grain of the facing and core. The solid core is the third piece to be laid in place. The fourth ply is the second or back crossing with its grain running the same as the first crossing and opposite the core. Finally, the back veneer is laid in place. This back is sometimes the same grade of veneer as the front. If the back is to be seen when the case is completed, the veneers are the same grade, if not the back can be poplar.

Poplar veneer is cheaper than some of the face veneers, such as pecan. The poplar veneer is just as strong as the fancy veneers so nothing is lost.

Veneer Room

Veneer is a thin sheet of wood that has been sliced or lathe turned off of a log. Veneers that are sliced are used for facings. Face veneers have a pretty grain pattern and can be very decorative on a piece of furniture. The most popular pattern is the cathedral pattern. The cathedral pattern is the one that looks like a church steeple. The cathedral pattern is achieved by positioning the log out of center on the slicer. A one half inch offset is typically used to achieve a good cathedral pattern. The more offset the more chatedral the affect in the pattern. The veneer that is rotary cut like poplar and gum is used for crossings. The crossing is the 1/24" piece of veneer that is laid between the core and the face in five ply panel construction. The most common crossing material is poplar.

When face veneer is shipped to the furniture plant, the entire half log or "flitch" is crated and shipped. In other words, the crated log looks just like a log except that it is sliced lengthwise in 1/28" slices. The veneer is uncrated in the veneer room and sent to the drop clipper. The drop clipper operator is responsible for cutting the proper lengths that are called for on the bill. The bill tell the operator what lengths to cut for the particular panels in the suite being manufactured. Most drop clipper operators can memorize a bill and cut more than one length at a time. It is his job to cut out all defects and eliminate as much waste as possible.

Crossing veneer is also cut on the drop clipper. Since crossing is cut and ordered in the lengths necessary to manufacture a certain piece of furniture, width is the only cutting operation required. The drop clipper operator that is cutting crossing material allows about ⅛" extra. The extra ⅛" makes the glueing operation easier and quicker. With the extra⅛" the pieces that are being glued do not have to line up perfectly. The reason for this is that the edges of the panel will be trimmed later in the machine room. The machine used for the trimming operation is the double end trim saw.

Once the face veneer is cut to length at the drop clipper, it is trucked to the block out shear. The block out shear is used to achieve the required width. The operator tries to keep the waste at a minimum. He first cuts one side to get a straight edge. Using the straight side to work from, he then cuts the width needed. Most block out shear operators leave ⅛" extra so that the edge can be jointed smooth for easy, accurate splicing and trimming.

The printing operation that is used in furniture manufacutring is a process of painting the design (usually wood grain pattern) on to a face veneer. A popular face veneer that is printed is blanquita and another is maple. Blanquita is a South American veneer that has a light color and close grain. The veneered face that is printed can be a surface that is spliced pieces of veneer. In other words, a panel that is thrity six inches wide can be made up of several narrow pieces of veneer that are spliced (glued) together.

In order to splice the veneer the edges have to be straight and smooth.

The head jointer is the machine that makes the edge of the veneer very smooth and straight. Jointing is the operation that follows the block out shear. The smooth edge that the high speed knives of the head jointer produces is important to the glueing operation which is done on a machine called the splicer. Before the veneer goes to the splicer, the edges of the veneer are sprayed with glue. The glue must be allowed to dry up to several hours depending on the mixture of the glue.

The splicer operator aligns the two pieces of veneer and moves the glued edges into the machine. The splicer heats the glue, presses the glued edges together so that they will bond and discharges the spliced piece out the other end. The splicer is very important in both printed veneer and fancy face veneered pieces of furniture. The printed veneers such as blanquita and maple are run through the splicer much faster than the matched fruit woods. The printed veneers can be easily trimmed and printed and need very little care in aligning the grains. On the other hand, the fruit woods such as pecan that are made into "v" patterns for table tops require a lot of careful alignment of the parts to be spliced.

Fancy Face Veneers

Fancy face veneers are made in a special area of the veneer room. Three or four people work together in the cutting, shaping, and taping procedure that is required to achieve pretty and accurate fancy faces. A fancy face veneer is one that has a "v" match, a border or some other specially cut veneer that, when put together, create a fancy covering for a panel. The most common uses for fancy faces are on dining room tables, end tables, chest of drawers, servers, and night stands.

The assembly of fancy faces is probably different in every plant, but basically the procedure is as follows:

> The "v" match or center section is cut on the drop clipper and spliced. Then it is taken to the fancy face assembly area. If the face has a border around it, the sections of the border are shaped with a special jig and router. Once all the pieces are cut, the assembly process starts. The center is laid out on the table and the border pieces are taped to it. The important part of the assembly is the fit between the border and the center. The border must fit up to the center if there are to be no cracks between the two pieces. Once the fancy faces are taped together, they are ready to be taken to the glue room where they will be glued up on panels. The panels will then be made into table tops, etc.

Finish Machine Department

The finish machine room is the area of the furniture plant that makes the wood into the required shapes that go together to product the actual piece of furniture. The stock that is cut in the rough end is sent to the finish machine room to be turned, shaped, and bored as well as many other operations. When the stock arrives at the finish machine room it is blocks of wood that are long rectangles, squares and many other shapes depending on what part of the piece of furniture the wood will be made in to. Some of the blocks will be turned into round legs for chairs. Others will be sawed into side panels for chairs and sides for cases or beds. Since wood cannot be worked as close as metal, it is usually machined to a tolerance not closer than 1/32nd of an inch. The finish machine department has the responsibility of machining the material so that all of the pieces will fit together.

Many operations are required to insure that when the pieces are assembled the finished product will be the exact height, width, square, and level. The wood has to have joints cut into it so that the pieces can be fastened together. The oldest type of joint used in furniture construction is the dovetail joint. This joint is still used in the finest pieces of furniture made today. The dovetail joint is thought to be the strongest of the wood joints. The mortise and tenon is a very popular joint and is probably the most widely used. In the finish machine room, the dovetail machine cuts dovetail

while the mortise and tenon can be cut on several different machines. For instance, the mortise can be cut on the mortise or the router. The tenon is usually cut in very rapid production on the double end tenoner.

The sawing operations are very important in producing furniture parts. The variety saw is used to cut straight pieces of all kinds. The name "variety saw" comes from the many different or variety of cuts that can be made on the saw. The bandsaw is the other very important saw in the finish machine room. The bandsaw is used to cut curved parts that go into the making of various furniture pieces. For instance, chair backs and overlays are cut on the handsaw.

Many furniture parts need their edges shaped or a decorative groove cut in them. The shapers and routers in the finish machine room are responsible for much of this special shaping.

The parts that require boring or holes drilled in them, for one of many reasons, are sent to the horizontal or vertical boring machines.

One of the most important operations that is done in the finish machine room is the turning or lathe operation. The square pieces of stock that are turned into round, octagonal, or any of the many other shapes that are used for chairs, bed, and case legs of all types. The lathe operation requires skilled operators and a highly skilled person to make the knives and set up the lathe heads. The machinist, "craftsman", that makes the knives and sets up the lathe heads is a vital person in the chair and case good manufacturing process. Legs are required for many pieces of furniture, and they have to be

produced accurately, efficiently, and in large quantities. This task is the responsibility of the lathe operators and the set-up man.

Some of the machines in the finish machine room are very simple and some are very complicated. The following is a list of the machines in the finish room, and a brief description of their functions:

Double End Tenoner - the double end tenoner can tenon, size, trim, shape, dado, groove, clip tenon, scratch line, cope tenon and miter. While we may not do all these operations to a piece on this machine, we may do as many as three or four of them at one time.

Panel Sizer (With cope heads) - The panel sizer can size, trim, shape, dado, scratch line, miter, and clamp nail.

Hand Jointer - The hand jointer is a head type machine. It's purpose is to cut a straight line to work from, but it can also clip tenon, taper and level.

Router - The router is used to cut lines, straigh or curved, cut designs, mortise, bore, and shape.

Variety saw - The variety saw can trim, size, rip grooves, dado, notch and miter.

Bell 24 - The Bell 24 can miter or compount miter and bore in the same operation.

Slat Bed - The slat bed can rip, groove, shape, notch, in multiples

Bandsaw - The bandsaw trims, rips, but is used mainly for cutting curved lines.

Back Post Trim & Bore Machine - The back post trim and bore machine is used to work chair back posts, it can trim miter and do several multiple bore operations at one time.

Dovetail (Male and Female) - The dovetailer cuts the mortises for drawer sides, backs and drawer fronts.

Mortiser - The mortiser cuts square holes for the rail tenon and can also be used as a boring machine.

Horizontal Boring Machine - The horizontal boring machine is used to bore table tops for rims and to bore rails in the ends for dowels.

Vertical Boring Machine - The vertical boring machine is used to bore any flat surface.

Hand Shaper - The hand shaper cuts most any shape, but all work is done manually.

Turn Table Shaper - The turn table shaper cuts its shapes mechanically, and has a form to shape to. All stock is usually bandsawed before shaping. This machine can shape three sides in one operation.

Profile Shaper - The profile shaper is a shaper that uses a form. Stock does not have to be cut to a pattern before shaping.

Nash Sander - The nash sander is used to sand round turnings of various sizes.

Triple Drum Sander - The triple drum is a three drum sanding machine and is used in rough sanding. It's purpose is to equalize the thickness of stock.

Lago Embosser - The embosser is a machine that uses a metal die with heat and pressure to stamp patterns in flat wood.

Spindle hand Carver - The spindle hand carver can be a single or multiple carving machine. The machine is operated by hands. The operation follows a pattern with a hand held stylus and the machine follows along and carves the wood.

22. Clutch adjustment

DIVISION COMPLETED

C. Setup

1.. Raise hood
2. Take off head (tear down)
   a. Unlock several Allen Screws
   b. Loosen nuts and remove mantel bearing
   c. Slide head off (right facing machine) of arbor shaft
3. Put on head (build up)
   a. Slide head on arbor shaft from right to left
   b. Swing bearing into position and lock
   c. Center up squares to set head by using
   d. Adjust mantel bearing to fit length of stock and tighten securely
   e. Place head in position to run stock and lock down allen screws on head.
4. Cam
   a. For round turning a round cam is used
   b. For square turning a square cam is used
   c. Note: octagonal, hexagonal and other shapes are also used on the turning lathe. The cam determines the shape of the turning.
   d. Cam has one large center hole that chuck slides through and two small mounting bolt holes.
   e. Bolt cam to main chucking gearbox
5. Steady-rest: When turning long posts position steady rest in the center of the stock. The steady-rest helps support post to eliminate vibration.

Sanding Department

When quality furniture is talked about, one of the first things that comes to mind is sanding and the subsequent finish. If sanding is done properly, it adds to the finished beauty of the wood. To get the proper polish, it must be cut down before being polished.

The sanding room takes the parts after they have been cut to size and prepares them for assembly. Some pieces are sanded as many as four different times before they are assembled. In sanding, it is vital that the part not be sanded out of shape, but rather sanded the proper amount to obtain a smooth finish while insuring proper fit when assembled. Some parts such as mouldings and ornamental pieces that miter are sanded before the miter is cut. Therefore the sanding room and the finish machine room have to work closely, sometimes even transferring materials back and forth several times.

Wood that is polished with too coarse a sandpaper grit will have smudges that will cause dark areas in the finish. If it is cut down and polished properly, it will look clear and the finish will appear to have depth.

The machines used in the sanding room include:

1. Wide belt sander
2. Sherrill wide belt
3. Side stroke
4. Flat belt - band
5. Flat belt - lever
6. Hyde stroke - belt sander

7. Pump sander
8. Whip sander
9. Horizontal spool
10. Vertical spool
11. Horizontal string
12. Vertical string
13. Bicycle string
14. Open drum
15. String sander

Cabinet Room

The purpose of the cabinet room is to take the parts after they are machined and sanded and assemble them into a case, table, or chair. All parts are machined to as close a tolerance as possible. With all the machining some parts have to be hand fitted such as door and drawer fronts with mouldings. After the item has been assembled it is cleaned up, joints puttied, dents and scratches sanded out, edges broken and inspected.

The machines in the cabinet room are:

Auto-nailer (under and overhead) - The auto-nailer is used to attach mouldings to doors, drawers, galleries and posts.

Hinge Seat Machine - The hinge seat machine cuts a seat for hinges and pre bores for hinge screws.

Auto Screwdriver - The auto screwdriver is used to attach hinges to doors.

Hand Screwdriver - The hand screwdriver is an electric or air powered hand held tool that can be used at the operators convenience to installing screws anywhere in the case.

Staple and Nail gun - The staplers and nail guns are air powered and are used to either nail or staple parts together.

Case Clamps - The case clamp is an air powered machine used to clamp all jointed cases together so that they can be securely fastened while in the clamp.

REFERENCES: Lead men at each department at Bernhardt Ind.

PRIMARY FUNCTIONS: To miter, groove, and bore chair blocks

MACHINES, TOOLS, AND EQUIPMENT USED: Allen wrenches, adjustable wrench wrenches (various sizes) hammer, screwdriver

Upon completion of each division the supervisor will initial and give the date of completion.

DIVISION AND JOBS	ACCOMPLISHED SUPERVISOR'S INITIALS DATE
A. Safety 1. Use safety precautions as with all electrical and power machinery 2. Keep hands and fingers clear of moving parts 3. Be alert. 4. Use ear plugs and safety glasses. DIVISION COMPLETED	
B. Parts 1. Frame 2. Motors (5) 3. Pulleys (6) 4. Gear box 5. Boring machine 6. Miter saw 7. Groove heads (2) 8. Guides (3) 9. Slide (2 part) 10. Pressure Bar Assembly 11. Cams (2) 12. Belts (3) 13. Idlers (2) 14. Switches (2) 15. Protective Relay Box 16. Thermal Switches DIVISION COMPLETED	

ACCOMPLI... SUPERVISO... INITIALS DATE

C. Set-up
1. Set miter saws at desired angle
2. Place guides (control length of black)
3. Adjust pressure bar assembly
4. Adjust cams to control depth of groove
5. Adjust boring machine to obtain desired depth of screw hole
6. All adjustment have ahdnles, cranks,or wheels no additional tools required.

D. Operation
1. Position stock truck with load to be run
2. Position empty stock truck for finisned material.
3. Turn "on" cutter control switch
4. Turn "on" feed control switch (after checking to be sure all cutters are running.)
5. Place end of a piece of 1½" x 1" stock between the upper slide and miter saw when slide is in rear position. (as slide moves forward, it will push the stock into the miter saw which will cut off a small piece of the end at desired angle)
6. With slide again in rear position, turn the piece of stock over and push it between slide and saw until it is stopped by guide.
7. Forward movement of slide will again push stock into miter saw cutting a block of desired length and angle.
8. Repeat procedure turning stock over each time and pushing until stopped by guide.
9. As blocks are mitered they fall to the carrier slide where they are pushed forward by its movement.
10. They are held in place by a spring loaded pressure blade which is part of the pressure bar assembly
11. The forward movement forces the blocks between two grooving heads which consist of three saws and spacers each.
12. The grooved heads are pushed apart by two cam surfaces which are attached to the slide and are adjustable to control the depth of grooves.
13. Springs return the heads to the inner position where carrier slide is again in rear position.
14. After passing through grooved heads, the block is pushed on to a holding mechanism which is part of the pressure bar assembly.
15. As the slide moves to the rear the block is released and left in the holding mechanism.
16. A boring machine located beneath the holder moves upward and bores a hole in the block.

D.O.T. CODE NUMBER _____

LENGTH OF ACCREDITED TRAINING (1) (2) Years

REFERENCES: Lead men at each department at Bernhardt Ind.

PRIMARY FUNCTIONS: To gather, fit, position all parts required to build a solid table

MACHINES, TOOLS, AND EQUIPMENT USED:
screwdrivers, hammers, table rim form, screws, table eveners, table slides, corner blocks, glue blacks, table dowels (pins) slide guides

Upon completion of each division the supervisor will initial and give the date of completion.

DIVISION AND JOBS	ACCOMPLISHED SUPERVISOR'S INITIALS DATE
A. Safety 1. Be alert, numerous tools are used in table assembly. Safety procedures should be followed for each individually. DIVISION COMPLETED	
B. Set-up 1. Set up a work bench (table) on which is placed a rim form (when a rim is required for assembly) 2. Build a "track" which consists of a long work bench with two rails covered with a smooth surface (felt, etc.) DIVISION COMPLETED	
C. Operation 1. Assembly of rims a. Rims are assembled on a work bench on which a rim is placed. b. Rims are assembled in two ways c. The corner block method and screws and the clamp and nail method d. Clamp nails are a special type of nail which	

ACCOMPLI...
SUPERVISO...
INITIALS
DATE

will hold joints together when driven into slots cut in each of the mating surfaces.

2. Clamp nail rim assembly
   a. Drive nails into the slots using a hammer
   b. These rims are used on tables with a pedestal type base.
3. Corner block rim assembly
   a. Rims for tables using corner posts are assembled with screwdrivers and require the use of corner blocks.
   b. Corner blocks join the corners of the rim
   c. Corner blocks contain screw holes for attaching them to the rim
   d. They also contain a larger hole for the installation of hanger bolts which are fastened to the table posts by screw threads.
   e. Place the rim parts (end rim and two side rims) in a form having the desired shape of the rim
   f. Attach the corner blocks using screws
   g. Rims are provided with screw holes for attac ing rim to the table top.
4. Top Assembly
   a. tops are placed on the track bottom side up after dowels have been placed in one of the two halves
   b. Check to be sure halves align properly
   c. Table eveners are placed at the center line where the halves join
   d. Fasten eveners with screws
   e. Drive screws with air powered screwdriver
   f. Use guages to mark the location of the rims and slides
   g. Rims and slides are attached to the top with screws
   h. Place glue blocks where they will strengthen joints (between top and rim)
   i. Filler leaves are placed in the table and the rims are attached
   j. The completed table top is moved along the track to the cleaning station
   k. Cleaning consists of removing excess glue, fingerprints, smudges, and polishing.

DIVISION COMPLETED

Finishing Room

The sophisticated finishing process and material that is used in modern furniture manufacutring has been developed through many years of experimentation and implementation. Numerous steps are required to "build" depth, smoothness, and color into the finish. The process starts with a smooth surface which is the responsibility of the sanding department. The actual finishing process starts with the application of shading stain which is sprayed on. The surface is then antiqued to give it an aged appearance. All edges are filled to insure a smooth finish on particle board cores that are used in many panels. The piece is then sprayed with stain followed by a wash coat. These two operations provide color and depth. The piece is then hand sanded smooth to eliminating any overspray. Wiping stain is sprayed on next which is wiped by hand to give the desired tone. Grain shading is then applied by a fine spray which accents the wood grain. Highlighters follow the shading spray with steel wool. This operation gives needed light and dark tones to cathedral grain patterns. A sealer spray is applied to seal the wiping stain so that it can be sanded without penetrating the stain. The piece is then hand sanded again before the blending stain is sprayed on. The blending stain provides character to the finish. The blending stain is padded, brushed out, and smudged by hand to give an antique look. The piece is inspected before the final sealer spray is applied. Following

the sealer spray is the cow tailing operation which is a process done by hand with a rag and stain to make the piece appear as though it has brush marks in it, this is also an antiquing effect. Then the piece is fly specked if so desired with a coarse spray which leaves spots on the finish, this is an antique accessory. The final shade spray is then applied before the first clear lacquer coat is sprayed on. The piece receives three clear lacquer coats which protect the finish and which are finally rubbed smooth in the rub room to an even sheen. The finishing process is complex and sophisticated even though many of the operations performed on the piece are short and simple. The end result however is far from simple looking. If the piece of furniture is to be a quality piece, it must be perfectly machined and hand crafted, followed by the above finishing process which is perhaps the most important process in it's development.

Rub Room

The purpose of the rub room is to smooth the lacquer finish to a satin sheen. The rub room people use rubbing machines equipped with soft pads to rub the compound which is liberally applied to the finish. The rubbing machines are air operated and move back and forth at a rapid rate. The operator moves the rubbing machine from side to side on the surface to insure an even smooth finish on the entire area. The rub room is part of the area in the plant known as the Rub, Pack, and Ship Department. The cases that are rubbed in the rub room move down the assembly line to the pack and ship area where they are packed and crated for shipping. The furniture manufacturing process is complete when the shipment reaches it's destination for the customers enjoyment.

CONSTRUCTION TERMS & DEFINITIONS

B.S.....The distance between two shoulders of a rail or panel that is notched or tenoned

Back....The measurement of a tenoned panel or rail from the tenon to the back side or the surface not exposed to view as furniture is observed

Back dust rails....A rail that fits between the End Panels or post in the back of a case

Back upright....A piece placed in the back of the case to position and support the back dust rail

Back veneer....The thin sheet of veneer that is placed on the surface of a plywood panel on the opposite side from the face

Band....A piece of wood or veneer placed on the edge of a core or panel so that when finished, the edge will resemble the other exposed parts of the case

Base....The lower section of a piece of furniture

Base rail....An exposed horizontal rail that fits at the bottom of a case

Block....To glue wood pieces to another to add to the size.

Bottom head rail....A rail that fits below the head panel, between the head post of a bed headboard

Brace blocks....Generally a triangular piece used to strengthen a piece of furniture

Cap Rail....A rail at the extreme top of a bed headboard, footboard or mirror frame

Case....A piece of furniture that has drawers and doors as opposed to chairs, tables, etc.

Center partition....A panel placed in a vertical position dividing the length of a case

Chip core....A wood substitute made of wood scraps and glue

Cleat....A strip of wood used to fasten two panels paralled to each other

Cope....To shape the ends of one piece to fit the shape of another piece

Core....The part that is the center of a plywood panel

Crossband....A thin sheet of veneer that is glued next to the core, in plywood panels, with the grain running in the opposite direction

Deck....The upper section of a piece of furniture

Drawer back....The panel that makes up the rear of the drawer

Drawer bottom....The panel that fits inside the drawer between the drawer front, sides and back

Drawer front....The front panel of a drawer

Drawer or door opening....The open space between the ends, uprights, and horizontal rails in a case in which the drawer must fit

Drawer partition....A panel that is placed front to back to divide the inside of a drawer

Drawer sides....The panel that encloses each end of the drawer

Dress....To cut to a desired thickness

Dust bottom....A thin plywood panel that fits in grooves between the parting rails, back dust rails and end dust rails

Dust frame....An assembly that fits lengthwise between the End Panels or post and under the drawers of a case, to support the drawers, and to prevent dust from getting into the drawers

Dust Rail....A piece that fits between the parting rail and back dust rail, separating the dust bottom

E.S.....The distance for the end of a rail or panel to the shoulder when the end is notched or tenoned

End dust rails....A piece that fits between the parting rails and back dust rails at each end of the dust frame

End panel....A vertical panel that encloses each end of a case or section of a case

End rails....Exposed rails that fit between the front and back post

Face....The measurement of a tenoned panel or rail from the tenon to the face side. Also the side of a part that is exposed to view as you observe the furniture.

Face veneer....The thin veneer sheet that is placed on the exposed surfaces of a plywood panel

False bottom....An assembled frame that is fastened under the bottom of a case

False top....An assembled frame that is fastened under a top to add to the thickness or appearance of a case

Female drawer guide....A grooved piece of wood placed under the drawer bottom in a front and back direction that engages the male drawer guide

Finished length....The exact length necessary for assembly

Finished thickness....Thickness necessary for final assembly or veneering process

Finished width....The exact width of a part for final assembly unless allowance is made for shipping

5 Ply....The number of layers of a plywood panel made up of the core, two X bands, a face, and a back

Front panel....A panel fit in the front of a piece of furniture

Front post....An upright piece at the front of each end of the case that extends to the floor

Front upright....A piece placed on the case in a vertical position between the drawers or doors

Gain of a drawer....A notched out section on the end of a drawer so that when dovetailed the drawer side will have clearance next to the post or end panel

Grain....Direction in which the wood fiber is running

Head panel....A panel that fits between the post on a bed headboard

Head post....An upright piece at each end of a bed headboard that extends to the floor

Inlay....An exposed piece of wood embedded in another exposed piece

Joint....To cut the edge of a wooden part for the purpose of smoothness or fitting

Laminate....To glue layers of wood together

Leg...A short post applied to the bottom of a case that extends to the floor

can be any ply.

Lock blocks....An upright piece fastened to a head or footboard tha is cut to accept the bed rail locks

Male drawer guide....A square piece of wood that is placed on the dust frame in a front back direction that engages the female drawer guide

Master bill....A list, tag, or sheet, giving the specifications of a furniture part necessary for machining and processing

Miter....To cut a piece of wood on an angle

Molding....Decorative pieces of wood that are applied to exposed parts of furniture generally made with a molder or shaper

Mortise....A groove, round or square hole cut into a piece to receive a tenon

Notch....To cut out a section of one part to fit into another

Overlay....An exposed part fastened on the surface of another part

Parting rails....A rail that fits between the end panels or post in the front of a case

Pilaster....An upright strip placed on the end of front of a case

Plywood....A panel made up of various layers of wood glued together or laminated

Rabbet....A groove cut in the edge of a piece so that the edge of another may fit into it

Right or left side facing....A designation of the side as you stand in front of the furniture

Rip....To cut parts to a width lengthwise with the grain

Rough length....The length lumber is cut at the beginning of the machining process. Allowance is made in the rough length for final machining

Rough thickness....Thickness of lumber to be used to obtain desired finished thickness

Rough width....The width lumber is cut at the beginning of the machining process

Shelves....Horizontal panels placed within a cabinet for storage

Shoulder....The section of a tenoned or notched cut that extends from the tenon or bottom of the notch, to the face or back side

Stile....The vertical part of a frame

Stop blocks....A small block placed in the back of a case on the dust frame to stop the drawer in the closed position

Stretcher....A rail that fits between the legs or post of a piece of furniture

Tenon....The distance from the shoulder or notch to the extreme end of a rail or panel. The part of a piece that fits into a groove or mortise

3 Ply....The number of layers in a plywood panel made up of a core and two face and back

Tilt rail....A rail placed above a drawer to prevent the front of the drawer from tilting when opened

To "take off" a case....The act of writing the master bill for the parts necessary to make a piece of furniture, as specified by the detail drawing.

Top....The panel that is placed on the extreme upper part of a piece of furniture

Tray....A compartment placed inside a drawer for storage of small items

Tray drawer....A drawer that is fit into a case behind doors

Trim....To cut parts to a length across the grain

Turning...A round shaped piece of wood made on the lathe .

Mr. William S. Stone
Caldwell County Schools
P. O. Box 309
Lenoir, North Carolina 28645

Dear Mr. Stone:

This is in reply to your letter of March 21 to Professor C. A. Anderson. It is agreeable to us for you to use excerpts from Production Woodworking Equipment and Furniture Construction in your furniture handbook for high school use.

If we can be of further help, please call on us.

Sincerely,

W. A. Smith, Jr.
Head

APPENDIX N

Proposed Production Trainee Program

BERNHARDT INDUSTRIES

PLANT 1

PROPOSED PRODUCTION TRAINEE PROGRAM

Availability - The production Trainee will be recruited from Area Schools in conjunction with the principal and I.C.T. Coordinators in each school.

Purpose - The purpose of this program is to recruit young people with good potential, highly motivated, and a desire to succeed. These people should not be planning on a four year college program and should be available for work or study immediately

Goal - The ultimate goal of this program is to produce young qualified management level supervisors.

The Program - The program is the result of planning on the top management level, to cycle young people into the Bernhardt Organization to allow them to achieve the highest level they are capable of achieving. We are aware that too often young people just graduating from school seek employment elsewhere, feeling that we (the furniture industry) have little or nothing to offer. This program is designed to make available opportunities to young people and at the same time, supply our our organization with good skilled craftsmen and possibly potential Supervisors.

The trainee will be brought into our organization under the direct supervision of the Assistant Supervisor of a particular department. The department will be decided by the trainee's interest and ability, plus the need of the organization. The trainee will be the ultimate responsibility of the department supervisor with the Assistant doing the actual training with assistance from the lead men in that department. Training plans are complete and the program is structured with the eventual goal of starting the trainee upon completion of training, as an Assistant Supervisor. Other areas of responsibility are open such as Priority Scheduling Supervisor, Safety Director, etc.

Our Production Trainees will not be classified as management trainees because our program is flexible enough that if our trainees are not capable of achieving Supervisory level positions, we will have made of them well qualified lead men or operators with no stigma attached because of not reaching that ultimate level. Therefore, this program should not be mistaken by name as a Management Training Program.

Salary	- The trainee will be a non-exempt hourly paid employee with above average starting pay. He will be eligible under our Merit Review System ninety days after employment. He will again be reviewed in ninety days and every six months after the second ninety day period.
Benefits	- The trainee will be elig ble for our group insurance plan which provides Major Medical Coverage for himself and his dependents. We have three paid holidays with two weeks vacation and a bonus paid at each vacation period.
Educational Opportunity	- The trainee, upon graduation from high school, as part of his training program, will be enrolled at Caldwell Community College in the Furniture Production Curriculum. All fees, books, and tuition will also be paid at his regular rate of pay for time spent in school.

APPENDIX O

Drop-out Identification System
and results of 1976 Identification in Caldwell County.

Drop-Out Identification System

CRITERIA - GRADES 4-9

CATEGORY I - Academic Abilities and Achievement

1. History of academic failure and low scholastic achievement. Any student who has been retained and/or who has failed two or more courses and/or who has a D average or below should be flagged for further study.
2. Depressed reading scores. Any student who has an ID from criterion I_1, and has a standardized reading score more than 1.5 grade levels below norms should be given "tentative" identification.
3. Depressed IQ. Any student who exhibits criterion I_1 and I_2 and has a measured IQ from 0-16 percentile should be given "possible" identification.
4. Low academic motivation. By teacher observation, any student who exhibits criterion I_1 and I_2 and/or I_3 and is lax in completing assignments, forgetful of academic obligations, indifferent in doing in-class assignments, inattentive during class discussions, has low achievement scores and/or is unprepared consistently to do classwork, should be given a "probable" identification.

CATEGORY II - School Environment

1. High absentee rate. Any student who can be characterized by any three criteria in Category I and has an absentee rate more than five days per marking period should be given a "probable" identification. Each criterion less than three will reduce the classification one level.
2. Abrasive and self-denying behaviors. Any student who can be

characterized by any three criteria in Category I and consistency is rude, disruptive, clownish, self-deprecating, and/or hostile, should be given a "probable" identification. Any student who shows all characteristics listed so far is "most probable" and should receive immediate attention.

3. Frequent transferring of schools. Any student who can be characterized by any three of the existing six criterion and has a history of attending excessive numbers of different schools should be given a "possible" identification. For each additional criterion that can be applied, the identification classification should be raised one level.

CATEGORY III - Familial

1. Low parental education. Any student who has been classified by the above seven criterion and whose parent(s) have less than an eighth grade education should be reclassified one level higher.
2. Low support to achieve. Any student who has been classified by the seven criterion in categories I and II and whose parent(s) are indifferent to his/her school achievements should be reclassified one level higher. If both familial criterion apply, the reclassification should be two levels higher.

CATEGORY IV - Physical

1. Visual-Motor Problems. Any student who has been classified by the criterion given in Categories I-III and has observed problems in visual-motor coordination such as apparent dyslexia or lack of hand-eye coordination in physical education should be reclassified one level higher.

2. Untreated dental and medical problems. Any student who has been classified by the criterion in Categories I-II and who shows medical and/or dental symptoms that are untreated, including poor nutrition, should be reclassified one level higher. If both physical criterion apply, the reclassification should be two levels higher.

CATEGORY V - Social Relationships

1. Non-participant in school activities. Any student who has been classified by the criterion in Categories I-IV and who has little or no participative activity in the school's extra-curricular program should be reclassified one level higher.
2. Reported delinquent activity. Any student classified by the criterion in Categories I-III and who has been arraigned for delinquent activities such as running away, substance abuse (drugs, alchohol, etc.), assault, breaking and entering, and larceny should be reclassified one level higher. If both social relationship criterion apply, the reclassification should be two levels higher.

CATEGORY VI - Personality Characteristics

1. Low attitude toward school. Any student who has been classified by the criteria in Categories I-IV and who has a low attitude toward school should be reclassified one level higher.
2. Low need to achieve. Any student who has been classified by the criterion in Categories I-IV and who indicates a low need to achievement should be reclassified one level higher. If both personality criteria apply, the reclassification should be two levels higher.
3. Low desire for order and control. Any student who has been classified by the criterion in Categories I-V and who reveals a low desire

for control and orderliness should be reclassified one level higher. If one other personality criterion applies, the reclassification should be moved up two levels. If all three apply, the reclassification should go up three levels.

Drop-Out Identification Teacher Worksheet

SUMMARY SHEET

Student's Name_____ School_____

Age_____ Grade_____ Sex_____ HR_____

Home Address_____

Parent(s) Name_____ Phone_____

Criteria

Category/Criterion	(✓)
I. Academic Abilities & Achievements	
1. Academic Failure/Low GPA - D Average or Below	
2. Low Reading Score - 1.5 Grade Level Below Norms	
3. Low I.Q. - Below 85 or the 16th Percentile	
4. Low Academic Motivation - Inattentive, poor work habits, low ACH scores	
II. School Environment	
1. High Absentee Rate - more than 5 days per marking period	
2. Abrasive Behavior - rude, disruptive, clownish, hostile	
3. Frequent Transfers - more than 4 schools attended	
III. Familial	
1. Low Parent Education - less than 8th grade	
2. Low Support to Achieve - lack of academic support	
IV. Physical	
1. Visual-Motor Problems - hand/eye coordination, dyslexia, etc.	
2. Untreated Medical/Dental - poor health, poor teeth, poor nutrition	
V. Social Relationship	
1. Non-Participant/Extra-Curr. - poor school participation	
2. Delinquent Behavior - arraignment, arrest, conviction	

DIRECTIONS: For each criterion that applies to a particular pupil, place a check (✓) in the appropriate space in the right hand column. The explanations are descriptive and not exclusive. Do not rate a student unless he/she displays at least two (2) of the criterion in Category I, Academic Abilities and Achievement. Return to your principal. Thank-you.

Pages 887 through 906 containing computer printout material for the Drop-Out Identification System was not reproducible and was removed from this document prior to its being submitted to the ERIC Document Reproduction Service.

Caldwell County Schools

Analysis of Drop-Out Identification Results

From

January, 1976 Survey

ANALYSIS OF RESULTS FROM THE

DROP-OUT IDENTIFICATION SYSTEM

1. As suspected, the academic area (I_1-I_4) turned out to be most predictive of drop-out potential. This finding is consistent with the literature and with our own hypothesis.

* 2. The single greatest contributor to drop-out potentiality is an inadequate reading ability. Since schooling is so highly verbal oriented, an inability to read will negatively influence many other manifestations of drop-out potentiality. An unsuccessful reader, by and large, is an inadequate and unsuccessful student.

3. Excessive absenteeism is not a major factor in drop-out potential in Caldwell County. The spread of students identified as excessive in absence increases with age, a factor consistent with the reality that ADA is higher in elementary schools than in secondary or middle schools.

4. As indicated by I_4 (Low Motivation to Achieve), III_2 (Low Home Support for Achievement) and V_1 (Non-participant in extra curriculars) much work needs to be done to strengthen the affective education of Caldwell students. For students who exhibit these characteristics, ways must be found to build their confidence and self-image.

5. Based on the finding in the third area dealing with parental influence, some rather intensive work in parent effectiveness is warranted, particularly for Special Education youngsters.

6. Lack of academic success (and hence drop-out potential) does not manifest itself in abrasive or abusive behavior in all

instances. In fact, less than half as many cases were categorized for abrasive behavior is a sympton, but not a cause of drop-out potential.

7. Physical status seems to be a minor factor in predicting drop-out potential. While the presence of untreated medical and/or dental problems, or the presence of visual-motor difficulties is real to those who possess them, they make up a small portion of the total number identified.

8. It would appear that while no single attendance area has a significatnly more pronounced problem than others, several schools seem to have a significantly higher proportion identified. The county average was 9 per cent. Eleven schools registered percentages above that figure; eight registered below. Five recorded a proportion at 12 per cent or above. I would suggest that if target schools are to be taken, they should be selected in decending order of percentage. This is not to pick on or shame a particular school; it is a recognition of the location of problem concentration.

9. The classification sub-system revealed that as the severity of the categories increased, so did the number of students so classified, ranging from one (flagged) to 442 (near certain). The whole matter of dropout prevention by curricular means needs severe attention.

10. No particular grade level stands out as needing more attention than others. The numbers are pretty consistent.

SUPERINTENDENT'S SUMMARY

A PROPOSAL FOR EVALUATION OF THE GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROGRAM AND FOLLOW-UP STUDY

Submitted to:

Caldwell County Board of Education

by

Appalachian State University
Boone, North Carolina 28608

October 17, 1974

Dr. James W. Jackson, Dean
College of Continuing Education

Dr. Gerald M. Bolick, Director
Division of Community and
Regional Services

Mr. Richard Arnold, Associate
Vice Chancellor for Business Affairs

Dr. Roland L. Tuttle, Jr.,
Evaluator

North Carolina
Caldwell County

This contractual agreement, made and entered into this seventeenth day of October, 1974, and between Caldwell County Board of Education, Lenoir, North Carolina, hereafter referred to as Caldwell County Board and Appalachian State University hereafter referred to as the contracting agency.

Witnesseth:

I. The Caldwell County Board hereby agrees:

a. To provide financial assistance for the cost of performance of this Contractive Agreement not to exceed $4,335.00. The Caldwell County Board agrees to make payment on an actual cost reimbursement basis to the Contracting Agency upon submission of proper documentation of costs incurred in connection with the Evaluation of the Guidance Oriented Alternative Work Experience Project and Follow-Up Study funded under the U. S. Office of Education Grant No. OEG-0-74-8580.

b. To cooperate with Contracting Agency by providing necessary information, records, and coordination for the design development and initiation of the evaluation.

II. The Contracting Agency hereby agrees:

a. To design and conduct an evaluation of the Guidance Oriented Alternative Work Experience Project within the provisions set forth in the U. S. Office of Education Grant award document for Grant Number OEG-0-74-8580, Project number V0180VZ.

b. To evaluate the Guidance Oriented Alternative Work Experience Project utilizing the strategies and evaluation procedures presented on pages 2-8 of the attached proposal.

c. To provide continuous evaluative feedback to the Guidance Oriented Alternative Work Experience Project Staff throughout the period of this contractual agreement which will aid them in the improvement of the project.

d. Appalachian State University agrees to allow access to any books, documents, papers, and records concerning the contract which the Caldwell County Board of Education, the secretary of the U. S. Department of Health, Education, and Welfare, the Controller General of the United States, or any of their duly authorized representatives determines or is pertinent to the specific grant or contract for the purpose of making audit, examination, excerpts, and transcripts.

III. The Caldwell County Board and Contracting Agency hereby mutually agrees:

a. To work cooperatively in planning and conducting the aforesaid evaluation program.

b. That amendments may be made to this contractual agreement during the term of agreement and only by the approval of each and both parties to the Contractual Agreement.

IV. Terms of Agreement:

This Contractual Agreement is entered into the aforementioned date and is effective from the period October 21, 1974, through November 30, 1975.

In the event the Contractor fails or violates the contract terms all reimbursement after that date will end and this contract will become null and void.

In the event the Contractor documents to the satisfaction of the Caldwell County Board of Education that circumstances beyond their control have required them to terminate the contract, then the Caldwell County Board of Education will reimburse the Contractor for documented expenses incurred before the termination date.

Attest:

For the Caldwell County Board of Education:

TOTAL FUNDS REQUESTED:	$4,335.00
TYPE OF PROPOSAL:	New

A PROPOSAL FOR THE EVALUATION OF THE GUIDANCE ORIENTED ALTERNATIVE WORK EXPERIENCE PROJECT

I. Introduction

The proposal is a plan for the third-party evaluation of the Guidance Oriented Alternative Work Experience Project being conducted in the Caldwell County School System. This proposal represents a study of the work experience project as it attempts to find answers to some nation-wide problems in vocational education. The overall goal of the Alternative Program is to search for ways to provide realistic trade training experiences not now provided in public schools and to improve existing trade training programs. The evaluation proposal will measure the level of success achieved in Caldwell County.

II. Overview of Alternative Program

To further understanding of the relationship of this evaluation proposal to the overall project, it is important to note a few basic guidelines of the project.

The official title of the project is The Guidance Oriented Alternative Work Experience Program and Follow-Up Study. The primary purpose of the project is to research a program designed to alleviate and overcome:

(1) Lack of communication between industries, businesses, and the public schools concerning needed changes in vocational-occupational training.

(2) High percentage of students trained in our schools in traditional occupational programs who do not remain on those jobs after graduation.

(3) Lack of adequate placement programs for students.

(4) Lack of a training curriculum developed by industry and public schools in the area of textile and furniture manufacturing for industrial cooperative training programs.

These problems are common to many areas of the nation. The project expects to accomplish the following benefits to deal with the above problems:

(1) Development of comprehensive career guidance programs within the county high schools.

(2) Establish a model county-wide job placement program to serve high school students in Caldwell County.

(3) Development of work experience programs in the area of textile and furniture manufacturing that will reduce requirements for more and more expensive occupational laboratories within our schools.

(4) Development of an individualized curriculum for industrial cooperative training classes.

III. Evaluation Design

Goals and Procedures

The evaluation proposal establishes four objectives to be achieved by the Appalachian State University Third-Party Evaluation Team:

1. To determine the extent to which a comprehensive career guidance Program has been developed within Caldwell County high schools.

The project director will furnish the Appalachian State University Evaluation Team with a detailed summary of the career guidance activities that have occurred as a result of the project from each of the county high schools. A third-party evaluation team of three educators selected by the ASU evaluation team will review this guidance material and judge whether an adequate career guidance program has been implemented. Persons serving on this guidance committee will include the chief consultant of Pupil Personnel Services with the N. C. State Department of Public Instruction along with two persons from the Department of Guidance and Counseling from Appalachian State University.

2. To determine the extent to which a model job placement program has been implemented to serve all high school students within the Caldwell County School System.

The project director will provide the Appalachian State University evaluation team with a detailed log of the placement coordinator's daily activities, detailed list of the number of students served and placements made at each high school, and a detailed guide produced by the project staff covering the implementation of a unit-wide placement service.

The third party guidance team selected by ASU will review the above information and evaluate whether or not a model job placement program has been developed.

3. To determine the extent to which model work experience programs have been established in the areas of textile and furniture manufacturing that will provide both the skill, development, and job climate necessary to achieve and maintain meaningful employment in local industries.

The Appalachian State evaluation team will make a comparative analysis of two groups of students: 1) Regular cooperative and vocational students, and 2) Alternative Work Experience students. A random sample of the regular cooperative training students will be made by the project staff. The project staff will pre- and post-test, using instruments jointly decided on by the project director and the ASU evaluation team, the work experience students as well as the randomly sampled cooperative training students.

A model curriculum guide for Industrial Cooperative Training Programs in the areas of textile and furniture manufacturing will be developed by the project staff and copies given to the evaluation team by October, 1975.

An on-site visitation of the Work Experience Programs will be conducted by an evaluation team before the end of the 1974-75 school year.

The Appalachian State University evaluation team will select two members of the on-site visitation team as well as develop all necessary instruments for recording data. The Caldwell County Board of Education will select the third member of the on-site evaluation team.

4. To determine the extent to which a follow-up study of the work experience students, regular I. C. T. students who were randomly selected in the control groups, and all 1974-1975 high school graduates of Caldwell County Schools has been established in order to determine the success of these people in terms of salary, job mobility, etc.

The project director will make available to the Appalachian State University Evaluation Team before October, 1975, copies of all instruments used in the follow-up study, the number of people who received these instruments, and the results of the follow-up study along with the original instruments that were returned.

General Strategy

Due to limited funding of the project, it is understood that the gathering of survey and other instrumentation data for the evaluation will be the obligation of the local project director and staff unless otherwise stated in the proposal. Further, the Guidance Oriented Alternative Work Experience Project will provide funds for per diem and travel for the on-site evaluation team.

The evaluation instruments for student performance include the Minnesota Vocational Interest Inventory and the Tennessee Self-Concept Scale. The Minnesota Vocational Interest Inventory provides 21 scales for occupations. There are also nine area scales showing the examinee's liking for work activities common to several occupations, such as mechanical and electronics. The items are oriented toward vocational activities, and are presented in a forced-choice triad format.

The Tennessee Self-Concept Scale consists of 100 self-descriptive items to which the examinee responds as to how he sees himself. Fifteen scales will be used in the evaluation. They include: behavior, identity, self-satisfaction; physical, social, personal, family, moral-ethical self-concepts.

These instruments have been selected and approved by both parties. The project will purchase the instruments and assist in the development of new instruments which may be necessary.

The project director will be responsible for publication of copies of the final evaluation report. The Appalachian State University Evaluation team will furnish offset printing mats of the report and in turn be provided a minimum of five copies of the final report within one month after the mats have been provided.

Delineation of Responsibilities

The Guidance Oriented Alternative Work Experience Project director and the Appalachian State University evaluation team director will:

1. Develop a time schedule (for times not specified previously) agreeable to both parties by October 31, 1974.
2. Meet monthly for joint planning and evaluation of progress.
3. All communications related to the project shall be in writing including confirming memoranda of telephone calls.
4. Special meetings related to evaluation may be called by either party (both parties agreeing on need).

5. Establish an orientation for the evaluation process.

6. Select or develop all instruments used in the evaluation of student performance.

The Appalachian State University team will:

1. Assist the project staff in establishing proper experimental and control groups.

2. Compile and analyze data from survey instruments administered by the project staff.

3. Organize and conduct orientation session for the on-site evaluation team who will look at the work experience component of the project.

4. Propose an overall evaluation report based on an analysis of data from survey instruments, from the on-site evaluation team reports, from the project staff's daily logs, from all summaries of activities occurring, and from the curricula guides prepared by the project staff.

5. Furnish mats of the final report to the project staff.

6. Furnish the Caldwell County Board of Education a mid-term report on the evaluation process in the March board meeting.

7. Provide general secretarial assistance and key punch service.

The Project director will:

1. Administer all data collection instruments and deliver to the Appalachian State University Evaluation Team.

2. Make necessary arrangements for the on-site evaluation.

3. Provide the evaluation director with copies of all staff logs, quarterly reports, and curriculum materials produced.

4. Reproduce and distribute the final evaluation report.

IV. Personnel

Coordinator of Evaluation

The coordinator will serve as a consultant (under ASU policy) relating to the management/coordination functions pertaining to the evaluation of the program. He will assume his responsibilities October 21, 1974, and continue in this capacity until November 30, 1975. He will be directly responsible as a consultant to the project staff for research design, analysis of data, report writing, and the on-site evaluation. The coordinator will spend 15 consulting days in this position.

Dr. Roland L. Tuttle, Jr., currently a member of the faculty in Secondary Education at ASU, has agreed to serve in this capacity. Dr. Tuttle has an Ed.D. in curriculum, supervision, and instruction from the University of North Carolina at Chapel Hill. He has experience in research and evaluation, in addition to teaching research, measurement, and statistics. He is the coordinator for research in the College of Education, ASU.

Dr. Tuttle's vita is included as Exhibit A in this proposal.

Programming Consultants

Dr. Patricia E. Gaynor, faculty consultant in the use of the computer, ASU, will program the data for statistical analysis. Dr. Gaynor holds a Ph.D. in educational research from Miami.

Secretarial/Key Punch Assistance

Secretarial assistance and key punch services will be available from the appropriate ASU department as needed and at a cost reflected in the attached budget.

Administration and Coordination

The Division of Community and Regional Services, as a service vehicle of the College of Continuing Education, ASU, will provide administrative and coordinative assistance to the evaluation project. This Division is the liaison with the University and the region it serves.

V. Timetable for Implementation

Monthly meetings for joint planning and evaluation of progress will be held at a time mutually agreeable to all parties.

1974

October 17	Presentation of Evaluation Proposal to Caldwell County Board of Education
October 31	Development of a time schedule for the evaluation

1975

March	Progress report to school board
April	On-site visitation team
May 31	Evaluation Goal 1 Evaluation Goal 2

1975

August 31	Evaluation Goal 4
November 30	Evaluation Goal 3

VI. Budget

The total expenditures are based on a 14-month period at a total cost of $4,335.00, as reflected in the attached budget. Appalachian State University will submit on a periodic basis a statement to the Caldwell County Board of Education a statement of expenses incurred. The statement will indicate expenses as outlined in the attached budget. Justification of these expenses will be on file in the Division of Community and Regional Services, Appalachian State University.

BUDGET

Category	Project Cost By Line Item
Personnel Costs	
Evaluator (15 days, $100 per day)	$1,500.00
Third Party Evaluation Team (three, one day each at $100/day)	300.00
Programming Consultant (two days at $100/day)	200.00
Secretary/Key Punch Operator (100 hours at $3.00/hour)	300.00
Employee Service and Benefits (.16 x applicable personnel costs)	288.00
Travel	
Evaluator	50.00
Third Party Evaluation Team	50.00
Third Party Evaluation Team (Subsistence, one day each at $25/day)	75.00
Supplies and Materials

FOREWORD

Much of the impetus for a broad, locally-based developmental effort in career education has come through Part C, Part D, and Part I of the Vocational Education Amendments of 1968 (Public Law 90-576). Part C provides funds for research and development work in vocational education, including the conduct of experimental and pilot projects. Part D provides funds for the operation of three-year exemplary programs designed to familiarize elementary and secondary school students with the broad range of occupations for which special skills are required and to broaden and improve career preparation programs for students in grades 10 through 14, with attention given to occupational guidance, counseling, and placement. Part I provides funds for the development of curriculums for new and changing occupations, for the coordination of curriculum improvements, and for the dissemination of curriculum materials. These three parts of the Vocational Education Act provide very useful vehicles for the development, in accordance with the intent of Congress, of broadly-conceived career education programs. Although the emphasis under Parts C, D, and I has not been in higher education and adult education, participating school districts are able to articulate their K-14 career education activities with adult education and higher education programs supported from other sources.

In the six-year period which ended on June 30, 1975, $46.5 million from the U.S. Commissioner's discretionary Part D funding were made available to support at least two career education model projects in each State and Territory of the United States. In 1971 and 1972, the U.S. Commissioner of Education elected to turn over to the States an additional $18 million of discretionary Part C funding for the initiation of additional career education projects in each State and Territory. During the same period more than $9 million in Part I funds were used to support curriculum development efforts in the 15 occupational cluster areas suggested by U.S.O.E. as an appropriate organizational structure for the delivery of career education, particularly at the secondary level.

Both the Part C and the Part D career education projects have been viewed as joint local/State/Federal endeavors. Program officers from the Central and Regional Offices of the U.S. Office of Education work jointly with personnel from State Departments of Education in providing technical assistance to the local project staffs. In return, the State and Federal Program Officers are learning much from the practical experience being generated in the local school systems as career development theories are applied in actual classroom settings under a wide variety of environmental conditions. The first of the

cluster curriculum guides, namely, those begun in 1971, are completing their field testing and will become available for wide scale dissemination during the coming year. (Guides will first be available for the Public Service, Manufacturing, Transportation, Construction, and Agribusiness occupational areas.) Others will be disseminated as they are completed, with full dissemination of all 15 clusters anticipated by 1977.

Coordination across the many career education projects, and the interchange of the creative ideas and techniques which are emerging must be provided for, if we are to expedite the developmental process which is underway. The Division of Research and Demonstration now has locally-developed career education model projects in operation in well over 70 local school districts across the country. The problem of providing for cross-fertilization and exchange of ideas among all of these projects is a formidable one. Significant steps have been taken in this direction. The national conference, for which this publication will cover proceedings, is our most recent effort in coordination.

This report summarizes the proceedings of the "National Coordinating Conference for Administrators of Part D and FY 1973 Part C Programs and Projects, funded under P.L. 90-576," which was held at the Royal Coach Motor Inn in Dallas, Texas, on January 28-30, 1975.

The Conference was coordinated and the report prepared by Mrs. Joyce Cook and Miss Jeanne Williams of the Demonstration Branch, Division of Research and Demonstration.

BACKGROUND AND INTRODUCTION

Prior to the Dallas Conference in January 1975, four previous national conferences had been held which concerned themselves with the role of the Vocational Exemplary Projects in the implementation of career education.

Before the initiation of career education activities under Part D of Public Law 90-576, a "National Conference on Exemplary Programs and Projects" was conducted in Atlanta, Georgia. The purpose of this conference, which was held in March of 1969, was to explore potential procedures for implementing Part D career education activities and to develop a conceptual framework for the exemplary projects which would be undertaken.

Shortly after the award of the initial grants under Part D of P.L. 90-576, a "National Institute on Exemplary Projects" was conducted in Squaw Valley, California. The purpose of this Institute, which was held in July of 1970, was to assist newly-appointed State and local directors of Vocational Exemplary Projects to formulate plans for initiating, operating, and evaluating their Part D projects.

The December 1971 coordinating conference, which was held in Columbus, Ohio, involved the local-level directors of Part D projects, the State-level program officers who were involved in the projects, personnel from Ohio State University's school-based model effort, and Federal program officers. It was designed to promote the exchange of information and the sharing of ideas emerging from the projects. The agenda for that conference was specified by Federal program officers and was set up by grade levels, with key project directors being tapped for informal presentations on the achievements of their project by grade-level and program emphasis. Each presentation was followed by a period of time for questions from the audience.

The 1972 conference at Airlie House in Warrenton, Virginia, involved the participation of: (a) State-level personnel who are responsible for the coordination of Part C and Part D career education projects; (b) local project directors of the career education projects supported under Section 142(c) of Part D and Section 131(a) of Part C; and (c) third-party evaluators who are under contract to conduct evaluations of Part C and Part D career education projects. One of the primary

objectives for this "Coordinating Conference" was the exchange of techniques and instructional materials which were showing promise in accomplishing the goals of the Part C and Part D career education projects. Exchange of evaluation techniques and approaches was also an objective. A series of significant events occurred within the Part C and Part D programs in the time between the December 1972 Airlie House Conference and the January 1975 Dallas Conference covered by these proceedings.

The first event was the decentralization of the Part D program in June of 1973 to the U.S. Office of Education Regional Offices in the 10 DHEW Regions. Although the program had always involved a high level of participation by the Regional Officers in technical assistance, in grant selection, and in monitoring the funded projects, they assumed full responsibility for these aspects during the Summer of 1973. Only the policy aspects of the program - namely, priority setting, development of selection criteria, and reporting to Congress on the effectiveness of the program - were retained as Headquarters activities.

The second, more a series of events than a single event, related to the burgeoning career education movement. There resulted, in 1973, a search for high quality curriculum materials that could be disseminated on a broad scale and, at the same time, a search for accountability data to show that the career education projects were achieving the goals they had set out to achieve for young people.

Almost simultaneously, the then Demonstration Branch staff in the Headquarters office in Washington found themselves involved in (1) a search for effective curriculum materials for career education, (2) a contract for the evaluation of the Part D program's first three years of operation, (3) a management audit by the Department of Health, Education, and Welfare, (4) an impact study designed to ferret out the relative effectiveness of U.S.O.E. "change agent" programs, and (5) a program audit by the Government Accounting Office designed to yield information for Congress on the whole career education movement and its implications for new legislation.

The fact became increasingly clear, as the staff officers related to the outside groups looking at the program, that inadequate attention had been paid to the design and content of the third-party evaluations. Very few of the curriculum materials (only two of the first-round Part D projects, in fact) had adequate student outcome data available to prove their effectiveness. Consequently, the vast majority of the materials presented

the reviewers failed to secure the approval of the U.S. Office of Education's Dissemination Review Panel for an intended broad-scale dissemination effort.

Similarly, initial draft reports presented by the evaluators contracted by U.S.O.E.'s Office of Planning Budgeting and Evaluation and by the Government Accounting Office auditors gave advanced warning that the fate of the program would likely be threatened when the final reports were submitted unless immediate action could be demonstrated that the evaluation design and content would be improved. Out of concern both for the Part D program and the implications that evaluation criticism would have for the overall career education movement, the Office of Career Education, under the leadership of Kenneth Hoyt, supported the development of the Handbook for the Evaluation of Career Education Programs. The Part D projects were asked to field-test the Handbook and to participate in its revision.

It was against this backdrop that the January 1975 National Coordinating Conference for Administrators of Part D and FY 1973 Part C Projects and Programs, funded under P.L. 90-576, was convened.

The objectives of the Conference, determined by a Conference Steering Committee together with staff of the U.S. Office of Education, were:

1. To identify and promote effective methods and techniques for moving career education from a project status into an ongoing educational program status.

2. To determine and discuss major issues in the implementation and continuation of career education at the local, State, Regional, and Federal levels.

3. To provide an opportunity for the sharing of methods, techniques, and materials being utilized in the various projects.

4. To promote the improvement of career education evaluation.

5. To share information about the implications of recent and pending legislation for career education and vocational education programs.

While general sessions were devoted to achieving some of the above objectives, the major focus of working groups within the Conference was on achieving the second objective. The issues that received major priority within conference working groups were identified in surveys by the ten U.S. Office of Education Regional Program Officers assigned to administer the program.

Efforts were made to minimize the "show-and-tell" atmosphere that had been characteristic of the prior national coordinating conferences. Participants were asked to register for the Conference with a commitment to the resolution of the issues and problems that surfaced in the survey as being of major importance to practitioners across the Nation in the career education movement, generally, and in the Part D program in Vocational Education, specifically.

Preference for Conference registrations and for hotel reservations was given to the following individuals:

1. State-level administrators of Part D programs under P.L. 90-576.

2. Local Project Directors of Federally-Administered Part D Projects funded under Section 142(c) Part D, P.L. 90-576.

3. Third-party evaluators of Part D, Section 142(c), Projects.

4. Project Directors of fiscal Year 1973 Part C Projects funded under Section 131(a), P.L. 90-576.

While priority was placed on the above individuals, it was possible to accommodate a limited number of other participants such as teacher educators, local school administrators, and members of local project staffs under Part D Projects. Because there were no central funds for underwriting travel, per diem, or stipends for the Conference, these proceedings may be said to reflect the high level of commitment to the career education movement that exists within what is largely a vocational education community.

Special appreciation is due the Conference Steering Committee:

William Cummens

Participants at the Dallas Conference included approximately 46 State-level administrators, 124 local project personnel, 29 evaluators or teacher educators, 12 from other agencies or institutions, 11 U.S. Office of Education Regional Office representatives, and five U.S. Office of Education headquarters representatives.

Joyce Cook
Part D Program Coordinator

CAREER EDUCATION--PROJECTS TO PROGRAM

William F. Pierce

There is an old saying that one ought to believe only about 25 percent of what someone says in introducing a speaker. In dealing with the issue of moving career education from a project status into an ongoing educational program status you probably need a speaker who knows two kinds of things: (a) how to get resources and support for career education and (b) how to administer a program where you actually enroll students. While I have had considerable experience with the former, you have an obvious advantage over me in the area of actual program administration. We will talk about these two areas today, but I will also spend some time this morning sharing some of my perspectives from the national level and some of my opinions about the value of this conference.

I am told that a keynote speaker is charged with setting the theme of the conference, with putting things in their correct perspective, and bringing some balance into the conference program. And it is important that we not get carried away with the missionary zeal we all have for career education without first setting the stage concerning the issues.

Assuming the responbility of a keynote speaker is awesome to me and when I think "awesomeness," I am reminded of a joke about Texas. I believe that you will find it appropriate. Some of you -- particularly that group of you that stood up from the Dallas region -- have probably heard it already. Even I first heard it a long time ago.

It seems that a fellow came to Texas for the first time and went into a bar. Now everything in that bar was enormous. The owners of the bar had planned it that way in keeping with Texas and the bigness of Texas. As the guy walked into the place, he realized that the bar, rather than being at a normal level was very high. He had to look up to the very tall bartender and when he tried to put his foot on the rail he had to raise it way up high, too. He ordered a straight shot which they served him in a great big glass. The guy was terribly impressed with the size of everything. When he decided he would have to go to the men's room, he asked directions from the bartender. The bartender told him, "It's through that door, and to the left." He had no more than closed the door good when the bartender remembered that the light was not on and that he had forgotten to caution the guy about the swimming pool. He ran out, switched on the light, and found the visitor floundering around in the swimming pool. The visitor yelled, "Don't flush it! Don't flush it!"

This says something about the awesomeness of Texas and, at the same time, about how I feel about my responsibilities as your keynote speaker.

In preparing for this keynote address, I read a summary of the issues you raised with our staff in response to their pre-conference survey. Those issues--generally in the form of questions--were, in my opinion, outstanding, just excellent. After I read them I had three reactions.

First, I wish I knew someone, even a combination of people, who could answer all of those questions you raised about career education. If we could answer all those questions, the problems of career eudcation would be solved, and we could turn our attention to the energy crisis or whatever else we should be concerned about. We would have resolved all the things that bother you and that bother us. The concerns that we have for moving career education from a project to an accepted program extend past you to all the teachers who worry about providing appropriate educational experiences for every young person and every adult in our society.

My second reaction is that you must not look to us at the federal level or to any individual to answer those questions, but that you look to yourselves for the answers.

And third, after reading the questions, it seemed that perhaps one of the best ways in which to launch this conference would be to spend just a few minutes trying to put your projects and the career education movement in their proper historical perspective. It seemed to me that in that process some of the questions you raised might be answered.

I will try to show this morning that, many of the Office of Education's previous activities and previous efforts have been not only to help shape, form, and mold the evolving career education movement, but also to help move it from a project here and a project there over to all the kids and adults in all the 17 thousand school districts, in all the 12 hundred community colleges, and in all the universities in the country.

And, in winding up, I propose to stress some of those issues that we think are terribly important to the future of career education and to lay a base of inquiry for the remainder of the conference.

Let me spend some time putting career education, the Part D projects, and the Part C projects in an historical perspective that I think will be helpful to you.

On October 2, 1969, a policy paper was issued by the U. S. Office of Education that started the first cycle of Part D projects. That policy paper stressed five particular aspects which were required of

each project:

1. To provide broad occupational orientation at the elementary and secondary levels;

2. To provide for work experience and cooperative education programs;

3. To provide students not previously enrolled in vocational education some very quick and intensive skill training just as they left the system;

4. To provide for intensive occupational guidance and counseling during the last years of school and for initial placement; and

5. To provide for the grantee or contractor to carry out the program with support from regular funding sources after the termination of the federal assistance under Part D.

This was the U. S. Office of Education's first thrust under Part D. It was launched before Sidney Marland made his speech here in Texas that coined the term, "career education." So the movement toward accomplishing some of the goals of career education was begun under Part D before the career education movement that we talk about now was ever begun. Obviously, the fit between those first Part D projects and the career education movement as it has evolved was not perfect although, admittedly, some of the goals were and are the same.

Some months after the Sidney Marland speech, in Fiscal Year 1972, the decision was made to use all of the Commissioner's Part C research money for additional career education programs. At this point we see vocational education research money pulled in for accomplishing some specific purposes in guiding the direction of the career education movement.

In August of 1972 the second major policy paper was issued by the U. S. Office of Education for the Part D program. This was the statement of policy that brought most of you into the career education movement--the one that created your projects. This policy paper no longer talked about cooperative vocational education, work experience, and intensive vocational training. It listed emphases such as awareness at the elementary level, exploration at the junior high level, and preparation at the senior high level. Between the first policy paper for Part D in 1969 and the second policy paper in 1972 a major shift is obvious. There was a shift in commitment and a concern was expressed with how you carry out career education at the various levels. Your projects, then, moved closer into the mainstream of the career education movement. And, because of that shift, you have a different role and responsibility in career education than did the original project coordinators.

The Education Amendments of 1972 brought about changes in our structure that had a great deal of impact on what you are trying to do.

First of all there was a budget request for federal dollars for career education, not Part D vocational education money, but money specifically allocated for career education. Of course, money did not come through at that time but, at least, the movement had been recognized in a legislative and in a budgetary sense.

Second, the National Institute of Education was created with the passage of these Amendments and the four major career education models that the Office of Education had started were moved over as a responsibility of the newly-created education research agency.

Third, the Bureau of Occupational and Adult Education was created and I, personally, joined the Office of Education as the Deputy Commissioner called for in the 1972 Amendments. Prior to my arrival in the U. S. Office of Education Sidney Marland had, after careful deliberation, determined that the administrative responsibility for the fledgling career education program would be housed in the Bureau of Occupational and Adult Education. Not everyone agreed with the decision, of course. Many of us were afraid that this administrative location for the career education program would be confusing to the field and that many people would say "Ah Hah! It is just another name for vocational education." Why else would it be housed in the same Bureau, the Bureau of Occupational and Adult Education? For really good reasons, nonetheless, Sid Marland and others decided that the Bureau of Occupational and Adult Education was the right place for the career education program during its fledgling years of development.

When we put together the new Bureau of Occupational and Adult Education, we had the opportunity to take in the Education Professions Development Act programs. This made a lot of sense to me. Taking those programs that dealt with personnel development and assigning them to the office responsible for career education would permit, as far as legally possible, a shift of those programs over to the development of personnel for career education.

Kenneth Hoyt joined the Office of Education about a year ago while the career education program was still a part of the Bureau of Occupational and Adult Education. We went to Dr. Hoyt because we needed help in determining what was needed in the field and what the career education practitioners wanted. Also, we felt that we needed someone with a missionary zeal--someone who could go out and "turn on" the hardest-hearted administrator or the hardest-headed board of education member to career education.

Finally, in our historical sequence, we come to the Education Amendments of 1974 when the Hathaway Amendment determined the need for specific career education legislation.

That Amendment stipulated that the Director of Career Education would report directly to the Commissioner of Education. The result of that is that we are now in the process of moving the Division of Career Education and Ken Hoyt's staff from my administrative control in the Bureau of Occupational and Adult Education over to report directly to the Commissioner of Education.

Hathaway's reasoning was that if career education is, indeed, more than vocational education and if it does cut across all of education, then it should not be housed in the Bureau of Occupational and Adult Education. In a sense, then Hathaway reversed the decision that had been made by Commissioner Marland two years ago.

I think that a few words about this particular administrative change process are in order. The move of the Career Education Program out of the Bureau of Occupational and Adult Education is an administrative convenience to accomplish what the Act requires. What it does not do is diminish the commitment that both Ken Hoyt and I have to bringing about a career education program in this nation. It does not diminish my job as Deputy Commissioner of Occupational and Adult Education, it does not diminish my commitment to career education, and it does not diminish my feeling that there are times when it is quite appropriate to use vocational education funds to support the evolution of career education.

Someone raised this as an issue in the pre-conference survey. They were worried about whether it was appropriate to use vocational education money for career education. Frankly, if it had not been for the use of vocational education money, we would not be where we are today in career education. In the Vocational Education Act of 1963 and in the Amendments to that Act in 1968, Congress laid the foundation and the framework for career education. Those pieces of legislation were written by people who were beginning to worry about the delivery system of education. They were convinced that education was not really doing for young people what it should be doing. So they gave us legislative authority that was far broader than most vocational educators had ever perceived to be the responsibility of vocational education--legislative authority that was broad enough, in fact, to permit us to launch and to continue supporting career education kinds of activities.

The preceding chronology has brought us up to today in the history of the Part D program and its relationship to the career education movement. We have traced the movement from the Congressional commitment to improving education that was evidenced in the 1968 Amendments to the Vocational Education Act through the passage of the career education provisions in the Education Amendments of 1974 that created the Office of Career Education in the U. S. Office of Education.

And now, due to the federal and State emphasis on career education and due to the fantastic local response, we have federally-funded projects,

we have State-funded projects, and we have many locally funded projects. We have State-mandated career education legislation in a number of States and we have States that are providing career education money in their budgets. We have a State Coordinator of Career Education in every State in the Union, a special committee on career education with the Chief State School Officers, special federal funding for career education and, thanks to Kenneth Hoyt, we have an Office of Education policy paper that outlines and describes the concepts behind career education that you helped to put together. That is how we got from those initial Part D projects to where we are today.

Lets take a look now at some of the U. S. Office of Education's previous activities through which we have attempted to guide the career education movement and through which we have been and are attempting to move it over into an ongoing educational program for all the youths and adults of our society.

First of all, we can say that we have had some experience in attempting to secure resources and support for you and for ourselves in our career education efforts. As I mentioned previously, federal funds were first requested for career education (as a specific line item) through the Education Amendments of 1972. But money was not to be forthcoming for some time. In the intervening years between then and now we were concerned that the perception in the field might be that career education would be permitted to die, particularly after Dr. Marland, career education's greatest spokesman, at that time, left the U. S. Office of Education.

And so, we found what money we could from whatever source--from vocational education, from the Office of Planning, Budgeting, and Evaluation, and from our salary and expense money--to continue at least a minimum level of activity.

We continued to attempt to get a career education appropriation from the Congress and we testified mightily each time. We lost the funds twice. On the second time around the funds were actually there at one point, but we discovered that the Congress giveth and the Congress taketh away. Before we knew what was happening the funds had disappeared from the appropriations bill.

One group that we kept hearing from in the field, not from practitioners like yourselves who were involved in federal projects, but from other teachers was "How can we get involved?" We couldn't tell them to get involved by simply doing better the things a lot of teachers had done for a long time.

Secondly, one of the things that I thought was needed was to get an assessment of what existed in the field and then make available the best of the curriculum materials that had been developed to anybody in the country that wanted to use them. For this particular activity we found a little money in the vocational education budget and used it to

make an assessment of the materials that were available for career education. What we found was not really surprising. We found that there were very few good materials. Particularly scarce were materials for which positive evidence of effectiveness existed.

One of the outgrowths of this effort, however, was an assessment instrument which we will be able to make available to you very shortly within a booklet designed to help you judge your own curriculum products. Then if your curriculum products aren't scoring as high as you feel they should, you can go and hide them someplace and no one will know the difference. Sometimes we get enamored with things we do ourselves purely because we did them ourselves. But when we begin to lay them out against a set of criteria, it may appear evident that it just doesn't make any difference whether we use them or whether we use what we have used historically. And if it does not make a difference, then I submit that neither you nor we need to be in the career education business.

Back in 1973 the Office of Planning, Budgeting, and Evaluation made available about a quarter of a million dollars for the purpose of evaluating the first cycle of Part D projects. When they are available, the results of that evaluation study will help you and me to create a better career education program in the schools.

And one of the things that I want to stress with you today is that we cannot survive much longer purely on our personal zeal for career education. We must show that it makes a difference with kids because the dollars are getting harder to get and the administrators are worried about accountability. We are going to have to be concerned about accountability, as well, in career education.

One of the things that we did in an effort to improve our accountability and, therefore, our position in justifying funds for career education was to contract with Development Associates, Inc. for the Handbook for the Evaluation of Career Education Programs. This was accomplished through salary and expense money made available to us from other parts of the U. S. Office of Education by the new Commissioner of Education, Terrel Bell.

We have tried to look across your final reports and your third party evaluations so that we can share the results with you and with the Congress in our budget justifications. Your evaluations are too diverse to permit that. There is no systematic way of looking at results and we are convinced, after reading the reports and the evaluation results, that you have no systematic way of looking at your own results. We have a very hard time asking Congress for 20 million dollars or 50 million dollars for career education because they invariably ask, "What evidence do you have to show us that it really makes a difference?"

We have furnished you the first draft of that evaluation document and we want you to know that we are committed to using it. We are going

to ask you, the third-party evaluators, to use this document in evaluating the Part D projects. I don't believe that anyone is totally satisfied with the handbook. We are not satisfied with it. What we need is the benefit of your experience in using it so that it can be revised into the best possible document that gives you the kind of help you need.

Ladies and gentlemen, we have to get tough-minded about our evaluation of career education! Some people are saying that "if you leave career education alone, it will go away." But if you can show that career education makes a difference for students, there is no way that career education is going "to go away." There will be no way to stop the good things that are happening to young people in your projects.

But your ability and our ability to move career education into the mainstream as an ongoing educational program is going to depend on our ability to find systematic way of evaluating it and on our ability to show a positive difference for young people.

After Kenneth Hoyt joined our staff, he began his series of mini-conferences that were designed to do three things. First, we wanted input from the field into our third generation funding strategy. Our first two strategies hadn't worked too well and it was time to look at funding again. Secondly, we wanted to develop a concept paper which could ultimately result in a U.S.O.E. policy statement. And, finally, we wanted to begin to try to define career education.

Now that these activities have been accomplished, I am sure that Ken would suggest that there are things that ought to be happening in your projects that perhaps are not happening. But you have been, in some ways, limited by the scope of our imagination when we wrote that second policy paper back in 1972. We have represented, in this room, however, the principal career education projects in the nation. And the major issue is, how do they move from projects to programs? There are a couple of things that I think we ought to try to deal with.

Let's talk about money first. You will say that we have to have more money. Let me just give you a perception of what we are going to have and what we are not going to have. What we are not going to have is a lot of federal money for career education at least in the next few years. We are not going to have a lot of federal money for any kind of education in the next few years given the status of our economy. The economy is down, and career education is still evolving; therefore, people do not want the federal level to put much money into career education because they are really not sure what we mean by it. We do not have adequate evaluation. There is even the question of who will make the decisions about federal money. There are some basic questions about the appropriateness of a federal role in education. There is absolutely no constitutional necessity for the federal government to be involved at all in any kind of education. The constitutional responsibility for all education rests with the State constitution.

There are people at the federal level who are concerned about what the appropriate role of the federal government in education should be in the future. All of these things, in my mind, impinge upon our getting great amounts of money for career education.

All I am saying to you is that you ought not to expect large amounts of money. What we are going to have to do is continue as we are with small amounts of seed money. This will have to help you move from where you are to where you want to be in more locations around the country. You are going to have to continue to stress the need for local and State funds. You are going to have to take pages out of books of people from other States that have been successful in getting State money, so you can go back and try to find ways to get your own State legislators to make that kind of commitment. You are going to have to find ways to get local money allocated to career education. You are not going to get two billion dollars from federal money for career education in the forseeable future.

The second issue that I think we really ought to stress in this conference is the need for teachers, on every level, committed to education. Last night we were talking to some people about how hard it is to turn certain teachers on--how to get them to be aware that career education is around. And once they are aware, how hard it is to get them to make that personal commitment to get involved. I think in this conference, "How to get those teachers committed" should be a major stress. What are the strategies? What really works? What does not work? One of the things that should help is that we have tried to save and have been successful in saving the Education Professions Development Act. We are going to have monies available under that Act that we can use for career education personnel development. I thought the Act was going to be allowed to expire and we would not even have the opportunity to ask for additional resources. We will have the Act, but how much money we will get, I cannot say at this time.

If we do get money, I think we need to know from you, do we spend it for inservice training or preservice training? My feeling is that inservice is where it has to be. We have so many people in the schools who are going to continue to operate just as they have always operated if we do not work with them. The number of teachers coming out of preservice is really insignificant compared with the number already in the classroom. We must concern ourselves about quality preservice and inservice education.

We ought to concern ourselves about your responsibility to spread career education in your communities and in your States. How do we make you legitimate and logical arms of the Office of Education to help us to carry out our responsibilities at the federal level? We are going to need better dissemination strategies. You are doing a lot of things that you cannot share. There is no way that you can really share them with others the way you should. I think others in this room are doing

things that they would like to share with you and that you would like to have. Putting them out on the table once a year is not an adequate and appropriate dissemination strategy. We have to have a better way to get to you the materials, the techniques, the things that work, and the awareness of things that do not work.

I am about out of time, but let me very quickly tick through some of the things that you identified in your conference survey that we certainly concur with and that need to be stressed. The roles of the coordinator and the counselor are not well-defined. The counselor really does not know what his or her role is in career education. You must think this through, and if anybody can help you do that, it will be Ken Hoyt with his perspective of the counseling field and its relationship to career education.

We have to get involved in career education at the secondary level. It is very appropriate that one of your work groups is going to consider how to get career education installed at the secondary school level. We must consider, at the same time, our post-secondary programs. If career education really is what we say it is, if it really is part of the educational game, then we had better start worrying about the post-secondary level as well.

The federal level, with limited funds, can only provide funds that are catalytic. We can only provide them to you so that they grease the squeaky wheel. They should go to where the friction points are. They should begin to answer some of the questions that we do not have answers for now: Questions like, "Is there a difference between career education and career education for disadvantaged kids?" "Are there different things that you have to do to make career education programs work?" If that is the case, our role at the federal level is to provide resources to help you answer some of those questions.

We will soon break into work groups. If I am right about what I say, you are where it is going to happen and you are going to be the people that really make this conference go. You should be anxious to get started and go to work on the issues.

Let me share with you a thought you can take with you as you worry about career education. We ought to "worry about" it, because to many, career education is one of the things that is going to help salvage a lot of kids in this country who are not now being salvaged. I do not think we can let it die a natural death. I do not think we can continue to let people snipe at it. I do not think we can continue to go with unanswered questions; therefore, I think the use of the term "worry about" is an appropriate choice. Let me share with you the thoughts of Lewis Carroll, I have used it before, and some of you may have heard it. In a piece called the Hunting of the Snark he said, "The valley grew low and narrower still, and the evening grew darker and

colder, til out of nervousness and not from good will, they marched along shoulder to shoulder." I would rather we would march along, in the development of career education with the other teachers and the other people that you have to work with to move it from project to program, out of good will. But if we cannot have it that way, then let us make them nervous as hell so they march along with us as we take this thing from where it is to where it ought to be.

Vocational Association

Sidney C. High, Jr., Director
Division of Career Education Programs
U.S. Office of Education

Title IX of the Education Amendments of 1972
and Title IV of the Education Amendments
of 1974, Section 406 and Section 408.

CAREER EDUCATION AND WOMEN

Joan Duval

Thanks for the introduction. I might say, you're a tremendous ego builder. Let's start with a little riddle. A father was driving his son to the airport and they had an automobile accident. The father was killed and the son was taken to the hospital. Upon seeing the patient the doctor said, "Oh my God, it's my son." Have you figured it out? Just a few facts.

According to the 1970 Department of Labor census, women comprise more than one-third of the national labor force. However, they're concentrated in a relatively small number of occupations. It's also projected that 90 percent of all women work at some time during their lifetime. Roughly, 40 percent of all married women work. We could go on and on, but that's not the point of this session. These facts should communicate to you the concerns that the Women's Program Staff in the Office of Education and women across the country have with the direction that career education takes as well as vocational education. Recent federal legislation that will impact on career education as it applies to women is contained in three specific laws or acts. These acts include Title IX of the Education Amendments of 1972; Title IV of the Education Amendments of 1974, Section 406, Career Education; and Section 408, Women's Education Equity Act.

I would like to spend a few minutes on each one. Title IX of the Education Amendments of 1972 is the prohibition of sex discrimination. And just a short quote in terms of the thrust, "No person in the United States shall on the basis of sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance." The law then proceeds to note several exemptions. These exemptions do not include Vocational Education, Professional Education, Graduate Higher Education, or Education in Public Undergraduate Schools. Provisional Regulations for Title IX were published in June of 1974, two years after the enactment of the legislation. The comment period was extended for many reasons and it closed on October 15, 1974. Seven hundred comments were received and reviewed by the Office of Civil

Rights and the Office of Education. The regulations have now been written in final form, and they will be sent to the President. When the President signs the regulations they will be published in the Federal Register and simultaneously sent to Congress for review. As you are aware, the Education Amendments of 1974 mandated that all regulations must be reviewed by Congress. Forty-five days after that, providing the Congress does not amend the law itself, the regulations will become law.

What are some of the implications of Title IX for career education? Career Education programs and career options cannot be limited to one sex, designed by one sex, or administered by one sex. That would be prohibited. The sex specific nature of most vocational education programs will require considerable changing as it is merged into career education. Changes in attitudes, sex-role expectations, staffing patterns, resource allocation, are just a few areas that will be subject to change. Affirmative efforts may have to be developed that permit the formally excluded sex, one or the other, to develop basic competencies and skills that are necessary to enter into programs. Positive steps will have to be initiated to gain parent and community understanding and support for eliminating career stereotypes. Education personnel will have to receive training in a wide variety of areas, not the least of which is training in terms of recognizing their own behavior patterns, their own perceptions, and their own projections as they influence the young child in terms of career options.

Hidden curriculum is as important a formative agent as the explicit curriculum. Curriculum and instructional materials should be examined for stereotyping by sex, and the developing of new materials should eliminate sex-role stereotyping. I took a moment after the morning session to look at some of the materials. Some that are on display obviously have been developed with a conscious attempt to eliminate stereotyping and to confront the issue of women in the world of work. I do ask you, as you develop new materials and programs in career education, to be extremely careful of the stereotyping nature of pictures, examples, phrases, etc. Guidance and counseling policies, practices, and the instruments that they utilize continue to reinforce the sex-roles socialization, and therefore, limit career options for both boys and girls. As Bill Pierce indicated in the key-note speech, career education must look at the role of the counselor and this is doubly true when we now add the male-female dimension.

Title IX is not a funded statute. Many people are under the impression that they can receive funds by applying to Title IX to help them change practices, procedures, staffing patterns in their school systems. There are no funds in Title IX. It is an anti-discrimination statute. This means that schools and post-secondary systems must carry the major responsibility in bringing about the changes needed for compliance.

Title IV of the Education Amendments of 1974 contain two sections that are relevant to education equity for women. Section 408, the Women's Educational Equity Act of 1974, is specifically designed to support programs that will open options for women and eventually bring about changes with equalized opportunities. The scope of the act is extremely broad, specifying research and development, evaluation, testing, educational program development, counseling, athletics, career education, vocational education, educational administration, and programs for unemployed and underemployed women. Eligible recipients of grants or contracts are equally as broad. Public agencies are

eligible and not limited to public educational agencies. It is highly conceivable that a public welfare agency would submit under WEEA a program designed or focusing upon underemployed women. Private nonprofit organizations and individuals are also eligible applicants. I believe, and we're trying to check this out, that this is the only piece of legislation issued by the Office of Education that includes individuals as recipients. In fact, there is a special provision for what we are calling mini-grants, grants not to exceed $15,000 for individuals. The act is also broad in terms of the educational levels. It can address issues in the area of women's equity ranging from preschool to adult. This act also mandates a Presidential Advisory Committee and specifies its functions. But we won't go into that except to say the committee has not been appointed at this time. To echo Bill Pierce's statement, relative to the economy and its effects on educational appropriations, it is highly unlikely that the authorized level, $30 million will be appropriated. In fact, I would bet anything on that. However, we are optimistic that there will be an FY'76 appropriation. Women's Educational Equity Act is the program support side of the equity coin and Title IX is the prohibition against inequity. WEEA itself is not sufficient. Equity must be mainstreamed. You know, we started a number of years ago mainstreaming special education in the regular curriculum. The States passed laws on mainstreaming. We have to mainstream this effort also. Every Office of Education supported project must assume leadership in this area.

Now I would like to turn to Section 406 which is of particular interest to you. The legislation is very specific in terms of the will of Congress, not its intent, on the issue of sex in career education. I would like to quote a few lines from your Act. Section 406, (a)(1): "Every child," and I'm omitting things here, "should be prepared for gainful or maximum employment according to his or her ability." Three under that same Section, "Each State and local education agency should carry out a program of career education which provides every child the widest variety of career education options which are designed to prepare each child," emphasis mine, "for maximum employment and participation in our society, according to his or her ability." The purposes in A above are to be achieve by, and this is (b)(3), assessing the status of career education programs and practices, including a reassessment on the stereotyping of career opportunities by race or by sex," and (6), "developing local plans for implementing career education programs designed to insure that every child," etc. "according to his or her ability."

There were a couple of provisions that I focused on that were in reference to not only employment but maximum employment. Women, traditionally, have been channeled, encouraged, unconsciously or consciously -- we are not pointing fingers here -- but the fact remains that they have been encouraged and identified with the lower paying positions in our society. Not only have they been encouraged to engage in the lower paying professions and occupations side-by-side with men, they had, until the equal pay act, received less pay for the same work. I think that it's quite significant that not only employment is referred to in this legislation, but maximum employment. The implications of 406 we really do not have to talk about, since the law is explicit and the program is still in its infancy. Faith in the commitment of Congress to career education has been affirmed in your minds when Dr. Pierce said this morning that his faith in it was confirmed by the creation of an Office of Career Education that reports directly to the Commissioner of Education. My faith in the commitment of

Congress to equal opportunity for all children irrespective of race or sex is confirmed by the explicitness of the career education section.

Finally, we have looked only at federal legislation. Education is constitutionally the business of the State. Each of you should be alert to State laws that decide to eliminate sex discrimination in education. The past two years have witnessed a growing trend for the passage of State laws covering school curriculum issues. These laws range from general comprehension laws prohibiting discrimination in education -- for example, Massachusetts and New Jersey -- to more specific laws requiring the inclusion of minority and women's history and contributions in the school curriculum, such as in California. The development of "survival courses" combining home economics and shop courses in Massachusetts is another example, the competitive basketball opportunities for girls in Kentucky -- I'm just naming a few. State laws are more readily enforceable and State enforcement agencies are more readily available for compliance. Schools and educational decisionmakers must take sex discrimination and sex stereotyping seriously.

PROPOSED LEGISLATION FOR VOCATIONAL EDUCATION AND THE EDUCATION PROFESSIONS DEVELOPMENT ACT

William F. Pierce

One thing that Joan Duval said, in terms of Career Education as it pertains to sex-role stereotyping, is that it must maximize the options of people. This is one of your responsibilities. Career education must let people determine what it is they can carry out--and want to carry out in society--and what they most appropriately can accomplish given their own abilities, their own attitudes, and their own aptitudes. You fail as career educators if you do not maximize those opportunities for young girls as you do for young men.

I think you have two responsibilities--one, to do that job as a part of your responsibility in career education and, two, to help vocational educators to understand that they are indeed guilty of continuing to perpetuate sex-role stereotyping in this country. This is sometimes inadvertent, and mostly unintentional. And historically women who were trained in particular occupations could not get employed if you wanted to get them employed. But the employment picture is changing now. You have a responsibility to help vocational educators to overcome this with fact. As you move to incorporate vocational education as an integral part of the total career education concept, I think you have a role to play with respect to opportunities for women. You must help vocational educators understand what it is they have to do for women in that part of the program which deals with preparation.

I have a daughter who is five years old. I get a little tired of her being inadvertently told that she cannot do certain things in our society. In specific kinds of ways it limits her perception of herself. Recently I was home talking to her and she said she wanted to be a nurse. I said why didn't she want to be a doctor. She said girls are nurses and boys are doctors. I came unglued and I ranted and raved and told her that she could be anything she wanted to be. As a matter of fact, I told her she could be a truck driver if she wanted to. For the next two or three weeks whenever we talked about what she wanted to do, she was always going to be a truck driver. One day she came to me and said, "Daddy, I'm sorry. I don't want to be a truck driver, I want to be a cowboy girl." That is appropriate. And I give her that she wants to be a girl and nobody wants to take away from females that fact that they are going to continue to be girls. I thought, "What do you call it if you do not call it a cowboy?" A cow-person does not sound very good. I want her to be a cowboy if that is what she wants to be, whatever her job. I think that is the rule and that you really have quite a responsibility achieving it.

Let me talk now about vocational education legislation. There are two pieces of proposed legislation that pertain to career education and we need to look at how they will include career education and what their impact might be. For the last two months we have been trying to develop an Administration bill that will be our version of what the new vocational education legislation ought to look like. The Vocational Education Amendments of 1968 will expire at the end of this year and we will, therefore, need new vocational education legislation. Now the legislation can take a number of forms. It can be a simple extension of what is already there, or it can take some minor adjustments of what's there. It can take the form of the bill that has been introduced by the American Personnel and Guidance Association, which has a heavy counseling and guidance influence and puts that into a new perspective in vocational education. It could take the form of the bill introduced by the American Association of Community and Junior Colleges which deals more specifically with greater impact and emphasis on post-secondary. Or it can take some other form. We have been developing an Administration position, a vocational education bill that will be our version of what that final legislation ought to look like.

What is going to happen in the practical realities of the Washington scene is that Congress and people who work for congressional leaders will take all of those inputs. They will take into consideration the good parts of all the bills and come up with a piece of legislation. The legislation will have in it certain parts of all the bills and I did not mention the other bill, which is the American Vocational Association's bill.

One of the things that we did in developing and preparing the Administration's vocational education legislation was to talk long and hard about what should be said in vocational education legislation about career education. Should we try to have a section or a title of the Act that dealt with career education? Should we continue some of the things that we are already doing? Should we continue to allow people on the State and local levels to use vocational education funds for prevocational kinds of activities?

We finally decided that because of the confusion, because people still don't understand the difference in vocational education and career education, because we already have legislation in Section 406 that provides for career education and that makes it clear and distinct from vocational education, we recommended in this legislation to the Congress that they not mix the two--that they not have vocational education funding and career education funding in the same piece of legislation. That is going to be the position that we will take forward to Congress. We will have included in that vocational education legislation those things that have always been permissible under the vocational education legislation and will continue to be permissible, such as using Part B programs and Part B funds for prevocational types of activities.

We will continue to strengthen the business of our industrial arts programs and in many ways those are the exploratory parts of career education. In themselves, they are not--but they certainly have contributed to it.

The vocational education research funds have been retained. The purposes for which the funds could be used in Part C, Part D, and Part I have been retained. Although we are doing away with Part C, Part D, and Part I as separate parts, the activities have been retained. We are saying "Hey, let's worry about what the needs are and let's not let the level of funding limit our activity in a particular area." We need more curriculum development and we do not need to be limited to the four million dollars Congress has given us annually for curriculum development. We can, under the proposed legislation, use as much as is made available of the total amount for research and demonstration and curriculum as we want to. All of those provisions have been retained.

The opportunity to have Part D demonstration programs that are indeed delivering career education activities has been retained. So the bill has not been changed in any significant way. And again, we have not said that vocational education ought to have a separate title for career education or recommended to Congress that they put five million dollars in it. We reached this decision together with Ken Hoyt who is working very closely with us, and our sense was that Congress could not deal with that. They could not deal with Section 406 and vocational education legislation that had money in it for career education as well. So we backed off.

The other piece of legislation that I think you need to be aware of, that has an implication for career education, is the Higher Education Act that also expires this year. It is being reviewed by Congress and will be either repassed as an extension or with certain kinds of revisions. Title Five of the Act represents the Education Professions Development Act portions. We have recommended, and HEW has accepted the recommendation, that the principal activities allowed under the legislation be retained. The exception was that we removed all those activities that simply provided more teachers of an unspecified kind that tends to perpetuate the problem of a teacher surplus. This was one of the things that Congress was worried about. We have an Act now that continues to crank out more teachers in areas like history and English where they cannot find employment. We removed that authorization but we have tried to retain in it activities that deal with quality and the improvement of teachers through inservice. Therefore, it will allow us to spend those monies, if you get beyond the authorization stage, for career education.

We will be working very closely with Ken Hoyt as he develops the whole career education thrust of the Office of Education. One of the reasons that he is going to work out of the Commissioner's Office is that he can go to all of the Deputy Commissioners and all of the other parts of the Office of Education and tap them to contribute to the whole career education effort. Certainly, I hope he does not have to tap us. I hope he does not feel he is tapping us, and that by the way we organize, he feels we are in the same program. It is really not a matter of tapping the EPDA program. In some of the others it is kind of a tap, like pulling some of the people kicking and screaming into the 20th century in our career education efforts. In our case, I do not think you're going to have to drag us, particularly if I continue to have a responsibility for the EPDA program.

Those are the two legislative packages that we have responsibility for. As indicated to you in your program, we are going to have an hour to talk specifically about the vocational education legislation and I will be happy to go into more detail about what it looks like at that time.

PROPOSED LEGISLATION FOR VOCATIONAL EDUCATION

Victor Van Hook

While listening to some of the remarks here, I was recalling that I have had a difficult problem over the past 24 hours. I was in Washington, my car was in Tulsa, my wife was in Stillwater, and this meeting was in Dallas. And through some hectic scrambling around, I picked the car up in Tulsa, went to Stillwater, said hello to my wife, changed the contents of the suitcase, and drove down this morning. You will have to excuse the informal attire since this is my traveling costume.

I live in an all-female household and I have for a considerable period of time. I am a strong supporter of this being a two-way street. When we built our home, we built three bathrooms. There are three females and I have a standard position at each one of the bathrooms. I am second in any one of the bathrooms that I care to use. When we get up in the mornings, I wait until one of them appears to be vacated and at that point in time, I can move in.

I am very much in sympathy with women. I am in the area of business in vocational education and that is predominantly a female field. They are a little suspicious of me at times. We have a mid-winter conference this Friday and Saturday -- if any of you would care to visit with our eight men and some 110 women. We men have our difficulties in getting activities passed in that particular group. It is an interesting group, though, and I would not trade places with anyone.

With reference to the legislation that is pending at this present point, I think we ought to give credit where credit is due. I think many of the results in these different pieces of legislation came about out of initial inputs from the Office of Education, and especially Dr. Pierce's office. He has been an extremely cooperative individual in working with all of the different groups that are interested in this particular piece of legislation. We in the American Vocational Association felt somewhat obligated to address ourselves to the question of the legislation since no panel of consultants was appointed -- as had been done in the two previous pieces of legislation.

As a result, AVA brought together a gentleman named Mal Barlow, with whom I am sure all of you are acquainted, and myself to try to get a feeling from the constituency in the field as to what should be incorporated into the legislation. One of the things that appeared to keep cropping up was this question, "Is the AVA going to be derelict in its duty if it does not address itself to the question of career education?" As a result we tried to identify ways in which this question might be addressed. I do not know how many of you might have seen copies of HR-17304 which was introduced during the last session. There was no guarantee that this would become a real piece of legislation for two reasons:

1. It was introduced late in the session.
2. The Congress was much more concerned with a number of other questions than they were with education legislation that still had several months to run.

We did introduce a piece of legislation that addressed itself to a number of different issues with the hope that interested persons would get copies of it, look at it, decide what needed to be done to improve it, and make recommendations for change. We had a meeting last Thursday, in Washington, at which time we had some inputs from a number of different groups. Hopefully there will be a new piece of legislation that will be introduced some time during the next two to four weeks.

I think the best way to acquaint you with what is covered in the section of that legislation that deals with the question that we have here, would be for me to read the statement of the purpose of Part B. This particular piece of legislation was divided into five parts: A, B, C, D, and E. "A" dealt with the question of national and State advisory councils and the necessity for a strong planning component; "B" dealt with something that had been called prevocational education; "C", the vocational programs as we have known them in operation over the last few years; "D" with what we might call support services, and "E" with the parts that are identified by Dr. Pierce as former Parts C, D, and I, and some elements of the personnel development program.

Part B, I think, is the one that has the greatest implication for this group. If I may, I will read the statement of purpose for a section coded career guidance and exploration. The term prevocational was taken out and the term career guidance and exploration has been substituted as a recommendation to the Congress.

> It is the purpose of this Part to implement an additional portion of the career education concept in which vocational education can play an important role. As a process, career education includes career awareness, career exploration, career decision-making, career planning, career preparation, career entry, and career progression. The prime interest of vocational education is career preparation and career progression. To carry out this mission vocational education needs a comprehensive career guidance and exploration effort. This Part is intended to provide support for those parts of career education, particularly crucial to the total mission of vocational education.

This is the statement of purpose as incompassed in the proposed legislation. The funding level is identified as $60,000,000. I think it is a few dollars less than $60,000,000 in the initial year of authorization. The legislation will increase in increments of $15,000,000 up to $120,000,000 in the fifth year of operation.

We feel that there is an important place for the career education concept in any legislation dealing with vocational education. We think that one of the difficulties that has been experienced by vocational educators in the past has been the inability to address this question. Sometimes we have not been able to work with the youngsters at a level in their educational program to insure that youngsters were making decisions from accurate information rather than from emotions or from efforts of a particular teacher or counselor.

I do not think that there is much more that I could add about the legislation at this particular time. I would be happy to entertain any suggestions that you care to make or any inputs that you would like to make. I will look forward to visiting with you later in the conference.

CAREER EDUCATION LEGISLATION
EDUCATION AMENDMENTS OF 1974, TITLE IV, SECTION 406

Sidney C. High, Jr.

The two preceding speakers, Dr. Pierce and Dr. Van Hook, have discussed pending legislation. I asked to follow Vic because the piece of legislation that I want to talk about is no longer pending, it has been enacted. I thought that it would fit a little better at the end of the program.

The last time I spoke in this room was last April, I believe. We had a career education meeting involving the State coordinators of career education from about 45 States that met in this very room. At that time, I talked on the subject of pending legislation. I am happy to report that in the intervening months the legislation has been enacted by the Congress and signed into law by the President. I am speaking basically of the Education Amendments of 1974, Public Law 93-380. The Congress passed the bill and on August 21, 1974, President Ford signed it. In the Education Amendments of 1974, there is a title called Title Four, and within that title there is something called the Special Projects Act which is a new approach that Congress has taken. The Special Projects Act provides the U.S. Commissioner of Education with funds to carry out exemplary and demonstration type projects in areas of concern to the Congress and to the Commissioner.

I think that it is important to note that this is not a research and development authority. This Special Projects Act does not authorize the Commissioner to do research and development. That, as you know, is a mission of the National Institute of Education. They were commissioned by Congress to be the research and development agency in education. So they will continue to perform the research and development function. Congress seemed to feel that the Commissioner needed some money that could be used for exemplary and demonstration functions. If you have some good research and development results on problems and you think that you know better ways to accomplish some other education goals as a result, then there is a need for the Commissioner of Education to be able to move out and work with State and local school districts and actually exemplify these better approaches. So that seems to be the general tenor of the Special Projects Act.

The law says that $200,000,000 is authorized each year for the Special Projects Act. It goes on to say that the $200,000,000--or whatever amount is appropriated--is to be divided in half. Half of the money, $100,000,000 in the ideal circumstance, would be retained by the U.S. Commissioner of Education and he could use this for exemplary projects in whatever areas that he felt needed special attention in the whole field of education. The other half, $100,000,000 on the other side of the column, must be used for priority areas that Congress itself has indicated. A number of those areas are metric

education, women's equity in education, and community schools. One of those special topics is career education. So I am trying to set the framework of the big Special Projects Act--half of the money the Commissioner can use for special projects in areas that he feels to be of high priority. The other half must be spent for certain priority areas that Congress has designated.

We are fortunate in career education that Congress has designated career education as one of the congressionally-mandated areas of concern. Each year whatever money is appropriated for the Special Projects Act will be divided and then subdivided and career education is one of the mandated problem areas that must receive some attention. So we look forward now to the next three years--as the authority is good until June 30, 1978. For the next three fiscal years, after this one, we can be assured of some sort of support for exemplary and demonstration type work in career education. Congress has given us three authorities in Section 406 which deals with career education. Congress has told us to do three things.

First, we are to conduct a national survey and assessment of the status of career education and report the findings back to Congress before November, 1975. So that is the first thing right off the top. Any monies that are received must in part be used to conduct a national survey and assessment of the programs, projects, materials, and curriculum in career education. We must assemble a report and submit it to the Congress by November, 1975, so that they will have a fixed baseline as to where we stand now in career education. It will be very useful to have this sort of baseline each year, as we can measure our progress each year against the previous baseline. A national survey and assessment is the first order of business.

The second thing that they have given us authority to do is to support some exemplary projects. They want some exemplary model projects in career education. They have spelled out in the law the sense of Congress as to what career education is to be. They have said that you can go out and use some of this money to develop some exemplary models that people and Congress can look at and see what a real ongoing project in career education would look like.

The third thing that they have authorized us to do, and we can only do that in the beginning of the second year of funding, is to provide grants to States that would like to develop a State plan for career education. A particular State can apply for and receive a grant in the second and third years of funding. With this money, the State is not to operate a career education program, but it can use the funds to develop a very thorough and systematic statewide plan; a plan to determine what the State would have to do to implement career education in all the districts of the State. This would obviously involve some in all the districts of the State. This would obviously involve some needs assessments--assessments of occupational status, present resources, and additional resources needed to implement career education through a very comprehensive State plan. So beginning in the second year, which would be fiscal year 1976, we will be authorized to award grants to States for that purpose.

Those are the three things that the law allows us to do and it is important to note the exclusions. We have no authority to do research and development work. We have no authority to do curriculum work. Those are two things that are not within the scope of Section 406. Hopefully, the National Institute of Education will be moving ahead with its research and developmental work in career education and we will have to relate very closely to them for those developmental aspects of the overall career education program.

I do not want to go into a lot of detail beyond this, because I understand that in the next hour we will break into small groups and people especially interested in more detail about the career education legislation will have a chance to meet in a smaller group and discuss the details. I think that gives you a broad framework. We do have the new piece of legislation. The funding is not fantastic. The law authorizes up to $15,000,000 per year. Actually the amount appropriated this year was $10,000,000. So we have $10,000,000 cash sitting in the Treasury, marked for career education, that we can draw on.

We have all of the problems associated with a new piece of legislation. We have to develop Federal Regulations and have these cleared by all 3,000 of the people that work for the Office of Education--I think, almost all of them. Then we have to have them signed by the Secretary of H.E.W. and published in the Federal Register. Only when regulations have been published officially in the Federal Register can we begin to receive applications, award grants, and get the program underway. There is a time clock ticking away. We have to have all this accomplished no later then June 30 when the fiscal year ends. We are deeply involved now in doing this with a lot of support from the Office of Education. We have had excellent support from the Office of General Counsel--the legal people. Dr. Pierce has been the leading champion in trying to hammer these draft regulations through the review process and get them out in print. We are very appreciative of the tremendous support that he has given us to keep the things moving. Hopefully, they will be out and we will have the program by June 30. Those of you who would like to discuss various implications of the legislation can get together in the small groups here in the next hour.

EVALUATION OF CAREER EDUCATION PROGRAMS

Presiding: Peter Davis
Vice President
Development Associates, Inc.
Washington, D.C.

Panel: Russell Schuh and Malcolm Young
Also of Development Associates, Inc.
Washington, D.C.

Reactors: Dale Holden
Local Project Director
Columbia, South Carolina

Janet Latham
State Department of
Vocational Education
Boise, Idaho

Ellen Lyles
U.S. Office of Education
Atlanta, Georgia

Robert Rochow
Local Project Director
Pontiac, Michigan

EVALUATION OF CAREER EDUCATION PROGRAMS

Peter Davis

I am very pleased to be here primarily because it is not very often that evaluators and researchers get an opportunity to share their own thoughts and observations with a group that is actually trying to do the work. We are very pleased to have this opportunity. It is rather a unique one for us. All too often we submit a report and then it takes a long time before it ever gets to the people who can use it. The results from the data can't really be presented but we can share what I can put under the category of helpful hints for you so that you can take them back home for use in your own project. This will enable you to operate a more effective and meaningful project. Some of the suggestions are not based on data, but on our experiences gained throughout the country by visiting projects. We feel these insights and observations could be useful to you.

Our purpose this morning is to focus on the things that might be helpful to you. Most projects here are at least 18 months old. It is not by accident that these projects are represented. The people on the panel are the ones who bridge the span from the first round of projects to the second round of projects and who still are experimenting. The basic format of this presentation is that we will have four topics that we will cover and spend about 10-15 minutes on each. The four topics that we will cover are: project planning, project management, project evaluation, and the role of the State. Every presentation will come to the other side of the table to see if there are any questions or any comments that they might want to add to the presentation. Then we will go on to the next topic. We will go back and forth in that fashion until all presentations are completed.

Russell Schuh

It is nice to be the first presenter on project planning. One of the first things in planning is the new activities which require preparation. Frequently projects seem to neglect this or seem to forget it when they are doing their planning. The planning period usually involves acquisition of materials, training staff, development of curriculum, development of procedures, and other planning efforts. The planning phase usually does not cost as much as the operational phase of the program. You should recognize that you are going to operate for a given period of time at reduced expenditures for planning so that you can plan high enough budgets for the operational phase. If that is not possible, the project should consider applying for a standard arrangement for the operational year while they are considering their final results.

Another thing we found that projects fail to consider when they're doing their planning is the continuation after federal funds. At the end of three years, Part D just stopped and the projects had not made adequate preparation for this. And as we know, many projects here have 18 months left in their operational programs. But in planning the continuation of activities, that 18 months may be a little bit deceiving. For example, it is not uncommon in our experience for the budget of a school system to require up to 12 months' notice in adding new expenditures or securing financial support. This means that a project manager looking at an 18 months' leadtime before he has to consider continuation from school district monies may only have, in reality, six months. Frequently the federal year does not go with primary financing of public schools so that, for many school systems, the year begins next month or with March or April for budget planning. This means that what looks like six months or 18 months in terms of continuation may, in fact, be only two months. I suspect that there are some project people here who may have literally only two months in which to plan continuation of their project using district monies even though they think they have half the project's operational time remaining.

One of the things we found that is very important in planning is to be able to identify the participant in the project. In making your financial design, your plan for operation, and your goals, you should be able to clearly identify what activities you expect, what staff people you are going to utilize, what participating teachers and counselors will be involved, and what student participation you expect. The nature of the project activities being stated clearly in the beginning is very important to the manager in terms of being able to deal with operational aspects of the programs throughout the year.

One of the things to watch for when determining priorities during your planning phase is whether job descriptions are specific to your project or generic to your school system. If your job descriptions are generic, and in many cases we found them to be so, we find them not being very clear in terms of what is expected of the staff and what they are to do during the term of the project.

Another thing that we noticed in planning is that frequently projects have planned joint efforts with other activities and other programs that were related. But the nature of the joint efforts was not formalized, nor written in advance. Therefore, during the project, directors were faced with an effort that was an independent activity. This made the project responsible for accomplishing project activities on other efforts that were independent of the project and could go off in another direction which did not really meet "mutual responsibility" of the project.

Frequently in the first round, the project quite legitimately tried to tie in the existing and ongoing kinds of activities. But they failed to plan clearly in advance what difference the project was going to make in those activities. As a result, project directors were faced in mid-

term with a great deal of confusion about knowing whether they were successful in accomplishing the ongoing activities. It was difficult to determine whether the effects that they were observing through the outcomes of students were from the projects or were from the effects of the ongoing activities.

Frequently we are faced, when doing an evaluation, with this kind of a reaction from a project: "What do you have to know that for?" or "We didn't do that." or "The things that you're telling us only half fit what we're about." My advice to project personnel to overcome these types of reactions is to do a sound, clear job of advanced planning. You should plan what you are going to do, how you are going to do it, and be able to clearly link your treatment activities to the objectives to be served, and to the outcomes that you expect. If you do this, you have helped establish your evaluation based on your program implementation, and this means that you have an excellent opportunity of success in your management because you built in your criteria for success from the first moment.

Frequently planning does not include a consideration for actual evaluation criteria. A manager is often faced with getting programs operational, then sitting down and establishing an evaluation plan. They often find that activities have to be adjusted in order to get to the actual criteria and they are six months into the operation. How are you going to measure it for a year's effect based on "six months" activities? It is very important before entering a project or a project year, to establish or plan in advance what it is that you are going to do.

Dale Holden

Let me give some response to the particular points previously brought out. In the whole realm of planning, or, advanced planning, we had to move real fast. We had to do it with just a handful of people, sometimes just one or two. As I think back, I get the feeling from a number of systems, that superintendents and principals need to be brought into the early phases of the planning. This is particularly true in the curriculum area. From the curriculum area, they begin to see what we are going to do for young people. "What will be the outcome of this?" is an important point to administrators. I urge that we bring in some of the key people throughout the school system in this advanced period of planning, particularly the curriculum people.

Robert Rochow

I recall beginning as a project director and, going back to those three years and recalling the experience of the first start, I

learned an awful lot from that beginning. And it seemed like all our efforts were devoted primarily to getting staff hired and getting activities going. We did not take a chance to sit down and look at our goals and objectives and how to meet the goals and objectives--which is really necessary. One of the important activities, and one that took an awful lot of effort and time last year, was how to get the project carried out by the local school district. As you pointed out, all of a sudden we had about three months to go in the school year and we had to decide on some way to get the project supported by local funds.

I believe if we had planned in the very beginning and really got ourselves together in terms of what are our goals, our objectives, our activities were to be and set up a plan to do this, during the first year, that the end results would have been a lot less hectic. Since that is one of the goals of any Part D project, I think that one of the requirements in the proposal or plan submitted to the Office of Education should include the processes that you want to use in effecting local support. So often it is a last minute effort. This is the experience of many projects. We were very fortunate that we were able to secure local support. I think that if we had begun sooner, it would have taken less effort and time to accomplish local support.

Mal Young

I just want to emphasize that even though some projects here may have 18 months left operationally, in terms of demonstrational effect on students, it could well be the last minute in terms of continuation. We have seen good projects that were terminating and it is very sad because they were caught off guard. They did not have enough time to secure local support. They had not considered the process fully or sufficiently in advance. Do you know what you have to do to continue? If you want to continue, you need to begin making plans now. You may find that you have pitifully short time remaining in order to continue your project.

Russell Schuh

The first hint that I would offer people in terms of managing a project, and this is kind of generic, is to manage for success. You should be going someplace. You should have goals and objectives. You should be doing something. Do not wait for a year in order to get into the next planning cycle. If you manage for success, you know where you are and what you need to do in order to do a better job. Project management gives you feeling for where you are all during the year. Management is a kind of dynamic that gives a project personality. Management is an exciting proposition and you can make it different. You know what the difference is and you have some feel for where you are going.

Some helpful things turn managing into success. You have to develop some very clear performance indicators. Indicators for managers are useful and meaningful and give them information concerning the project, where the activities are, and where they are going. For instance, it is not very meaningful for you to say that you have 500 student participants referred to jobs. It is more meaningful if you report that 500 kids were referred to jobs, 150 of these were actually placed, and 75 of those placements were training-related. Management in terms of data gives you comparison, gives you the level of effort that is required to get results, and gives the level of results.

Frequently we have people tell us that 50 inservice training sessions were conducted. Fifty inservice training sessions do not give precise information. Does the inservice mean that 2,000 teachers were instructed for 30 minutes once a year, or does it mean that 50 teachers were instructed for two hours, four sessions, every two months? It is not enough to report inservice training sessions. You must know who, what, when, where, and how.

It is important for the manager to realize that an indicator will tell a manager when something is wrong or that something is wrong. It will not tell a manager what is wrong. As a matter of fact, that is why we have managers. Managers need to look at the indicators and find out why something is wrong, what is wrong, and what to do about it. When selecting the indicators and things that you want to measure, it is important to plan to secure that kind of information. For instance, many of the projects that we visited indicated that they had school placement records and could tell us how many kids were placed on jobs and what kind of jobs. We made the mistake of asking, "Can we see those records? Can we look at the results?" Often we were led into an office where there could well be 25,000 student records in big file folders. We were told that "If you'll go through the files, avoiding those pages marked confidential, and look on page 31 you will find the placement information." The manager may well have the information on files, but it is not useful. The files do not give any indication of how the placements are made and during what period of time. Therefore, to use the files as useful information, it would be essential to ask for it from counselors and placement officers using formats that condenses it from the student records into manageable information.

In terms of affecting management, we know that two people hearing something from the manager will hear two different views. Even if they read it, there may be some slight differences in interpretations. If the manager expects things to be accomplished by staff people it is important that information be formal and that means in writing. If you have expectations, if you have agreements, tend towards the formal as opposed to the informal. Even though the projects may be small, put information in written form because that will give you a basis for communicating. If you have differences, you can overcome them by referring to the written communication.

In most projects that I visited, I found the project directors were not using fiscal records which are simple management tools. There are reasons for this (for example, they are difficult to get, the cost of computers is high, and often the fiscal sections are removed from project operations). I would like to suggest that from a project management point of view, fiscal records give an indication of where you are in terms of expenditures. This is a simple, fast method for securing management data and giving you an indication of where you are. If you are 50 percent into your operational year and you have only spent 25 percent of your funds, you have a good indication that something is wrong. It is also useful if project managers can identify expenses within an activity area. Most projects cannot do this. Most of the projects are lucky if they can identify expenses by line items that are required in the application sent to the Office of Education. It will help you as a manager in terms of making effectiveness kinds of decisions and evaluations of your own performance if you can relate expenditures to budget activity areas. It will also give you an insight to project management. If a manager has 50 percent of the students in one activity while devoting only ten percent of the resources, the manager needs to question whether they are going to get the outcome they want from the activity. It is a simple process but the results are useful.

Today it would be helpful if the managers of Part D projects would consider administrative cost as they look at activities. Do not put all your expenses into an activity area and leave your project manager not really dealing with an activity. Divide ten percent here, 15 percent there, of the administrative cost to the different activities. Do not be afraid to identify administrative kinds of activities.

One of the things that we found that will be very helpful to people here in terms of where they are now is management of budgets. Accountants talk in terms of six million, seven million, a hundred million dollars and you ask them about a $125,000 project and how to manage it. To a manager it is important. It may not be much, but it is important to the project. So it is important to the managers. What we found was communication between many of the fiscal offices and the projects were poor and many project directors do not know exactly at what level they expended funds last year compared to what they originally budgeted. I would not be surprised if some of you have money that you do not know that you have. On a computer someplace, some technician is thinking about erasing it and it is difficult to adjust. I would urge you to go home and find out how much you spent last year, and compare that with how much was in the budget. You might find that you have more money than you thought. You can still apply to fiscal offices for the use of this money.

Janet Latham

One of the things that we found successful was new projects working

with State staffs. State staffs can help new projects to avoid some of the pitfalls, because we have been exposed, as you are being here, to a number of management tools. I am very fortunate in that our State is small and I know the people well. So we have had communication. I understand that lots of things are happening in States where projects are submitted and the State staff does not know about the project. They receive a copy with a request to respond in 30 or 60 days. It is a little late to help in that role, so if projects that are being created would work with their State staff, then perhaps State staffs can be of service to projects.

Dale Holden

An important fact is that, as a project becomes more sophisticated, it requires more time and effort spent in the area of data management. This type of management requires documentation. It is important for project management to develop clear performance indicators, and I think we need to look beyond what I perceive to be our present status, and to begin looking at indicators that relate primarily to student kinds of outcomes. We need to broaden our perspective and look at outcomes that relate to staff, administrators within the school district, community, and other forces that influence projects. Only then are we going to get a clear picture of our success, or in some cases, our failures.

Ellen Lyles

A very important point was made concerning specific formal written information. The president of our Coca-Cola bottling company in Atlanta related some time ago that educators in the past have verbalized but never had anything specific to say. You do not give us information on which to make decisions. The president of the bottling company was pleased with evaluation and was 100 percent for it.

Mal Young

I would like to start our discussion with project staff in the first round. The first thing that we have to talk about in terms of evaluation is, what is it? What is it for? We need to consider it as a management tool. The purpose of evaluation is to help someone to make decisions--decisions to either keep on doing what you are doing now, or if you should change something. Evaluation in this perspective can produce nega-

tive results. If you get negative findings in the evaluation, that simply may mean that you were wrong. To guess wrong is human and it is not bad. It should be understood in that kind of a context. If evaluation is done properly, it is like planning for the program next year. Part D evaluation really has two sets of people that it is trying to help. It is trying to help in providing information to the people at the local level, and it is also trying to help people at the federal level.

In our judgment, the first round projects got the most for their money. They approached it with a spirit that they are going to get the most for their time and their effort out of their evaluation. They viewed the evaluator as working for them and helping them to get answers to questions. Many times they identified what they wanted answered or what they thought needed answer because somebody else was going to ask for it. Equally important, the project director who had this attitude about evaluation conveyed to project staff and other school personnel - most especially, teachers and counselors - the importance of evaluation. We all know that teachers and counselors, and some principals, resist evaluation. The problem that many of you face is how to get them to assist willingly in evaluation. One of the ways that works is to involve people early in the process of evaluation. Involve them in deciding what information will be collected, how it will be used, and how it will be recorded. A very common problem arises with teachers when they are not involved. They do not understand what kind of information an evaluation is trying to get nor for what purpose it is to be used. It may be that the teachers do not understand totally or it may be that you are trying to secure information in what they believe is a nonproject area.

It is advantageous to involve teachers, counselors, and administrators early. This kind of involvement can be done in a well-planned, or a well-structured afternoon session early in the project. If you will involve a little time and effort at the beginning of the process, it will save you a lot of time and a lot of grief at a later time. Trying to involve teachers and other staff is getting at some of the points that were made earlier. You must have a clear idea of what you want to know. You must know what information you want from students. You must develop some benchmarks and indications of whether you are proceeding along the plans developed by the project. In effect, it is a lengthy evaluation and an ongoing data gathering effort which is part of management planning. You must get information on some kind of a regular basis which ties in, again, to the use of financial records. In this way we can handle - easily and quickly, and, from your point of view, at no cost - fiscal information on a program kind of basis for evaluation and management.

Pragmatically, the experience of the first round projects suggests planning the evaluation as you plan the project and do it each year. It is perfectly reasonable, and to be expected, if your objectives for the second year are different from the first year. Make it clear in writing, and you can plan the evaluation in terms of the second year's objectives.

Do not try two or three years later to evaluate in terms of something you have previously changed. Be relatively specific and very realistic in deciding what you will do, what you have information about, and what you are not doing. For example, if you are in the second year now, and your planning is to affect senior high students next year, and you are not doing anything with them this year, do not try to create an evaluation because somebody comes along and says "Give me your evaluation of your twelfth grade efforts." An honest, complete, and whole evaluation of what you are doing with twelfth graders is nothing. Do not try to do some fancy measurement on twelfth graders when you are not doing anything. The fact that you are doing nothing is not a statement to be ashamed of. It is a statement of fact, and it is consistent with your plans.

On the other hand, relate all that you are doing, form some basic objectives, and get the best information that you can on it. Keep in mind that good information, even though small, is a lot more useful than a lot of random information with little meaning. Be specific about what you want and the information can be both more efficient and more useful to you. In a very real sense, it is important to plan your evaluation in phases and to tie that information back into your planning process. Get information that is useful to you as you go along. Generally, you can get some indications from this information for decision-making even though your formal evaluation, with the ribbon around it, does not come until after most of the basic decisions have been made. Get some indication of program success and use that information in planning for the next year.

Robert Rochow

There are many philosophies on external evaluators and evaluation. I am glad to hear what has been said about evaluation as a support to projects. And external evaluators are support people too. You should not really get as concerned about whether or not the particular form of evaluation that you are using passes or fails, but whether it give you the information to ask the right questions so that you can begin to plan the next step. You may ask the wrong kinds of questions in the beginning but your external evaluator has to give you the kind of support to get you to the information needed. I know when I first started my project, I did not know what an evaluator was. I thought he was some mystery coming in with all his statistical knowledge and it overwhelmed me at first. I finally realized I was responsible and assumed the responsibility for the project. Hopefully, you do have responsibility for the projects for which you are directors. Any kind of evaluation is to support you. If you do not take that as a beginning basis, you can create problems for yourself from the beginning. Sometimes it gets to a point where you are not sure whether the external evaluators or you are running the projects. You have the only responsibility so I think you need to establish this in the beginning.

The other important point is that most people do not understand evaluation. If you do not set up some kind of an evaluation plan in the beginning that will work with your administrators, your teachers, and others involved with your project, they will have the tendency to look at it as the pass-fail kind of evaluation. You really have to do an educational program, insuring that the people that you are going to be involved with in evaluation are fully knowledgeable. You have to explain to them that the project is to do certain activities and that the results have to be measured. If you do not secure some kind of resolutions then the evaluation may look at it in the pass-fail way. Those kinds of things are very important to a project.

Dale Holden

One of the ways to increase involvement in the project is evaluation and we must keep in mind that evaluation can be a very powerful management tool. We have to keep it in perspective. By that I essentially mean that if you are seeking the assistance of teachers, administrators, or whatever, within your district to provide input to help you decide on your evaluation, you have to listen very carefully to what these people are saying. Project directors are really in a tough spot. On one hand you want to find out the kinds of data that really can come out of an evaluation. But, on the other hand, you also have to live with the fact that, if you are in a particular school and your evaluators are testing for an extensive period of time, this in itself can destroy a lot of the good affects that you are trying to build up. You know, the closer we move to structurally analyzing each and every component of career education and, hopefully, deciding what kind of effect that has on the overall program, the more involved we are going to be with lengthy periods of testing. We have to weigh all these things carefully before we make such decisions.

Mal Young

In the first round, of Part D, the States were involved over a continuum from being heavily involved to little involvement. In general, though, States did make a contribution just to accept a first round project. The States were also helpful in regard to the continuation of the projects, the training and technical assistance, basic planning, the dissemination of information, and in the general area of evaluation. More specifically with regard to continuation, States played two kinds of roles. One was informal, in that a State person would go to a district as a sort of credible outsider. The State person would talk to school board members, superintendents, other key decision-makers, and soften up, pave the way, and sort of facilitate continuation efforts. The State person could talk in

a way that a local person with obvious interests could not do as easily. Secondly, a number of States were able to assist the local schools by using State funds to provide a transition from federal to local support.

The States were very valuable in the area of training and technical assistance, particularly in the area of providing needs assessment kinds of information, providing training material, linking groups together, and coordinating multidistrict training. They were also helpful in the area of management development. Some of the States have a lot of experience in preparing objectives, comparing plans, and developing the strategies for continuation. It may be useful to have State people and project people sit down together and make plans for getting the project continued.

With respect to dissemination, again, there was a passive and an active mode. The most useful approach is to visit projects regularly, to view materials, to stimulate other school districts to seek information from the projects, and to create a demand for the project. Overall, the States that seemed to be the most helpful had a basic overall strategy for Part D and for implementing the concepts associated with it. Because they had this kind of strategy they could adapt projects into the overall plans. With this overall strategy they were able to pinpoint the kinds of information they wanted to disseminate. These States were geared up for helping projects seek continuation. What, from some points of view, may be interesting is that helpfulness of States did not particularly seem to be related to the amount of money that the State had nor to be particularly related to the sort of structural position of the State person involved. It was associated with State people being committed to the idea and taking the time to give some systematic design to the effort, to visiting projects, and to listening as much as they offered help.

In summary, the conclusion from the first round is that States can be helpful. There is a real payoff to the States in taking the effort. You should try to develop more rapport between project staff and State staff, because there is mutual benefit on both sides.

Janet Latham

One of the things we found helpful is that our project personnel prepared a report for State staff. Sometimes a person is assigned to do something and, in the busy world in which we live, does not know what is taking place. The State staff does not really know what is going on from the State director up and down the organization. A number of you have newsletters and things of this nature for communication. These grew out of recommendations from the first project when they were doing great things, but no one knew anything about it. We can all help in the dissemination and I think that involvement of "everybody" is a key concept in this effort. We do need to communicate, not only with your project personnel, but with all staff within the school. We need to convince

people that we need their input and that we need to share information with all concerned when it comes to continuation.

Peter Davis

Very quickly, to sum up, I think that the message that we have tried to communicate is that, from our observation of the first round of funding, it is important that you consciously and aggressively manage and plan your project. There is a premium on this, if for no other reason than that you have very limited time and very limited resources. We urge you to go back and talk to your fiscal people and make sure there is not a little money left over from last year that you do not know about. Judging from what we heard from many of you throughout the three days, you are short of money this year, and this might be of some help to you. Evaluation is to help you manage your project better and to help you succeed. And you should, if at all possible, view it in that light and use it in that way. Finally, given limited time and resources, you should make maximum use of everything that is available to you. Many States have relatively untapped resources. And again we urge you to use the resources in the most effective way possible.

PROGRAM PLANS AND PROSPECTS IN 1975 AND 1976

Part D of the Vocational Education
Amendments of 1968

PROGRAM PLANS AND PROSPECTS FOR FISCAL YEAR 1975-76

Joyce Cook

We told you on the program that Dr. Sidney High and I would talk briefly about plans and prospects for the two programs with which we are associated. We will discuss both the coordination of the Part D Program in Vocational Education and the newly created career education program. Before we begin, I would like to make several announcements.

When you came to the conference a few days ago, you received a questionnaire prepared by Development Associates which was designed to provide them input into their revision of the Handbook for the Evaluation of Career Education Programs. The results of that survey for which you received the questionnnaire will be influential both in the revision of the handbook and in USOE policy regarding evaluation. Your response to the questionnaire is disappointingly low and we do not have adequate information from you that permits us to know your feelings concerning the items of the questionnaire. I urge you to complete it before you leave the conference and turn it in. If you lack the time, then we would very much appreciate your completing it and mailing it to us. I understand it was a lengthy thing and perhaps some of you felt you just did not have the time during the conference to complete it. It is an important input into our revision of the handbook, however.

Along with recognizing Dr. Billy Pope, who has worked so hard for us in this conference, there are some people on his staff and others behind the scene whom I would like to take an opportunity to acknowledge. Working very closely with him and with Bill Cummens of the U.S.O.E. Regional Office in Dallas, has been Dr. Pope's staff - Almarie Smith, Karen Cargile, and Bill Lovelace. If they are in the audience would they stand please. Also, there have been several EPDA fellows who worked hard for us in the last two days - Dean Perkins, J. E. Cogswell, Don Saunier, Angie Grace, and Kay Kienast. Although they have been very much behind the scenes, believe me they have been a great help to all of us in the Conference.

As you know, within the Part D Program we have focused, since we began the programs in 1970, primarily on a K through 12 operation, although in some instances we were able to work at the 13th and 14th grade levels also. Throughout the years, we have had concerns that we were not getting the impact we had hoped for at the secondary level. In our initial conceptualization of the career education programs, we talked about career clusters as an organizational structure for the delivery of career education at the secondary level. I believe I can say, with some degree of knowledge, that the career clusters have been used broadly in your own projects as a method for organizing instruction at the elementary and junior high levels and particularly in insuring the comprehensiveness of your programs. You have used them to be sure that youngsters were given a broad view of what the world of work is like.

Back in 1971 the U.S. Office of Education began to develop cluster curriculums for the secondary level. Not much has been released in the way of public information about the clusters because they were very much in the developmental process. About four of those clusters are now ready to be moved. They have been developed, they have been field-tested, and they are ready to move into demonstration programs. In addition, you are all aware that the Oregon State Department of Education has been operating in a cluster mode for the delivery of vocational education since the mid 60's. More recently, the Skyline Career Development Center here in Dallas has organized their program into clusters.

In fiscal year 1975, we had funds under Part D for the initiation of new projects in only seven States and two territories. We have taken this opportunity to attempt to work differently at the secondary level than we have in your projects in the past. We have asked that new demonstration projects in fiscal year 1975 demonstrate a minimum of five cluster areas at the secondary level. We have asked for a single site, although we do not mean a single site in that we want a single school. We mean that we want youngsters who participate in the project at the secondary level to have access to at least five clusters. This means that they could be in five different schools with transportation and open enrollment provided or whatever other arrangements can be made to give them access to all five clusters. The thing that is most important to us about these guidelines is that youngster's options at the secondary level be expanded.

The clusters have been designed, as in our initial conceptualization, to be as appropriate for the participation of academic youngsters as for vocational youngsters. It was in this way that we had hoped to reduce the dichotomy between academic and vocational education at the Senior High level and actually to begin academic youngsters on their career preparation. Although we have clusters ready in several areas, one of the most exciting of these is the public service area, which will begin youngsters to prepare in areas like education, the social services, and the judicial system.

We have also asked that projects in 1975, in the interest of delivering more specific skill training for those youngsters desiring to leave school and seek a job, support the cluster experience with cooperative education and work experience programs. Through these programs youngsters desiring to leave school and go to work can get the specific skills they need, or the more specific skills than they would through the cluster programs. We have not, in the guidelines, specified that people would use the 15 suggested USOE clusters, although four or five of those are now available for their consideration. We will give equal consideration to whatever cluster system the district has selected as being most appropriate for it.

We have asked the school districts accepting funds for the first time in 1975 to do more than they have done in the past in the way of articulation. We have a concern that elementary and junior high programs in those districts give youngsters adequate opportunities to be aware of and to explore their options before they actually become involved in cluster

preparation programs. We have asked that, within the articulation component, resources be used and that project staffs give attention to easing the transition with which youngsters go from one step in the career education program to another. We want to know that they will be provided information about training options at the post-secondary level and that they will not be required to repeat their learning experiences as they move through the system. Our desire is to facilitate the movement of that youngster whether the movement is from one cluster to another for exploration or from one training option to the other as job skills are developed.

Again, we have asked for a continued emphasis on guidance, counseling, and placement programs, also at the Senior High level. We have permitted, and it is a permissive aspect -- because what we are asking for costs quite a bit of money -- that districts that wish to may continue to work with academic teachers in terms of infusion of career information into the curriculum and districts who wish to may relate academic learning to the cluster being pursued by the youngster.

It will be obvious to you that, although we, in terms of the Part D guidelines in 1975, pulled away from our focus on the elementary and junior high career education program, we still are very much attempting to assist in the career education movement.

I can speak to you, much less specifically at this time, about the plans for 1976 although we are able to speak with a degree of certainty about the priority area. In 1976 we will be taking proposals which are initiating new projects in approximately 42 States. This will be a big year for the Part D program. Most of your projects began in 1973 and you will be phasing out with the funding in 1975. Therefore we are able to start what might be termed now "a third round of three-year projects." The States that we funded in 1975 are off-cycle in those terms.

In 1976 we expect to focus the part D program on experience-based career education programs. The National Institute of Education, though its experience-based career education model, has turned out highly promising products that have been field-tested, validated, and are now ready to move into demonstration programs.

Once again Part D will be in the forefront because these will be the first products the National Institute of Education has had ready. They are a very new agency and Part D will be the first OE program to attempt to assist them to move a program from their agency to the U.S. Office of Education and out to the people in the field. This was the initially conceived design for the National Institute of Education-that they would, in fact, operate in this manner. They have taken a while getting off the ground and have had some difficulties with funding. We believe that if we are able to cooperate with them in this way that it will be mutually supportive. We believe that we can demonstrate how a research and development organization, or a separate agency such as NIE, can work to produce materials and programs that the U.S. Office of Education can then move into broad usage across the country.

I am convinced also that there are materials and products from NIE that will help us improve our own programs in cooperative education and work experience that are in a vocational structure. If I am so permitted, I plan to write guidelines so that the experience-based career education model may be used in the programs we initiate in 1976 for the purposes of either exploration or preparation.

I believe this concludes what I have to offer you in the way of an insight into the direction we expect to be taking in Part D. I want Dr. High to talk with you about the career education program and then close out the conference for us. This relates to a previously established precedent. Dr. High has been involved in putting together, running, and closing out all of the Part D conferences we have had for the past five years. Although he has now left the Part D program to work with the new career education legislation, we wish to honor that precedent.

Sidney C. High, Jr.

Thank you, Joyce. It is with a good bit of nostalgia that I take this opportunity to close this meeting. As Joyce mentioned, this is the fifth meeting of the Part D project people.

There is often a lot of criticism that educational directions get started and pursued for one or two fiscal years and then dropped before anything happens. I think one strength of the Part D movement has been its continuity over a period of time. The program has moved in a consistent direction over a considerable number of years and for an unusual number of years for a federal education program.

The essence of the Part D program was recommended by the National Advisory Council in 1967, and the Congress wrote their recommendations into Part D of the Vocational Education Act of 1968, authorizing the program. The first money was appropriated in fiscal year 1970 to implement the program. Dr. Grant Venn, who was our Associate Commissioner back in those days, is to be credited with most of the leadership in working the Part D concept through the advisory council, into an act of Congress, and finally for bringing the program into actual being.

The Act was passed in 1968 calling for the Part D program. Dr. Venn decided that the first step should be to have a meeting, bringing together State and local people, to talk about the directions we ought to take to implement the new mandate of Congress. We convened such a meeting in Atlanta, Georgia in March of 1969. It was hosted by the Georgia State Department of Education. If I remember correctly, Dr. Robert Adkison was one of the participants in that conference in 1969 and he is still with us today. This is one illustration of the continuity of the program.

At the Atlanta meeting we discussed with State and local people what Congress had told us to do and we got the benefit of their thinking in terms of what steps would be necessary to implement the program. Out of the results of that conference we published a booklet called Guidelines to Implementing Exemplary Programs and Projects which I am sure many of you have seen. Also out of that Conference resulted the policy paper under which we launched the Part D program. We received applications, chose the best ones through a panel process, funded them, and got them started. Those people received their grants in May and June of 1970.

In July, 1970, we got all of the initial project directors together. We had a meeting in California to discuss the details of launching the Part D projects for the first time.

As the projects got under way and began to produce materials and develop techniques, we had all of the project directors assemble again in Columbus, Ohio in 1971. Quite a few of you in this room right now were there in Columbus, Ohio where we had a chance to share our techniques and ideas and materials.

As the first three-year round of Part D projects drew to a close, we had another meeting at Airlie House outside of Washington. By that time Dr. Marland had come on the scene and was pushing the broad concept of career education. He was then Assistant Secretary of Education. Dr. Marland himself came out and participated with us in the Airlie House conference. Again, a number of you were with us at that conference. The first three-year round actually ended and we undertook the second three-year round of the Part D projects in which all of you are participants.

During the first year of the second round of projects we felt it was premature to have a meeting. Projects were still developing and ironing out problems. They were producing first-draft materials and we just felt the national meeting would have been a little early that first year. Instead we had a series of regional meetings. I think practically every one of the ten regions had a regional meeting with Part D project directors during that first year. Joyce and I were able to attend many of those meetings to meet with second round Part D people.

During the second year of that second round, both the project people and the regional offices kept urging us to call another national meeting. They said, "It is the second year. We are far enough down the road that we think it would be fruitful and productive for everybody to get together on a national basis." Joyce agreed to undertake the responsibility for this Conference. Joyce, I think, did an excellent job in pulling together a planning committee that represented regional offices, State offices, and local project directors to define the topics to be covered on the agenda and the format of the conference. Also with the help of Bill Cummens and Billy Pope and other people here in Dallas, Joyce was able to set the conference up and bring it into being. I certainly have been very pleased with how the conference ran and I am so delighted to see the tradition of Part D going on in this manner.

We have had a continuous history, now since 1968, of moving in a specified direction. I think that the continuous effort in a given direction is responsible for a great deal of the progress that we have made. As I have looked around the room during our meetings this week I have seen Bob Adkison from the 1969 conference, but I have seen other people from that whole first three-year cycle of Part D. I have tried to jot their names down this morning. Virginia Bert was there, Clayton Carlson, Jim Crook, Pat Doherty, Clarence Dittenhafer, Bessie Etheridge, Dale Holden, John Jenkins, Grady Knight, Harold McMinn, Lee Olsen, George Pilant, Wilbur Rawson, and Robert Rochow. I am sure that there are others I have missed. All those people that participated in the first three-year round of projects have now moved over and are participating with us in the second three-year round.

I think this illustrates something. It illustrates the overlap and the continuity that has been possible. We were able, by that kind of overlap from the first round into the second round, to start the second round of the Part D project at a considerably higher level. We were able to stand on the shoulders of the first round and go on from there. This has enabled us to make considerable progress.

Now, what I am hoping for in my new role as director of the Division of the Career Education Programs, is that as the career education program gets under way we can stand on the shoulders of the second round of Part D and go on in an even more accelerated fashion.

Looking ahead, as Joyce has done, in fiscal year 1975-76, I think that note should be taken of the fact that during the next school year at least, the career education load is going to have to be carried by you Part D project directors. You are operating under Part D guidelines that look awfully like career education to me. You have operating programs in the country. We are going to have to depend on you this next school year, as Dr. Hoyt said last night, to be the exemplary operational programs of career education.

We will be, hopefully, taking in new career education applications this spring and awarding grants.

The grantees will have their money in hand in the summer of the next school year, 1975-76. You know what they will be going through during that first year of project activity and that there is not much to show. There is a lot of planning, a lot of developmental work, and many things come out in preliminary form, but there is not much to be shown. So we are going to have to depend on Part D to keep carrying the career education banner during the 1975-76 school year. In the meantime, I can assure you that during that year we will be working with the newly initiated career education projects and trying to bring them up to speed. So as this second part of Part D finishes up in June 1976 we hope to have the new round of career education projects up to speed. Then they can go ahead and begin to carry the load of exemplifying career education. But, it is important to note that you are going to be filling the gap during this next school year in terms of showing people what career education looks like in a real, live school district.

I said a little on the first day about the new career education legislation and from that sort of projected into some of our plans.

During this fiscal year, 1974-75, we hope to get the survey and assessment going. We hope to get a contract out this spring for the national survey and assessment that Congress wants. We will begin collecting information from all kinds of districts and State offices in terms of all sorts of career education implementation--not only under Part D, but any kind of career education activities, regardless of funding source. That will be a big undertaking this Spring--to get that survey and assessment under way and paid for out of this year's money so that by next November we can report to Congress.

Another thing that will happen this fiscal year will be the establishment of the National Advisory Council on Career Education. We had hoped that would be announced by the Secretary's office in time for us to announce it to you here but it has not happened yet. We expect that to happen any day. A panel of distinguished people will be appointed by the Secretary of HEW to constitute the National Advisory Council for Career

Education. They will advise our office and the Secretary, as well as the Congress on the further development of the national career education program. That is one of the things we expect to accomplish this fiscal year.

We intend to put most of our financial resources this year into exemplary projects of various types to try to create some additional exemplary models of career education that the Congress has called for. The bulk of the resources will go into some general career education projects that will deal with what we are beginning to call IQI, Incremental Quality Improvement. We have lot of career education kinds of things already in action, but we must build the quality up to the point that we can get the kind of output that will show the Congress, the State legislators, and local boards that these things really do work effectively with youngters. So there will be, I hope, quite a number of grants for the incremental quality improvement of the career education programs that are already underway.

Beyond that, we will be focusing some grants for a series of special projects. Like Joyce and Dr. Pierce and the people who handle the Part D program, we too are concerned about the slowness with which career education is developing in the senior high school. Part D will be focused, as Joyce said, on the senior high school in seven States this year. We hope, also, to use some of the career education money for a limited number of special projects to exemplify career education at the senior high level. We also hope to have a few special projects to illustrate how career education can work with handicapped youngsters, how it can work with minority youngsters, and other special populations like these. These new projects should really begin to bear fruit in their second year which would be the school year 1976-77.

Looking ahead into fiscal year 1976, first of all we hope to continue the exemplary projects. For us that will continue in keeping with our legislation, as the major portion of our efforts. So we will be continuing some exemplary projects, perhaps initiating some additional kinds of special projects, and we will take on a new responsibility--that of State plans development.

The law provides that our efforts in State plans development will begin in the second year of the program which will be fiscal year 1976. So we will go through the usual procedure of announcing this in the Federal Register. Those States that would like to receive a grant to help them develop a statewide plan for career education can apply for and hopefully receive such grants, not for operational purposes but for very careful and systematic development for State plans for career education. The law does not say that every State has to do that kind of thing--it is not mandatory--but it implies that those States that are interested can submit an application for such a grant. We, at this point, have no idea how many of the fifty States will be interested in making that kind of an application but the opportunity will come along in the second year of the program, fiscal year 1976.

Another thing that I should mention is the need that was identified by one of our working groups for a central point at which career education information and materials could be received and disseminated. We are concerned with that too. We are concerned with the whole problem of communication among the hundreds of people who are working in career education. We hope that, to some extent, we can get a communication effort started this year. We drafted up a rather elaborate plan to contract that function out and have a very large communication effort started this year. But legal interpretations have been rendered to the effect that we cannot award any contracts this year. Such contracts would be allowable under the law in the second year, so we may have to postpone the communications activity or that portion of it into the next fiscal year. The idea would be just as one of the working groups recommended here, to have some central point at which we could receive all sorts of career education materials as they are developed, categorize them, classify them, and have ways to get them out. We are hoping if we can swing it, not only to develop the capability to mail sample materials out to people, but to actually go in and provide inservice along with it. If someone were interested in introducing an exploratory program in the junior high school, then hopefully, from this communication center, a couple of people could go out bring them a lot of material and put on an inservice education program. I know that is an ambitious plan, but we have gone into the details enough to believe that we might be able to get that kind of thing going in the second year. The Congress, in the legislation, told us to do something about stimulating or continuing the national dialogue on career education. This would hopefully be a part of the whole communications effort.

We hope to continue to hold meetings of various sorts. We were very pleased last year with the results of our mini-conferences. We were able to bring people in from 275 local districts around the country, and sit down in a mini-conference format with 12 or 15 people at a time. We spent a couple of days in very detailed discussions during which time we learned from them and they learned from each other This seemed to be a very good way to bring about a dialogue. We also want to continue meeting with the State Coordinators of Career Education at frequent intervals and perhaps to have some very large national conferences involving literally hundreds of people--not only practitioners of career education but decision-making people from the State legislatures, the Governor's offices, and so forth.

There will be this whole effort to continue the national dialogue on career education, then, and to enhance communication, both by face-to-face meetings and by some way of disseminating information in written and published form, materials, information about techniques, and so forth. We made just a small start, during our mini-conferences. We took our policy paper on career education which outlines essential implementation tasks to get career education going and we asked the people who came into the mini-conferences to look at those implementation tasks. Where they identified a task that they have been successful in doing in their district, they wrote us a half-page "how to" statement. We put all of their suggestions together into a booklet called Career Education, How to Do it, Creative Approaches by Local Practitioners. If you have not seen it and will write to me, I'll be glad to mail you a copy.

This simply takes all of the implementation tasks, and lists the ways that people have accomplished it. I just threw open a page here, and someone in Decatur, Georgia, has a technique for carrying out a certain task. Someone in Camden, New Jersey; Omaha, Nebraska; and Highland Springs, Virginia also has a technique. So here are four ways to carry out a certain implementation task. These are ways that are practical and have worked for somebody. This booklet is one of our first attempts to pull a lot of information together, and get it in some sort of form that we can get back out to people.

None of the materials that we send out are copyrighted. We are often sorry we cannot print them in the vast quantities that are really needed, but we are certainly pleased when someone wants to reproduce them in any form and give them wider dissemination.

Another thing that we have accomplished in communications is the policy paper itself. We sent that to the Government Printing Office and it is going to have an initial printing of 25,000 copies. We will get some sample copies out through various other media that this is now available. It represents our official statement of the U.S.O.E. policy on career education as defined by Commissioner Bell.

We will be working in 1975 and 1976 to stimulate continuing communication among people working in career education and will basically continue in that mode up to June 30, 1978, when the current legislation expires.

In the meantime, the National Advisory Council is supposed to recommend to Congress, the further legislation that will be needed for the next steps in the development of career education. Hopefully, by 1978, there will be additional legislation enacted that will let us broaden the scope of the whole career education operation. In general, that summarizes our plans and prospects for the next few years in career education.

Work Group A made a statement about the nature of the Part D guidelines and their relationship to the OE policy paper on career education. Because the career education policy paper represents a somewhat greater program, I thought I would say something about that. Part D is a piece of legislation that has been enacted by Congress. Part D of the Vocational Act exists with certain specified purposes. The Part D money must be used for those purposes. So what is binding on Part D operations is the Part D portion of the Vocational Education Act. Those are the purposes that must be addressed; and those are the federal regulations that govern the kinds of Part D projects that you are operating. That is where the contractual and legal responsibilities lie in Part D--to carry our Part D of the Vocational Education Act as spelled out in the law. That mandate is different from the career education policy papers that may be issued.

The new legislation that deals with career education will provide some money and as that money goes out for grants and contracts, those things will be done in the framework of the new career education policy paper. As all of us in this room know, there is a tremendous overlap between the policy paper on career education and the legislative mandate under Part D. But legally and contractually the reference points for the Part D projects is the Part D legislation, not the OE policy paper on career education. We need to differentiate between those two things.

In fact, that moves us on into a broader area, where we need to differentiate across the board between the Part D operation which has its own structure. Dr. Bill Pierce is in charge of Part D of the Vocational Education Act. Each of the Regional Offices has a Part D officer who manages the Part D projects in that Region. Each State has a Part D person responsible for Part D administration at the State level, and then there are various local districts with their Part D grants. Now that is the structure from Bill Pierce down to the local districts. Part D operates through that structure. Dr. Hoyt and I are not in that line at all. So if there are any questions, and when any differences exist between what Part D is doing and what the office of career education is doing, the Part D structure is responsible for the Part D projects.

There has been some talk about this meeting and some people have wondered why the State Coordinator of career education from a certain State is not here. This was because this was not a career education meeting. If you look at the program, the cover does not say career education. It says The Coordinating Conference for Part D and Part C Programs and Projects. From each State, then, the person who manages Part D kinds of operations was invited to attend the meeting. In some States that is the career education coordinator and in other States the State career education coordinator is a different person. The purpose here was not to assemble the whole career education community, but to assemble those people who are specifically implementing Part D of the Vocational Education Act.

That sort of thing is liable to continue to be an ongoing problem unless we clearly differentiate Part D as a legislative program from career education. We are very anxious, that as we move career education out of vocational education into this new position in the Office of Education, that we do not move away from vocational education because just about all we have to go on in career education right now came out of Part C and Part D of the Vocational Education Act. We are not tooled-up yet to carry the load, and as I said, during the next school year it is going to be up to you to carry the load. Although we have moved out of the vocational arena, we certainly do not want to move away from the activities of the vocational program. We owe the present status of career education to the vocational program. It has been a tremendous pleasure to be here at this fifth national meeting of Part D people. I certainly hope that as you and Joyce set up the sixth meeting, you will find it possible to invite me to that one too.

REPORTS FROM SPECIAL INTEREST GROUPS

Group I: Local Project Personnel
Chairperson: Jane Robertson
Local Project Director
Allegheny Intermediate Unit
Pittsburgh, Pennsylvania

Group II: Third-Party Evaluators
Chairperson: Orville Nelson
Third Party Evaluator
Menomonie, Wisconsin

Group III: State Administrators of Part D Programs

Austin, Texas

Group IV: Teacher Educators
Chairperson: William Weisgerber
Michigan Department of Education
Lansing, Michigan

SPECIAL INTEREST GROUP I
LOCAL PROJECT PERSONNEL

Chairperson: Jane Robertson

Resource Person: Matthew Cardoza

Group I, Local Project Personnel, chose to share their ideas and concerns relating to techniques and methods for the most effective involvement of the administrative structure, for the use of community resources, for the structure and roles of Advisory Committees, and for the facilitation of counselor role change, infusion, and dissemination.

They separated the administrative structure into its components; i.e., the school board, local administrators, staff, the communications system, curriculum, evaluation. They indicated that school board commitment to career education is essential to the development of effective and ongoing career education in local school districts. Its strong support is needed early in the planning and development process. In order to get this support, one should learn the make-up of the Board of Education and know exactly what information the board has received.

Local administrators should have input and involvement in any decisions made concerning career education in their schools. The person promoting the career education concept should tie himself/herself to a local administrator who knows where to go for results, and has some influence. That person must be involved. As for staff, the group suggested that infusion takes place more readily when the career education staff is inconspicuous. The more integrated the career education staff is with the regular school personnel, the more people who support career education. They felt that when the process involves cause and effect, real infusion of career education into the curriculum takes place.

They suggested, too, that a communications system be developed and carefully maintained. It should involve board members and/or an advisory council, board member associations, administrators, and community representatives. Impact is gained through having administrators speak to Lions Clubs, Rotary Clubs, etc., and through having parents, business people, teachers, etc., speak for career education.

The successful infusion of career education into the curriculum depends very much on the impressions gained by teachers in the first inservice training sessions on career education. The local project personnel felt very strongly that administrative support for career education should be stressed verbally to the teachers, and preferably by the superintendent. It should <u>not</u> be too strongly stressed as vocational education. The group also suggested that there should be follow-up contacts with teachers made by the superintendent emphasizing the administration's continuing support for career education.

In the area of evaluation, they stressed that the person chosen to write the objectives should be one who is knowledgeable about how to write objectives and who understands career education concepts. In order for career education to succeed school philosophies will have to change or at least be adapted to career education. The group felt that project management should ease the evaluation, but indicated that evaluation is made difficult because acceptable instrucments are not readily available to measure affective or psycho-motor skills.

In terms of using community resources, one effective method is to form an advisory council. Such a council should be given an opportunity for input and its advice should be used whenever feasible. Exploration sites can be identified through the council. Other kinds of information about community resources can also be obtained through the council. And it can be an additional source of tangible support; i.e., services, donations, exhibits, work carrels, etc. Parents are, of course, another community resource that can be of assistance. They can be reached through public relations releases, polls and surveys, and the involvement of Chambers of Commerce, civic clubs such as Rotary, Lions, Kiwanis, etc. Other contacts can be established through the development of a Resource Guide with the help of business and industry, the Chamber of Commerce, Junior League of Women, civic clubs, etc.; through holding meetings such as this conference in Dallas and inviting personnel from other projects; and through setting up committees involving each of the institutions to work on and attempt to solve problems.

The Advisory Committee must be a highly representative group and have members who will have influence with other community people. It should have representation, for example, from the community, students, and teachers--all of whom can be effective for public relations purposes. Consideration should also be given to sex, ethnic, socio-economic, and geographical factors. The purposes of the Advisory Committee should be clearly established. Every meeting should have a purpose and committee staff should be responsible for organizing its meeting agenda. Committees could be organized for specific tasks and be dissolved upon completion of that task. Every committee should have a real function and not be a committee in name only.

This group felt that the role of the counselor should see greater stress on group work instead of one-to-one counseling and the use of a student development plan with the counselor defining the program. This will involve the counselors' meeting with parents. The role of the counselor should be moved from an administrative role to a career development role. This can be accomplished by the following:

1. Teacher training institutions, with local project people helping to design counselor training programs that support a change in the attitudes of counselors;
2. Inservice workshops for graduate credit;
3. Influencing the power structure - counselors themselves, directors of guidance, administration, school boards.

To establish the counselors' place in the placement process, the group suggested that the Placement Office to made a part of the Guidance Department.

In dealing with secondary infusion, the local school personnel identified several problems and then discussed possible solutions. The first problem was to provide a meaningful structure of the World of Work for student use of career information. Among the solutions suggested were the use of such categorizations as People, Data, Things; the employment of the OVIS (Ohio Vocational Interest Survey) and of the Career Development Assessment component of the ASVAB (Armed Services Vocational Aptitude Battery); and the arrangement of career information according to Holland's six systems of personality classification (this would let the student discover for himself).

A second problem was to identify ways to offer exploratory experiences for the junior high level. Among the solutions offered were:

1. Set up a work samples laboratory and route all 8th graders through - for a two-day visit.
2. Take the interdisciplinary team approach. It is difficult to initiate but self-propelling. This is a Team Wheel which involves clusters of students.
3. Use a Central District Team, which rotates from school to school in the district (four teachers on a wheel).
4. Organize visitations into the community.
5. Establish a wheel within the school with the students moving.
6. Integrate the experiences into required courses.

The problem of teacher attitude change was discussed with the suggestion that project personnel approach it carefully and slowly. One suggested solution involved a needs assessment. Teachers might submit instructional units for the identification of "Career Education" relationships already existent in them, reorganize them, and let these teachers share with others. Teachers cannot decide whether they want to do career education until they know what it is. A second suggestion was to design a course at a university for credit. Several places were identified which instituted activities or developed materials which could be useful in other locations. For instance, the State of Florida disseminated a State Position Paper on Career Education. In Florida, also, a programmed text was designed and used by staff for orientation to the concept of career education. In Montgomery County, Maryland, procedures for group orientation were designed and a handbook is available. And in Washington, teachers were involved in seven steps as part of staff development and used a workbook which might be useful.

In their discussion of secondary infusion the group pointed out that materials must be purchased as teachers' curriculum changes necessitate "support materials." They felt that teachers should recommend the purchases and that enthusiastic teachers should be used to provide inservice training for other teachers.

The final point made concerning infusion was a brief defense of the work sample approach. The group indicated that the work sample approach is one aspect of the junior high program, but not the only aspect. Other aspects include infusion activities, inservice training, counselor workshops, etc. Also, within a larger school system, they contended that a real exploratory program should allow students to explore a variety of skill areas and levels of complexity. One or two visits in the community is not an exploratory program. To provide each student with three experiences would involve 18,000 placements in a district having 6,000 junior high school students--with no control over the quality of the exploratory experience. And, finally, they stressed that their use of the work sample approach as a "solution" was submitted as an alternative to providing exploratory experiences, not as a total junior high school program.

Group dissemination was another subject touched on by the local school personnel. They felt that a problem exists when local projects are asked to supply large numbers of materials outside the local area. Local monies are not adequate. They suggested the possibility of seeking help from the State Department of Education or the U.S. Office of Education. They asked what their project dissemination obligations are--with the suggestion that perhaps a finite number of copies could be made available on a routine basis, with the Regional Offices of USOE going further if possible. They felt that their developmental status should be clarified or defined because requests come in during the start-up period when no materials are ready. Two suggestions for dissemination activities were to take the newsletter approach and to use the OE Regional Offices and State Departments of Education to distribute items and to cover the cost of duplication and postage. But this latter approach would complicate bookkeeping. Another problem identified was in the utilization of material from other projects. They suggested that teacher-editors should select exceptional ideas for adoption.

Finally, the group suggested that information is needed on the copyright provisions. They were concerned that materials in the developmental stage could be easily picked up by commercial producers and placed on the market before they are ready for general use.

SPECIAL INTEREST GROUP II
THIRD-PARTY EVALUATORS

Chairperson:	Resource Person:
Dr. Orville Nelson	Elmer L. Schick

Approximately twenty-four persons attended the session. Third-party evaluators, project directors, and EPDA Fellows were in attendance. The discussion focused on four major topics--third-party evaluation guidelines, the quality of third-party evaluations, and the role of the third-party evaluator.

The group identified several problems with respect to the evaluation guidelines. First, the guidelines came late and were difficult to implement in the current year's evaluation. U.S.O.E. staff members in attendance noted that the guidelines were not official yet, but third-party evaluators were encouraged to use them. In addition, instrumentation continues to be a problem. Many existing instruments are not valid for the objectives of the projects being evaluated. This is also true for those listed in the guidelines. Several of the recommended tests require too much time to administer. And, the volume of data collection suggested is not possible.

Another problem is that the objectives in many projects do not focus on student outcomes; however, the guidelines do not recognize this. Nor do the guidelines provide flexibility to allow for changes in project activities and guidelines. (It was noted that changes in project objectives and activities are commonplace as project directors acquire more insight into the needs of their projects.) It may not be possible to make Federal and local research and evaluation needs congruent.

Several benefits of the evaluation guidelines were also noted. For instance, project directors have become more concerned with their project objectives. More effort has been given to developing activities which are directly related to the objectives. In addition, more product evaluation involving students is being carried out. The systematic approach suggested in the guidelines is helpful. And the test reviews in the guidelines are helpful.

The group identified a number of problems having significant impact on the quality of third-party evaluations. In general there is a lack of money for carrying out third-party evaluations. And often the third-party evaluator is selling a service that the project director does not want. Usually the third-party evaluator enters the project scene too late to do a complete job of evaluating. Frequently teachers are anxious about evaluators. In addition, it is difficult to develop an evaluation that will be flexible enough to accommodate changes in project objectives which come about as the project matures. Student outcomes are not readily defined in many projects. And, in general, there is a lack of instruments for use in evaluations. They indicated that there is a need to assess whether the student outcomes achieved are really of value to the student. There is also a need to develop evaluation designs that do not require significant changes in educational programming but provide the contrasts needed to isolate impacts. Finally, evaluators need techniques to link process data with product data.

Several questions were raised in regard to the role of third-party evaluators. They were as follows:

1. To what degree should the third-party evaluator be involved in project planning?
2. Should the third-party evaluator suggest developmental activities?
3. To what extent should third-party evaluators provide data for the project director's decisionmaking and assist in its interpretation?
4. Should the third-party evaluators participate in the Federal project review meetings held with the project staff?

A number of suggestions and recommendations were made, with no attempt made to determine consensus. They simply reflect ideas brought out in the discussion. Among the points made is the need for more third-party evaluator interaction with USOE staff before guidelines are established. Third-party evaluators should also be brought into a project early enough so that they can initiate planning, select (design) instruments, and develop a data-gathering system prior to the initiation of the project activities they are to evaluate. Comments and suggestions on the guidelines should be sent to the U.S. Office of Education.

In addition, there is a need to recognize the developmental nature of most projects and the stress this places on flexible evaluation techniques and systems. And since third-party evaluation is not a well-defined science, there is a need for a mechanism to share ideas and techniques among evaluators. Finally, some participants suggested that if the U.S. Office of Education desires investigation of well-defined objectives and carefully managed projects, it should consider designing the projects, submitting them for bids, and then hiring a third-party evaluator to evaluate the successful bidders. The products of these projects would be made available to the States for their use and modifications.

SPECIAL INTEREST GROUP III
STATE ADMINISTRATORS OF PART D PROGRAMS

Chairperson:
Ray Barber

Resource Person:
Les Thompson

Special Interest Group III, State Administrators of Part D Programs, met on Wednesday, January 29, 1975 in Dunfey's Royal Coach Motor Inn, Dallas, Texas. Present were persons responsible for State administration and other individuals interested in Part D Programs. The session was opened by Chairman Ray Barber, Director, DORD, Texas Education Agency, Austin, Texas. The Chairman introduced Mr. Les Thompson, Senior Program Officer, U.S. Office of Education, Region VII, and Resource Person for the session; Ms. Joyce Cook, Part D Program Coordinator, Demonstration Branch, U.S. Office of Education; and State Part D representatives. Each State administrator was asked to then identify his area of responsibility to Part D projects and estimate the amount of time devoted to Part D activities.

The Chairman stated the objectives of the meeting as follows:

1. To review the summation of responses to the survey of techniques and methods used in career education (See attachment.)
2. To establish a dialogue between State Part D personnel and U.S. Office of Education staff.

The State personnel were asked to identify their concerns to U.S. Office of Education staff members both verbally and in written form.

Ms. Cook reviewed priorities for Part D projects for FY 1975 as they appear on pages 8-9 of Volume 40, Number 1 of the Congressional Federal Register issued on Thursday, January 2, 1975. They are as follows:

Priority of Awards. In the granting of awards from funds available for the program, the Commissioner has authority to give priority to applications which rank high on the basis of such criteria and which propose projects that involve, in one operational setting at the senior high school level, all of the following features:

1. A strong emphasis on guidance, counseling, placement, and continuing follow-up services.
2. A coordinated demonstration of the cluster concept for occupational preparation, utilizing at least five different occupational cluster programs which have been developed through previous local, State and/or federal research and

development efforts. (The selected cluster programs should range from those dealing with public service and human service occupations through those dealing with manufacturing and construction occupations. The selected cluster programs should be implemented and demonstrated in such a way as to include a high level of involvement of educational, business, industrial, labor, and professional organizations and institutions both in the classroom and in the provision of work experience and/or cooperative education opportunities.)

3. Articulation with occupational awareness and exploration programs in feeder schools at the elementary and junior high school levels and with occupational preparation program at both the secondary and the post-secondary levels.

In addition to the three program requirements stated above, applicants may choose to include strategies designed to familiarize secondary school students with the broad range of occupations for which special skills are required and the requisites for careers in such occupations.

Questions were received from the floor and after considerable discussion, the following concerns were identified and/or recommendations made.

(a) Most State Directors of Part D Projects do not consider the present evaluation guidelines appropriate for Part D projects as presently administered. They are, however, instruments more appropriately designed for evaluation of research projects. The guidelines are product-oriented rather than process-oriented. Process-oriented guidelines would be more beneficial in evaluating exemplary projects.

It is recognized that the U.S. Office of Education needs data for program planning and accountability, but this type of data could be obtained through instruments designed to utilize the most current evaluation techniques.

(b) The present guidelines without revisions should be used for evaluating exemplary projects for the next fiscal year (July 1, 1975 through June 30, 1976) unless revisions can be incorporated into the present evaluation document and the documents disseminated to State and local project directors prior to June 30, 1975.

(c) The consensus of the State Part D personnel was to recommend the planning of periodic regional and/or national meetings which would permit State personnel to review and submit recommendations on priorities for exemplary programs and projects. The purpose of this input to the priorities for exemplary programs and projects is to assist U.S. Office of Education personnel in developing and administering realistic and meaningful exemplary programs.

(d) Priorities for writing exemplary proposals for Commissioner's Discretionary Funds should be released by the U.S. Office of Education and announced in the Congressional Federal Register at least 90 days prior to due date of proposals.

(e) "Guidelines" for evaluating exemplary programs should not be published in the Congressional Federal Register until the Guidelines have been proven effective and appropriate. This is to ensure that use of the present Guidelines are permissive rather than mandatory.

Thus concluded the special interest group meeting of State administrators of Part D programs.

SUMMATION OF RESPONSES TO THE
"TECHNIQUES AND METHODS IN CAREER EDUCATION" SURVEY

Problems for which State Administrators would like to seek personal solutions:

A. The role of the State Department of Education in exemplary and research projects.

B. Realistic expectations for institutions of higher education in the preparation of teachers for career education.

C. Evaluation methods and instruments used to determine the impact of career education on students.

D. Successful strategies for the implementation of career education at the secondary level.

E. Problems encountered in staff development for career education.

F. Career education resource materials for post-secondary educators.

G. Problems encountered in the development of career education curriculum materials.

H. A realistic definition of career education.

I. Techniques for teaching specific occupational information rather than conceptualizing.

J. Competency-based instruction in career education.

K. Application of a management approach to career education in the classroom.

L. Administrative strategies for implementation of career education programs at the State Department level.

M. The role of guidance counselors in career education.

N. Delivery systems being used to provide career information and feedback to students in career exploration.

O. Strategies for getting State and/or federal funds for career education projects.

P. Production of a State career education newsletter -- personnel requirements, mechanics, and costs.

Q. Establishment of a State advisory group for career education.

R. Participation of secondary teachers in career education.

S. Approaches to career exploration other than hands-on experiences.

T. Comprehensive planning for career education at the district level.

SPECIAL INTEREST GROUP IV

Chairperson:	Resource Person:
William Weisgerber	Lorella McKinney

Group IV, Teacher Educators, convened at 9:45 a.m., Wednesday, January 29, 1975 in the Pellinore Room of the Royal Coach Motor Inn. Twenty-one were in attendance representing 12 States. Of the 21, 13 represented Teacher Education Institutions, 2 represented State Educational Agencies, and 6 represented regional or local educational agencies.

The group convened with a statement from their chairperson, William Weisgerber. The session was designed by the conference planning staff to be participatory and formal statements from either the resource person, Lorella McKinney, or the chairperson would be dependent on the group's perceived needs.

Specific concerns voiced by those in attendance were as follows:

1. Trust Relationship Between Teacher Educators and State and Local Educational Agencies. Lack of confidence between the users and producers of teachers was mentioned several times as a major contributor to inadequate in-service programs. The gap widens when State and local educational agencies initiate their own in-service programs. This isolates the preservice program from current needs.
2. Communication and Understanding Difficulties. Few if any teacher educators have a good communication link with the educational planners or the direct delivery system. If communication exists it tends to deal with one subject area and follow funding sources or purposes. This poor communication leads to misunderstanding which hinders program development by all.
3. Career Education Understanding. Some view career education as a program; thus greater emphasis is placed on a separate course rather than an integrated concept. Priority must be given which will allow teacher educators to participate in various experiences which will allow them to become aware of, to adopt, and to adapt the concept.
4. Nature of University/College Involvement. The incorporation of the career education concept within postsecondary programs should not be limited to the school of education. All aspects of the institutions should be involved. It was suggested that curriculum people and the superintendent should be involved early in university personnel development planning. The secret to success is to get willing involvement.

5. Career Education Label. Perhaps a strategy that should be used when implementing career education would be to deemphasize the name and encourage those who are examining it to consider student outcomes.
6. Needed Teacher Competencies. Until we can articulate the needed teacher competencies for career education, we are hard put to develop strategies which would affect our preservice and inservice program. It was strongly suggested that goals and objectives must be clearly identified at the very beginning of planning and that there is need to develop very clear performance criteria. We must look to outcomes that relate to students and staff.

Dr. McKinney, the program resource person, elaborated on item six, career education teacher competencies. Dr. McKinney is currently directing a project which will develop a listing of career education objectives as well as alternative strategies for meeting those objectives for planning and implementing career education personnel development at university level. University sites will be asked to describe how they would use the objectives and strategies to integrate career education in their training programs.

The scope of the project is nationwide with field observations in many different classroom settings. The project staff is currently analyzing teaching/learning behavior data collected in local school districts throughout the United States in preparation for data collection at university sites. The final report will be delivered to the U.S. Office of Education by June 30, 1975.

Members of the group were extremely interested in the project and will anticipate the resource materials.

Mr. Weisgerber reported on a Michigan effort designed to organize the teacher education agencies and State Department of Education efforts in the career education movement. This activity has promoted cooperation between several teacher educators and the State Department of Education. Inservice and preservice are the prime responsibility of teacher educators while the developmental aspects of career education are shared. Agreement on expected outcomes and delivery systems has taken place.

The exchange among those in attendance was lively, reenforcing the need for such a forum in future programs.

GROUP A

DEFINING CAREER EDUCATION

Chairperson: Kenneth Hoyt, Director
Office of Career Education
U.S. Office of Education

Group
Facilitator: Byron E. McKinnon
Coordinator of Guidance Services
Mesa, Arizona

Preconference Survey Results
Defining Career Education

The preconference survey designed to elicit participant input for the conference revealed that a good deal of concern still exists in the field on a number of issues related to the definition of career education. Generally, the issues fell into three broad categories: (1) a need to improve communication with respect to what career education is and is not, (2) whether the definitions that are emerging for career education are adequate, and (3) whether current programs being designated as career education programs do justice to the concept.

With respect to communicating what career education is and is not, respondents were still concerned about such things as:

a) continued use of the term "career education" synonymously with the term "vocational education,"

b) the continued use of vocational education funds for the purposes of career education as this contributes to difficulty in differentiating between the two,

c) the continued housing of career education programs within vocational education bureaus as this contributes to unclear definitions,

d) the need for strategies to insure that the career education concept will not be subverted to the purposes of vested interests groups in the society such as the manpower-economic segment or the "education for education's sake" segment, and

e) the limited success in some areas of the country at having faculty, administrators, and students accept the career education concept as a legitimate approach to student growth and development.

Respondents' concerns with the adequacy of definitions that are emerging for career education were centered on such questions as:

a) Is there still a need to concentrate attention on making people aware that a career is a life pattern and not just a job?

b) Could wider support be attained by focusing on the multiple dimensions of life development rather than on a limited dimension? Should career education have a self-concept and attitudinal focus as opposed to a skill development focus?

c) Could career education, by definition, create the same dichotomy between career education and vocational education as

was previously created between general and vocational education?

d) How can the confusion that exists between careers, occupations, vocations, and job areas be cleared up? In this respect, should the 15 "career clusters" be changed to 15 "occupational clusters?"

e) Is the goal of career education - or should it be - to help the participant become a self-manager of learning, social relationships, and economic considerations? Is what we need, ultimately, a do-it-yourself approach?

f) How should career education relate to the total instructional program? to the guidance program?

g) Should we go for an interdisciplinary program at the secondary level for the clusters or should we go for a separate program?

Respondents had the following kinds of concerns about the adequacy of current career education programs as they do justice to the overall concept of career education:

a) Are the current career education programs sufficient to meet the educational needs of <u>all</u> students, such as those in special education and those who are handicapped, gifted, or bilingual?

b) Are the current career education programs adequately sequentialized to provide for the needs of children as they mature and become more sophisticated in their relationships with their work environment?

c) Are the current career education programs adequate to pass muster with Title IX of the Education Amendments of 1972, having to do with the educational rights of women? Are women really receiving equal opportunities for development and preparation? What about the different ethnic groups and the disadvantaged in this regard?

WORK GROUP FACILITATOR REPORT

Byron E. McKinnon

First of all I would like to say that I am glad to be able to speak sitting down because I have never found a podium yet that I could see over. Concerning an overall definition of career education, our first decision was that you just cannot get there from here and so there was really not very much enthusiasm in the groups to grapple with the specifics of a definition. We decided that we really like the policy statement that came out of the U.S. Office of Education under Ken Hoyt. We felt that we would be reinventing the wheel to spend our time here trying to come up with another definition. We felt that the policy statement was sufficiently generic, and was global enough, so that each of us could go back to our particular areas and develop our own definition of career education that would fit our local situation.

It was the consensus of our group, however, that the policy statement needed some things it did not have and that there were some implications that grew out of the policy statement that simply must be dealt with. For example, the specific statement did not have a management system for simple notation or operation. It did not describe the kind of cat that was going to come out of the program after it was implemented.

Our first group worked on that event itself--on specific global definitions--not to come up with the definitions, but to come up with descriptions of the definitions with the pieces that should be there and with the issues that needed to be addressed by any group or constituency that intended to promote, implement, and have successful programs in career education. We also found that, growing out of the policy statement and our description of a definition, there were two kinds of things to be carried forth. The first of these was a comprehensive, adequate selling job and the second, the global model and its implications.

The second group which concentrated on selling really sat down to structure a comprehensive program to describe career education to the publics that need to be sold, the strategies for selling these publics, and various combinations of the two. They came up with a system they call "You can love 'em or force 'em" and then everything in between. Our suggestions as a writing group were that we may want to use different words to describe those same options, but we are going to leave it in our report the way it is. You can take whatever editorial liberties you want. The word love sounds good and we are all for it. I am not so sure about the force part.

The third part of our group took up future projections for career education. We felt there was a need for somebody to sit down and build

a set of scenarios that say "Five years from now this is the kind of world we are going to live in. These are the kinds of things that we need to do to prepare for that kind of world." I was particularly interested in this because, in the State Department of California, they have a group they call futurists that they brought in and these futurists built 32 possible scenarios up through the year 2000. They believe this will encompass the next three generations. I believe the U.S. Office of Education could build the scenarios, pick the most plausible probabilities, and make projections to anticipate this kind of world. I think it is terribly important when you look at the kinds of effects that we are having now, and project that we'll still be checking through the system ten or 15 years from now. This means that our future planning is going to be extremely important. This group makes specific suggestions about the federal level, State level, and the local level--all groups that are involved--about the levels of involvement and specific strategies to undertake. For example, one of their specific recommendations was on funding. From our own experiences ten million dollars is an inconsequential amount of money with which to fund an ambitious program. Something in the neighborhood of 150 million dollars in the next couple of years would be more in keeping with the need but would certainly not be sufficient. Ten million is totally inadequate and 150 would approach adequacy but not sufficiency. This group then continued to make other specific kinds of projections and recommendations.

The fourth group that we ended up with dealt with infusion and the evaluation policy as it was applied by the U.S. Office of Education. These persons were speaking in particular to the fact that Congress is requiring an assessment of the state of the art and that one aspect of this assessment should be on the art of infusion--what infusion really is, what it really means, and what part of our vocabulary has common meaning when we talk about infusion. Any attempt to assess career education should deal with that first and I certainly include that as part of it.

The position of this group was that we have a kind of a dichotomy with the Part D guidelines for evaluation and the policy statement with all of us kind of caught in the middle. This group felt strongly that there had to be some sort of reconciliation between the policy statement and the guidelines and that any modification of the guidelines certainly should include a much higher level of participation by those who are effected by it. We really feel that this kind of scrutiny is now in order.

I could not digest all the work that has been done by this group if I were given two hours and I am certainly not going to be given two hours. I personally want to say to them that I was terribly glad that I had the opportunity to spend that last several days with them. I was totally impressed with our capability to do whatever we needed to do. We came together from diverse quarters and disciplines and

geographical areas in this meeting and, in the short time that we have been here, have come up with what I think are substantive statements. I would like to encourage you to read these proceedings. They are accompanied with specific suggestions, graphs, clues to do what, when, and suggestions for how. I think that the group really has done a magnificent job. I particularly want to thank Ken Hoyt, on behalf of the group, for his participation. He spent a considerable amount of time with this group and I think it was most helpful.

WORK GROUP REPORT

Introduction

There were approximately thirty-five people who registered and attended this group.

The first meeting was a "get acquainted," processing session, primarily interacting very enthusiastically with Dr. Hoyt. The second session was used to structure subsequent activities.

The first point, very quickly established, was that there was very little interest in working on a definition for career education. The rationale being as follows:

1. The Policy Statement written by Hoyt and signed off by Bell was a generic statement from which any local agency or organization could build its "own" definitions.

2. This type group was not particularly well suited to attack such a substantive task because of inadequate preparations and very limited resources such as reference material, clerical assistance, and "other" human resources.

However, the group did feel that certain issues related to the Policy Statement and the Part "D" guidelines could be identified. The issues identified were:

1. Since the Policy Statement lacked any kind of management scheme for program development and also did not describe the characteristics of an individual who emerged from such a program, some basic global model was desirable. This group was chaired by Bill Smith and George Lulos.

2. If we accepted the Policy Statement or a generic definition, there needed to be a comprehensive "selling" program that would be directed at all levels and populations. This group was chaired by Orrin Laferte.

3. There ought to be some future projections made relating Career Education to scope, funding, State involvement, responsibility, and coordination with other resources. This group was chaired by Bert Nixon.

4. There were implications growing from the guidelines which were especially important for the areas of Evaluation, Infusion, and Guidance services. This group was chaired by Roy Bastian.

The body of this report then contains the results of these four separate work groups. The reports are essentially as submitted with only minor editing by the group facilitator.

SUBGROUP I

A GLOBAL MODEL AND ITS IMPLICATIONS

Byron McKinnon, Group Facilitator

A GLOBAL MODEL

In trying to develop a global model for career education, there seem to be two primary assumptions: (1) The Policy Paper of the USOE is sufficiently comprehensive and has achieved sufficient consensus to be the basis of such a global model, and (2) A global model should be suggestive rather than prescriptive; that is, it should include each generic component and aspect but not dictate the specific composition and implementation of any State or local career education effort.

Further, it seems generally agreed that one may look at a model in terms of both process and product. Process can include strategies, stages, ripple effects, implications, relationships, and so forth. Product includes constituencies, outcomes, results, and so on. Process centers around structural elements and how they intermesh and affect each other. Product centers on the learner and other constituencies like school, home and family, and the world of work. Process is what you do to the constituencies; product is what you expect of them. Process and product are closely related; they are interdependent; and they are equally important.

Finally, three steps relating to both process and product must be taken: planning, implementation, and evaluation. These steps are not completely distinct or actually exclusive (in terms of either conceptualization or timing). For example, monitoring evaluation should occur throughout implementation. Also, evaluation results should feed salt to the planning stage (recycle and reiterate).

However, while stressing the interdependence and overlap of all of these aspects of a general model, there is the practical need to break down a model in terms of manageable steps and stages; that is, to make it understandable to all constituencies, and to make it easily implementable programmatically. In short, one must show clearly the elements, steps, components, and stages which, taken together, represent career education as total concept, but which, taken separately, represent options for priorities for career education as programs.

To this end, we have developed this statement with attachment - not in opposition to the USOE policy paper, but rather in elaboration or interpretation of it. If the policy paper is the engineering text, then what we have put together here is a portion of the blueprint. Or, if the policy paper is a message on nutrition, then what we have assembled is a recipe for a smorgasbord.

As the learner is the target of our efforts ultimately, we have attempted to represent career education graphically in a learner-centered mode; we have tried to picture him/her in a developmental context (Chart I). In this chart, the dotted line represents the growth of the learner. At birth he/she is defined totally in terms of family; home and family are the only relevant dimensions, even though home and family exist in a context of community and the world of work. As he/she develops, school becomes increasingly central. As the student's interests broaden, they begin to include community (e.g. scouting, religion, neighborhood, etc.) and the world of work. While school is central, a good part of it overlaps with community (social studies, etc.) and with the world of work (cooperative education, etc.). Further along, the individual begins his/her own family (or circle of friends, commune, etc.) and work and community assume proportionally larger parts of his/her time and interest. School may or may not be part of the picture at any particular time. (It should be noted that this graph assumes a distinction between education and school, with school being formal mechanisms of growth, and education being both formal and informal mechanisms of growth.)

A couple of points are important here. First, only a fraction of school is separate from community and the world of work; there are larger areas of overlap, and , than there are of only school, . Second, the exact directions, angles, and lengths of each line of demarcation will depend on the local situation, as will the proportional sizes of each segment. They will also depend on each individual--in terms of how important to him/her the family is, in terms of when he/she enters the work world and when he/she leaves school and/or returns to it, in terms of how many community activities are involved, etc. For example, the dotted line for some individuals may not extend at all into the community rectangle. And for some school systems, the school portions (roughly diamond-shaped) may be flatter and not extend as far into the community and/or the world of work. However, this structure, and the partitions of experience that constitute it in general, can be considered to represent how an individual develops, chronologically speaking.

Career education then refers to how we--as teachers, counselors, administrators, parents, and as developing individuals ourselves--manipulate these shapes and guide the dotted line. Each State or LEA, using a graph such as this, can make its own decisions as to which shapes to manipulate or massage, as to what extent the overlap should be, etc. However, no matter what decisions such agencies make, they will have to recognize that, even if they decide to ignore certain blocks on the graph, the forces represented by these blocks will have an effect. And they will have to recognize that no matter what decisions they make, the dotted line (the individual) will always be a vector force in its own right.

Chart II shows this picture in a slightly different way. Here

CHART I

DEVELOPMENTAL CONTEXT FOR LEARNER-CENTERED CAREER EDUCATION

the squares of the matrix are left blank, signifying that the State or local agency will, in its own way, fill in the exact strategies and programs that belong there, if any. But no matter which ones they fill in or how they fill them in as programs, career education as concept involves all of them. If one is not filled in, then career education will occur informally and often haphazardly, but it will occur nonetheless.

Chart III is a beginning at demonstrating the stages, with respect to each group or constituency, that need to be taken in translating the model as a graph into action as programs. It is clear at this stage that "products" can be many things. They can be students as affected by us; they can be attitudes (ours, students', parents', etc.); they can be planning charts like these, filled in by a local committee; and so forth. They can be intermediate or final, tangible or intangible. Finally, it should also be clear that given all the things that products can be, and all the places where they can be found, they are inextricably intertwined with process, which is our next consideration.

CHART II*

AGENTS THAT AFFECT INDIVIDUALS (CHRONOLOGICAL)

	Pre-K	K/Elementary	Middle	Secondary	Post-Sec.	Adult
HOME AND FAMILY						
COMMUNITY						
SCHOOLING						
WORLD OF WORK						

*Each square on this chart as on Chart III can be developed into its own entire matrix suited to the unique goals and resources of each State or LEA.

CHART III

PROGRAM STAGES FOR EACH CONSTITUENCY

	PLANNING	IMPLEMENTATION	EVALUATION

*Effectiveness seems to fit here but evaluation of thi is implicit in evaluation of learner outcomes.

IMPLICATIONS OF THE USOE POLICY PAPER: PROCESS TASKS

"American education cannot be said to have responded to the demands for educational reform by simply endorsing the career education concept. Only when action programs have been initiated can we truly say a response has been made."[1]

The following list of tasks implied in the USOE position paper for career education is not intended to be comprehensive; however, until and unless all of the process tasks specified below are underway the initial implementation of a K-12 career education program cannot be said to have taken place.

1. Develop a local definition of career education.
2. Develop roles and responsibilities of local personnel as they relate to the other processes identified.
3. Develop a process for local needs assessment to determine local needs in the other process areas listed.
4. Develop a plan for orienting local personnel to the concept of career education (inservice) to include practical inservice steps after the orientation phase leading to infusion of career education objectives into the existing instructional process.
5. Develop programmatic processes for educating parents to the need for career education.
6. Develop a process with which an LEA can identify learner outcomes (objective level) for career education and a process to insure that the total number of objectives are comprehensive for an individual and/or special groups of individuals.
7. Develop a process with which an LEA can sequence (grade level and subject area) identified learner outcomes (objectives) at as many points in grades K-12 as appropriate.
8. Identify a process by which LEA personnel, primarily teachers, can identify alternative methods of teaching for the achievement of the objectives identified and individualize the sequence of desired learner outcome.
9. Develop a process (total plan) for involving the community (persons outside the educational community). This plan should include processes for:

    1) Setting up functional community advisory committees.
    2) Establishing methodologies for use of and setting up management files for resource people in the classroom.
    3) Establishing field trip sites and procedures.

[1]USOE Policy Paper, p. 14

4) Establishing community co-op stations for activities such as shadowing experiences, etc.

10. Develop a plan or process which can be used to locate/circulate materials designed to be used in the classroom for career education.
11. Develop a plan or plans for organizing the management of academic classrooms compatible with management strategies of industry.
12. Develop a plan for ensuring that all students have the opportunity for a variety of work experiences outside the classroom to include student selection procedures.
13. Develop a plan for job placement and follow-up of high school graduates.
14. Develop a plan for evaluation, both process and product, to include the development of data collecting instruments for product or performance objectives.

RECOMMENDATIONS:

1) More detailed scrutiny should be given to the position paper to identify implied processes.
2) After the identification of implied processes, global models for each process should be developed.
3) The procedures resulting from global models should be aligned on a time spectrum.

A COMPREHENSIVE CHANGE APPROACH

FOR

CAREER EDUCATION

The purpose of this paper is to describe a systematic and comprehensive approach for "selling," "marketing," diffusing career education at all levels in this country. It is our feeling that there are currently many gaps in this system as well as many misdirected techniques being utilized by members of the system at various levels. We must assume that there are currently at least two populations that are to be dealt with: (1) those who, because of position or conviction, are within career education, (2) those other publics concerned with education who are not currently publicly advocating the concept.

Using these two publics as the focus, the following diagram illustrates our conception of a systematic change agent procedure for all levels to be used with all populations.

We have used three symbols in the diagram which indicate three general techniques which can be used by various people with the publics with which they deal. These techniques are what we have called the "Lov 'em," the "Buy 'em," and the "Force 'em" techniques. The love 'em technique includes all those techniques which relate to the use of effective interpersonal skills and institutional change theory and hypothesize that the only way to get substantial lasting change is to get as many people (Publics, Agencies, etc.) as possible to feel that they have an investment in the concept and know what they can get out of embracing that concept. It includes an understanding of power sources and the ability to identify and utilize the formal and informal power sources in any environment.

The "buy 'em" technique is simply that you bring someone into camp by giving him the money to carry out the GOALS of the program.

The "force 'em" technique implies that you can make some people do some things to advance the cause of the program by applying sanctions. If they do not comply, cut off the funds. Usually this technique is in the form of a policy statement from above.

The diagram indicates that certain techniques are more suitable at some levels than at others. First the career educator must effectively identify the relationship between himself/herself and the public with which they are dealing. If the person being convinced is in the vertical line and below, the career educator may be able to use the buy 'em or force 'em techniques. But if the person being convinced is one of the horizontal groupings the career educator is most likely going to have to use the love 'em technique.

In effect what we are saying is that the Office of Career Education in U.S.O.E. can demand quality at the State level through the money and policy route; and, consequently, the State career education people can do the same thing with local programs (with a little bit of love.) At the same time the national office must use the love 'em techniques with all the publics in its environment (See attached list) to get each to make policy statements in their guidelines and funding policies that establish career education as a priority. This then will put buy 'em and force 'em techniques in process in these other agencies at the State level. At the same time that the buy 'em/force 'em pressures are impacting the other agencies, the State career education people should have been utilizing the love 'em technique with the other State people so that they feel an investment at that level. As the arrows indicate, this same procedure then moves from State to local level so that when the local project director tries to include the Chamber of Commerce, for example, that body will have national and State direction to get involved.

This has been a very quick description of a massive system. We hope that it communicates the need for a consistent effort at every level to sell the concept.

We have attached lists of some of the agencies and publics at each level which must be included in this program.

1. Congress
2. Rest of O.E.
   A. ESEA
   B. Voc Ed
   C. Higher Education Act
   D. Others - i.e. Handicapped, Women, Indian, Spec. Ed. etc.
3. Publishing Companies
4. NIE
5. DOL
6. Commerce
7. NEA - AFT
8. National AFL/CIO
9. National Chamber of Commerce
   Other National Business Men's Clubs (Rotary, etc.)
10. National Parent Teacher Association
11. National Student Group
12. National Higher Education Associations
13. National Mass Media
14. Others

STATE AGENCIES AND PUBLICS

1. Legislature
2. State Board of Regents/Education
3. Other Sections of State Departments of Education
   A. ESEA
   B. Voc Ed
   C. Higher Ed
4. Colleges and Universities
5. State Manpower and Labor People
6. State Teachers Unions
7. State Chamber of Commerce
8. Special Education
9. Department of Labor
10. State Mass Media
11. Others

LOCAL AGENCIES AND PUBLICS

1. City Council
2. Chamber of Commerce
3. School Board
4. Parents
5. Students
6. Teachers - Staff - Counselors - School Programs, etc.
7. Administrators
8. Welfare Agencies
9. Labor - skilled, office
10. Small Business - Big Business
11. CETA
12. Manpower
13. Penal Systems
14. Mass Media - Papers, TV, Radio, Magazines, etc.
15. Religious Bodies
16. Minority Agencies
17. Others

SUBGROUP 3

FUTURE PROJECTIONS FOR CAREER EDUCATION - FIVE YEARS

BY 1980 THE FOLLOWING CONDITIONS SHOULD EXIST

I. Federal Funding
   A. There should be significant ederal funding to assist (absolute minimum $150,000,000 per year) in the implementation of career education and this funding should be seed money.
   B. This would stimulate State and local funds for implementing career education in the 50 States and eight territories.

II. State
   A. Every State should have an annual State plan functioning for the directing, implementation, and evaluation of career education. The plan should include a State Office of Career Education with a full-time supervisor.
   B. Career education should be a part of teacher education preservice programs in each State.
   C. Competencies of the ongoing project personnel should be preserved. Every local educational agency will have a person with designated responsibility for promoting and implementing career education.

III. Local
   A. There should be a career education coordinator in each local school district or cooperative agency for districts.
   B. Teacher career education inservice programs should be a part of the program of each local school district to achieve identifiable competencies.

IV. Collaboration-Partnership Role
   A. Every local educational agency should have formed a collaboration - partnership role with parents, churches, service clubs, business, labor, and every part of the community for the formation of coordinated cooperative effort.

V. Change Process-Reform
   A. The policy paper (An Introduction to Career Education) clearly states the need for educational reform. We support the changes proposed by the policy paper to bring about these reforms and suggest that the National Advisory Council for Career Education address themselves specifically to the suggestion for education reform listed in pages 16-18 of the policy paper.

VI. Long-Range Responsibilities
   A. The long-range responsibilities of the Federal, State and local agencies are to help each student achieve that career which is most satisfying and rewarding.
   B. This responsibility can best be met by a coordinated effort of these three agencies.

For career education to mature and be fully implemented as a concept, the role of the counselor (and counselor education) must be expanded. Counselors must become as deeply involved with the other school personnel and the curriculum as they have been involved with individual students and testing in the past.

Career education calls for coordination, for instructional and developmental reasons, among the teachers, administrators, guidance services, and the community at large. To accomplish this, the duties and priorities of the counselors must be examined, evaluated, and through joint concern and cooperation, be defined to meet the needs of the students and the times.

SUBGROUP 4

INFUSION AND EVALUATION

INFUSION

1. Recognizing the broad range of activities that are called "infusion," we recommend that a definition be developed that includes and defines the various styles and modes of infusion. Further we recommend that the relative status and merits of each be determined. In other words, what types of infusion are people using? And is it working?

2. Recognizing that there are alternative delivery systems other than "infusion," we recommend that their nature and relative merits be specifically determined and disseminated.

3. Through comparison, it should be determined if, and under what conditions, "infusion" is a viable delivery system and should remain as a desirable national goal. One of our major concerns with problems of definition and the upcoming review of the state of the art requested by Congress revolve around the term "infusion." "Infusion" into existing curriculum has been a major emphasis and a national assessment should attempt to measure the degree of infusion. We feel that the definition of "infusion" will be a problem. Therefore, we would like to make the following recommendations to the national survey.

   a. That the survey determine local understanding or support as an indicator of degree of implementation (Financial, Products, Resources).

   b. That the survey look at other factors

EVALUATION

This group was assigned to discuss evaluation as it relates to a definition of career education. As the generic description of career education, the USOE policy paper was accepted by a majority of participants. The following observations concerning evaluation are made within that context.

(1) There exist both local and national needs for evaluative data which may not always be the same.
(2) That evaluation plans should be developed cooperatively between local agencies and evaluators.
(3) That the Draft Guidelines for the Evaluation of Career Education Programs appear impractical because
   a. the "state of the art" in evaluation indicates that appropriate instrumentation is not available to evaluate student performance in some major components;
   b. it decreases local efforts to adapt career education to local needs;
   c. testing time appears to be excessive in school situations;
   d. the statement of 33 specific objectives may create a "de facto" definition of career education.

GROUP B

STRATEGIES FOR MOVING CAREER EDUCATION FROM A PROJECT STATUS TO AN EDUCATIONAL PROGRAM STATUS

Chairperson: William Pierce
Deputy Commissioner of Occupational and Adult Education
U.S. Office of Education

Group Facilitator: Robert Rochow
Pontiac Public Schools
Pontiac, Michigan

Resource Person: Harvey Thiel
Senior Program Officer
U.S. Office of Education
Region X

Preconference Survey Results Relating to
"Career Education: Projects to Program Strategies"

Survey results relating to this area revealed that career education practitioners' concerns clustered into four main categories: 1) continued funding for career education, 2) securing the support of administrators and policymakers, 3) appropriate within-district strategies for continuation, and 4) appropriate State and national strategies that are needed to support the local districts in their efforts to embrace and continue career education programs.

With respect to the funding needed for career education, the following are some of the questions that were raised:

a) What are the best ways for working with legislative subcommittees on career education? What should be priority/meaningful topics for analysis/discussion? What should constitute career education legislation? How do you reach legislators before subcommittee recommendations come to the floor?

b) Where can additional funding be found to fund career education at all levels--not just the K-12 or K-14 levels?

c) What type of funding (federal) can we expect? Can we expect 15 to 20 percent of total federal education dollars to be allocated to career education?

d) Where, in the future, will our funding come from for placement and follow-up services?

e) Will there be funding for exploration/employability teachers? for materials and equipment? for career awareness coordinators?

f) What are the implications, for career education, of continuing to use federal Vocational Education funds for career education? for vocational education?

g) Why have not matching funds been used as a strategy for supporting the continuation of career education? Why not decrease federal funds on a sliding scale--100% first year; 75% second year; 50% third year; and 25% fourth year? Why not extend the funds in this way over a longer period of time, say five years instead of three years? Why not have a stiffer policy for local towns who commit themselves to picking up the program once the federal funds run out? Should Boards of Education and Finance be oriented to this philosophy (stiffer policy) prior to getting the grant award?

h) Should DHEW seek legislation which would provide tax relief for business, industry, and service organizations who choose to participate in local career education effort?

i) Address the need for added financial support to fill the gap left by vocational education. How can we provide for students not in vocational education and for the articulation of work-experience and cooperative education programs with the 15 cluster programs to give a program that would serve all career education clusters?

With respect to securing the support of administrators and policy-makers at the local level for the continuation of career education as an ongoing part of the overall educational program, survey respondents presented the following specific questions:

a) In what ways can the program continue to prosper purely through the leadership of administrators, principals, and teachers?

b) In what manner can career education be coordinated with other district programs; e.g. Special Services, Talented & Gifted, etc?

c) Can subordinates be expected to implement and continue career education unless they view it as something for which they will be rewarded?

d) What evidence other than verbal statements should be expected if people are really concerned about career education?

e) If career education is to be an ongoing educational program for all students, should it not also be implemented for special education students? If so, what are the best strategies/methods for special education?

f) How do you move persons making decisions about career education and local resources from the awareness stage to the acceptance stage?

Questions related specifically to the within-district strategies for phasing the project over into the ongoing educational program focussed both on management processes and on attitudes and activities of the project staff.

a) What specific steps are recommended in going from a project basis to an educational program basis? How do you identify target groups (administrators, policymakers, parents, and community groups) and analyze their needs for information? What steps (sequence) should be involved in phasing? What

other funds can be used for ongoing programs? How can projects be successfully continued if specialized staff is not retained? Should career education staff (project) involvement be phased out during or after the period of outside funding?

b) What are some changes that can happen or need to happen in the local educational system--such as assigning credit to career related activities or revisions in the Carnegie Unit system?

c) What revisions should be made in the financial structure that will reflect a collaborative effort?

d) How many students should be required to warrant a director or other support of career education activities?

e) Should evaluation (particularly process and input factors) provide needed directions for diffusion strategies?

f) Are existing instructional/administrative models realistically set up to carry out career education objectives?

g) How do local project directors diminish their perceptions of themselves as grant administrators and researchers only, of their activities as project-related, and augment the perception of career education as integrally related to all educational endeavors? How do you win a place in the hearts of institutional power agents? How do you develop strategies to work yourself out of a job?

The issues with respect to State and national strategies designed to assist local school districts in their phasing activities follow:

a) How can the States assist with some changes that can happen or need to happen in the educational system--such as assigning credit to career related activities or revisions in the Carnegie Unit system?

b) What revisions could be made in the financial structure to reflect a collaborative effort?

c) What is being done to inform teacher educators, school administrators, teachers, State and local school boards of education, and the general public about career education?

d) What type of firm commitments should exist between the State and local levels? (A need is felt for a team effort. Current effort is felt to be fragmented.)

e) What is the recommended place of career education in the organizational structure of the State Department of Education? at local levels?

f) What have State legislatures done in career education?

g) Could/Should U.S.O.E. package methods and help train top school administrators in the concepts of career education and, more importantly, in adopting such programs after funding is complete?

h) Could U.S.O.E. extend funding period for grants (successful ones) to continue demonstration/dissemination aspects past the three years?

WORK GROUP FACILITATOR REPORT

Robert Rochow

I would like to thank personally the members of my group and in particular, Dr. Pierce. It was my first experience in working with him and I gained an awful lot of knowledge from him. He is very aware of what is going on, not only in vocational education, but in career education. I would also like to thank Harvey for being a resource person in our group. We did appoint three group leaders within the group and without them we never would have gotten where we are today--in particular, Dale Holden from South Carolina, our energetic and enthusiastic Dr. Lew Abernathy from Texas, and Charles Henry, who is a finance advisor in Missouri from the State department. Our goal was to discuss strategies through which career education might be moved from a project status to an educational program status. I think in many cases we agreed to disagree on many kinds of terminology. It seems that each section of the country has its own vocabulary and it was somewhat difficult in trying to clarify these things.

What we wanted to do is to define what it is we are talking about. Obviously the Part D and C projects would be a project level because they are at a developmental or pilot stage. What we looked at was: what does it mean to go from the project stage to an educational program? Now that can mean many things, but what we tried to do is put it this way. To become an educational program there are significant people in a local school district, such as the administration, teachers, and the total human resources within that district, who have to accept it. They have to accept the goals and objectives, and make them a priority in the school system by supporting the delivery of the program to the students. Those are a lot of words; but until those kinds of things happen the project will not become an educational program.

In order for this to happen we feel that we have to develop a model for putting the project into a local educational program. Of course to make this happen a project has to be thoroughly planned out. The three things we came up with in terms of being a model were these. In order for a project to become a program, you have to go through what we call an exploration, understanding, and action phase. Let me explain this. I relate this to smoking. I can explore what it means for me not to smoke. I can understand why I should not smoke. But it does not make any difference until I act on it. I think we have to go through all three phases. The decisionmakers have to explore what it is we are doing in terms of student outcomes, they have to understand what it is we are trying to do, and then they have to act. Until those three things happen, it probably will not become

a program.

From that point we went into a lot of suggestions. Number one, we felt that you could help project directors who are in a project status, and make their job a little bit easier, by getting commitment from a local school district. In our system, it seems that if the local district puts some money into it there is more commitment and people are more willing to explore and to understand in order to act. It is nice to get 100 percent funding but that may mean that the project director or the project staff has to work twice as hard in order to set up that system for the transition into an ongoing educational program.

The other idea that we came up with was the evaluation of student outcomes. In terms of career education, if we begin to work within the existing school structure and within the curriculum where career education is already infused, we can look at the total human resources. I think Ken pointed it out pretty well last night, that the difference between what is happening now and what could happen is that we are asking for responsibility, not only in terms of the school district, but in terms of all the possible human resources that are available to us.

We also said that short-term evaluation and long-term evaluation should be built into projects in order for it to be an educational program. We need to pilot many programs right now. We need to find out what kinds of things will happen with students, but we need to be longitudinal over long periods of time to see if they really work. The whole idea of exploration, understanding, and action is that it repeats itself. It does develop a recycle system so that if I act on something, I can go back and explore it again and keep changing it to meet the changing needs of the community.

The next thing we did was to begin on the State level to see how the State level could help in terms of going from projects to educational program. But the States, in all cases, have the responsibility for setting the models for education within each State. Their main function after they set up the models is to provide support for local school districts to deliver the programs to the kids. That can come in many forms. They could provide support in terms of money, support in terms of legislation for career education, and support in terms of getting people to support the career movement within the State department. There are all kinds of ways in which support could be utilized. We talked about the human resources and the idea of bringing the total community with its organizations and agencies into it.

We need to work on the local level and also with the State level because we have a local labor relations board as well as a State level board. They can bear the responsibility together for securing resources. I think you can see how that is; they are pushing it right

up to federal level. Again the federal agency becomes a support agency to the State, in helping the local school districts meet the desired outcomes.

I think one of the things we have to begin to deal with is that we have to set goals in terms of competencies for kids. What is it we want our kids to have as a result of going through our school system? We know that career education has created some kind of metabolisms that help in reading and writing. The kids are also developing some other skills that they really need to function in society. When the State department begins to set competency standards that go across discipline lines and begins to develop persons who can work with all areas, we will achieve those competencies. It is interesting that at the federal level, the person in charge of career education works directly with the Commissioner of Education. I know on our level the same thing takes place since the person in charge of career education reports to our State Superintendent of Schools. He has the access to begin to bring together all the disciplines and to ask the disciplines to look at the total human resources. It has been quite an experience working with this group. I think the whole idea is that if we are really going to move from a project phase through into an education program, these kinds of things do have to happen. We have made a lot of suggestions and outlined a lot of other ideas in the report which you may find useful.

WORK GROUP REPORT

This work group began by listing a set of observations about the nature of career education and its implementation which formed the backdrop for the development of statements about its being phased into the ongoing educational program.

1) First of all most of our career education activities are being fused into the overall educational program. Consequently, specific support beyond the developmental stage is difficult to budget for. It must be correlated with other educational endeavors.

2) As a general rule, career education is easier to implement and defend in the elementary schools. Secondary and post-secondary programs are going to require more encouragement and forcefulness if they are to be implemented and continued.

3) Cooperation among agencies at the local level for the purpose of career education is almost totally dependent on the personalities involved within those agencies. For this reason, cooperation for the purpose of career education is almost a matter of agency by agency negotiation.

4) The future of career education, past the "project stage" is inextricably interwoven with the content of inservice and preservice teacher education. Past the project stage it will be essential that policymakers committed to career education be able to rely on the existence of educational personnel--teachers, counselors, administrators--who are competent in the area of career education. Funding for preservice and inservice preparation for career education should be sought at <u>any</u> level from <u>any</u> source.

5) State departments of education must, if career education is to continue, provide a leadership role both with respect to the preparation of teachers and with respect to the provision of a centralized information dissemination unit. Whether such a role is legislated, mandated, assigned, or assumed, this will be essential. Such a unit should be charged with the provision of effective leadership and assistance through the developmental and implemental stages to the extent of its resources and authority. Proposals from local education agencies to the U.S. Office of Education and the funds ultimately granted should be "funneled" through the State agency to guarantee State review and State coordination of all career education efforts.

The work group on strategies for moving career education to an ongoing educational program status identified the following broad conditions as being essential.

1) The project must move from its own separate identity into the mainstream of educational endeavor. Responsibility for insuring this lies in the curriculum design of the program and the people who implement it. Both should, from the beginning, be visible and receive the input of those who will make ultimate decisions about the program's fate. The project must operate within the existing program structures rather than create new ones. While this may take some time, the project personnel must work within the curriculum mainstream.

2) The project personnel must view evaluation as a basis for continuance. As the project moves more and more into a program status the responsibility for evaluation must shift from third-party to internal school district evaluation. The need for evaluation is not questioned but what may be important is whether the school district policymakers and decisionmakers become concerned about the status of their young people with respect to the desired outcomes of career education.

3) Specific goal oriented strategies should be developed early in the project that are designed to move the activities over into the educational mainstream. Participation in proposal development and in the specification of the above strategies should include administrators, teachers, and members of the community. Specific local monies should be used or phased in early in the project to cover those areas for which local funding will ultimately be essential.

4) Close ties should be established with State and national levels and a level of flexibility should be maintained that will permit the project to adapt to overall school district plans.

5) In a more generic sense, career education moves from project status to a program status when the necessary community resources are coordinated to meet total human resource developmental needs. (Note: community resources is a broader concept which includes human resources.)

Assuming that career education, in a generic sense, is a concept involving coordination of resources and not an end unto itself, local and State educational agencies must view themselves as just one of many community institutions involved in career education. Career education involves the development of human resources. Other agencies, institutions, and organizations, such as churches, parent groups, labor unions, business organizations, chambers of commerce, governmental

agencies, Jaycees, and public and private education at all levels must become involved cooperatively in the career education concept if it is to succeed. Certain elements of career education are already operational in our instructional institutions under the terms cooperative education, hands on work study, internships, and clinical experience. However, there exists very little coordination of these efforts, in general. The premise that career education involves the development of human resources is consistent with the U.S. Office of Education's decision to incorporate the Office of Career Education with the Commissioner's office and not to append it as an additional program bureau. In such a position, career education can and should coordinate the charge of those sections related to human resources that now exist in the constitutions, charters, bylaws, etc., of the myriad organizations in our society. Someone must take the initiative to insure that all our resources are involved to the limit of their capacities.

Because career education currently is funded through the U.S. Office of Education, it would seem reasonable to assume that in at least the initial stages, action to move out into the community be initiated by the local career education director. Eventually, the term career education probably will be phased out, as total coordination across all community resources is accomplished. Depending on local geography, business climate, and population, the ultimate responsibility for community human resource development, perhaps on the planning unit concept basis, should fall into other jurisdictions or perhaps be shared jointly by various organizations. For example, the mayor's office may be responsible in one locale; in another region the local superintendent of schools may be responsible; or perhaps the director of the local area vocational school may take that responsibility. In other locales various combinations may be arranged, to serve jointly, such as a labor union representative, a chamber of commerce representative and an educational representative. Whatever the case, the objective is a total coordination of the necessary community resources to make the best effort towards development of our human resources. (Editorial Comment: Item 5 has been added as the result of a minority viewpoint submitted after the conference by two participants, Dr. Lewis M. Abernathy and Dr. Edward H. Lareau. The editor finds that viewpoint worthy of inclusion in the proceedings.)

GROUP C

PLANNING, COORDINATING, AND DISSEMINATING
CAREER EDUCATION PROGRAMS AND PRACTICES

Chairperson:	Kenneth Densley Member, California Career Education Task Force Sacramento, California
Group Facilitator:	Wilbur Rawson State Director of Exemplary and Special Needs Programs Topeka, Kansas
Resource Person:	G. M. Stevens Senior Program Officer U.S. Office of Education Region IX

WORK GROUP FACILITATOR REPORT

Wilbur Rawson

I would like to thank the leaders of our group but I would not quite know where to start because we have managed to go through three this week so far. For various reasons we have lost leaders. Mr. Stephens, I do not know what we would have done without you. Our charge was to react to issues and problems in planning, coordinating, and disseminating career education programs and practices at local, State, and national levels. This was a "biggy." I could spend all morning telling you the things we did, how much writing, how much thinking, and how much planning went into this. We did break into groups and we will try to summarize what we have done. There were major concerns that we felt were really important to about three areas. I was looking at them after we decided on these and it is rather ironic that they really each one fall into each of the three areas that we discussed.

Our first major concern is more or less directed to Billy Pope's staff. If I were a member of his staff and were going to have to edit this, I think I would quit this afternoon.

When you get all these materials together you are going to have a mountain of information but editing it is going to be difficult. It was a major concern in our group that we know what happened and what went on here at this conference. This information, when it is edited and compiled, should not just be sent back to national or State agencies and lost. We want to see this information. We want to be able to show it to the people in our districts and say "This is what we did" in [illegible]e days we spent here in Dallas. These are the things we took into [illegible]sideration and the things that we tried to plan for career education. It is important that we see these things as soon as possible. We would like to have them within a few weeks. We surely do not want to wait until next year to see them. This was our first concern.

Our second concern is that we would like to see a set of guidelines for career education develop from what we have done here. This has been brought up before and it was still one of our concerns, especially for coordinating programs. If we could have a set of guidelines, the people who are starting new programs would not have to reinvent the wheel everytime. They can look at what has been done. They can see the things suggested by other programs. And if we get these guidelines we are concerned that they do not become static and stale. We want them to be continually updated and reevaluated by groups such as we have here.

Our third concern was the establishment of a central clearinghouse for the dissemination of ideas, activities, and materials. Different agencies and people that deal with career education feel pulled in about

three or four different directions. We felt if we had one central office where all career education information could be sent, then we might get all the information we need from one place. In addition, the information we received would be uniform. This is important, especially for a national look at career education.

The work group on Planning, Coordinating, and Disseminating Career Education Programs and Practices addressed individually the questions submitted by the survey respondents. The questions which were submitted and the work group response to each is included at the end of this report. The responses are arranged in four broad groups; namely, 1) General problem areas, 2) The role of the State Department of Education in career education, 3) The planning, development, and implementation of a K-Adult program, and 4) The development of a system of dissemination and diffusion of career education.

WORK GROUP REPORT

Career education is intended to produce clear and measurable effects on students. Consequently the planning of career education programs must be based on intended student outcomes. Therefore, it is critical from the very beginning to establish what the student outcomes are and gain commitment to them from students, parents, teachers, and the community at large.

Once the goals have been prepared they need to be translated into behavioral statements which are clearly measurable. This will allow for an assessment of present performance versus desired performance. The result of such an effort will be a statement of need.

Once needs have been determined, priorities can be established and program development can begin. It is important to remember that career education programs will need to operate under predetermined constraints and limitations existent in local schools. For example, career education proponents do not want programs outside of the ongoing educational programs. On the other hand, individuals in schools charged with providing education (teachers, counselors, etc.) already have specific content which they intend to cover. They feel that to add career education would necessitate the elimination of already established content. Consequently, career education planning must demonstrate how career education is identical with good teaching in various subject areas. In planning career education programs, it is necessary to work with local schools to demonstrate how career education goals and objectives can be incorporated into existing instructional and guidance programs. Furthermore, it must be shown how this can be done without doing violence to existing content and, in fact, that such inclusion strengthens what is already being taught.

SUMMARY OF GENERAL PROBLEM AREAS

AND POSSIBLE SOLUTIONS

Problem: To identify clearly the student outcomes intended to be reached through career education programs.

Solution: U.S.O.E. has produced, in the draft guidelines for evaluation, a suggested list of student outcomes. These should be used in planning career education programs. At the local level an effort should be made to demonstrate the relationship between career education goals and the existing goals of the district.

Problem: To identify clearly the priority needs in career education so as to be able to focus efforts when the need is the greatest and where the possibility for success is high.

Solution: A comprehensive needs assessment at all levels needs to be undertaken but particularly at the local level. This assessment should focus on the present level of attainment of student goals and on the priorities that should be attended to first. Groups to be assessed should include parents, students, teachers, and the community at large.

Problem: To develop programs to meet priority needs (achieve student goals) which will be operable in the local school setting.

Solution: Local schools must be involved in the program development process. The constraints and limits of the local school must be considered in program development. A systematic planning format should be provided to assist local schools in this effort. Additional various program alternatives should be provided which local school staffs can adopt or adapt. However, local schools should always be allowed to develop programs unique to their setting.

Problem: To install programs which have been developed.

Solution: Systematic planning should extend to the installation level. Care should be taken to determine the barriers to successful program installation and operation. Once these have been identified support effort can be planned; e.g. staff development, materials purchased, etc. Resources can then be allocated and specific staff responsibilities assigned. (See attached page entitled "Systematic Planning for the Installation of Career Education."

Problem: To evaluate progress and to modify programs based on evaluation information.

Solution: The program evaluation design should focus on all levels of program operation. Student goals and program goals should be evaluated. Process objectives should be stated and evaluated. Planning should be responsive to evaluation data and replanning should reflect efforts which will be made to correct errant situations.

Recommendations

1. All levels (local, State, national) should continue efforts to define clearly student outcomes and to objectify outcomes.

2. State and national efforts continue and increase to locate and develop instruments sensitive to the outcomes of career education which can be reasonably administered.

3. State and national efforts continue and increase in the area of program development based on the student goals of career education.

4. Regional offices consistently encourage projects to modify plans based on evaluation data whenever the data becomes available.

5. Consideration be given to five-year projects in career education to allow for more careful planning of program development and installation.

Management or operational objectives are necessary to facilitate the installation of career education at the local level. These objectives are also essential to the kind of evaluation (covering the context, the input, and the processes) which is essential to effective management decisionmaking.

Although certainly not all encompassing, the work group felt that the following are a minimum of areas for which management or operational objectives should be developed and, ultimately, evaluated.

1. Context of the program. The local conditions should be described clearly and contingency objectives developed which anticipate the outside restrictions in which the program may have to operate. In addition, operational objectives should be developed which provide that program activities are reviewed periodically and adjusted as necessary to insure their congruency with the stated purposes of the program.

2. Program input. Objectives should be developed for the necessary or desired input of human, physical, and fiscal resources to the operational program.

With respect to human resources, specific objectives should be developed (1) for the administration covering who is to be involved, how many administrators are to be involved, and where each fits in the total line-staff of the system; (2) for the implementation personnel covering the teachers, counselors, specialists, etc. to be involved and how they will be brought into the program; and (3) for the external evaluators covering their identification, when they will become involved, and how they will be involved.

With respect to physical resources, objectives should be developed for the acquisition of the essential facilities, equipment, and instructional materials.

Objectives for the input of fiscal resources should be developed so that they support adequately the time frame of the intended ongoing program activities as well as the initial planning and implementation stages.

3. Program processes. Operational or management objectives should be developed (1) for legal facilitation such as school board approval; (2) for the inservice training of administrators and implementation personnel; (3) for client scheduling, including how many students, how they are to be selected, and how much exposure they will receive to program activities; and (4) for evaluation scheduling, including what data will be collected, when it will be collected, who will collect it, and how and when the results will be available to the program managers for their decisionmaking purposes.

4. Program products. Operational objectives should be developed for assessing the impact or the secondary effects of the program on the community as a whole in addition to whatever evaluation is effected of student outcome.

COORDINATION OF CAREER EDUCATION PROGRAMS

Work group participants outlined the following concerns to which coordination activities should be addressed at the local, State and national levels. Specific suggestions for dealing with the concerns were made by the group only for the local level.

Local

1. A system-wide commitment to career education concepts should be secured from the board, the administration, the faculty, the students, and the community. For this purpose a written plan of action should be prepared and implementation approval and authority secured from the administration.

2. System-wide professional staffing of all career education activities should be accomplished. This will require the identification of roles and responsibilities to be served and a knowledge of which staff members are best qualified to initiate the plan.

3. A system-wide professional development program should be conducted. The staff development program should be designed and conducted to meet the needs of the professionals that have been identified in an early assessment of staff needs.

4. System-wide consensus of a conceptual framework for career education should be sought. This will require the development of concept statements and objectives for career education; their dissemination to the professional staff and other concerned public; the entertainment of reactions to the concept statements and objectives; their possible revision based on public reactions; and their final broad-scale communication.

5. A level of funding should be secured that permits the accomplishment of local objectives. This will require the setting of priorities, the allocation of available funds against the priorities, and the maintenance of an acceptable budgetary record system.

6. The communication methods of the local education agency should be identified; a formal, written system of communication established; and a career education advisory council formed.

State

1. Commitments to career education concepts should be secured from the State staff, the State Board, and the State legislature.

2. Plans should be developed and activated for the coordination of activities across departments in the State education agency.

3. State-level objectives should be developed and adequate staff allocated for the accomplishment of those objectives.

4. State-level consensus should be sought for a conceptual framework for career education that is deemed desirable for that State.

5. State-level objectives should be prioritized and available funds allocated against those priorities.

6. The communication methods of the State education agency should be identified and a written plan developed for communicating information about career education.

7. The role of the State education agency in the career education movement should be defined and communicated clearly within the agency as well as to local districts and to the national level.

National

1. The U. S. Office of Education and the Congressional commitment to career education concepts should be secured.

2. National objectives for career education should be developed, prioritized, and staff should be allocated that will permit their accomplishment.

3. Available funding should be allocated against the national objectives which will permit their accomplishment.

4. The communication methods of the U. S. Office should be identified and a written plan developed for communicating information about career education.

5. Relationships of the national, regional, and State levels should be clarified within the career education movement and efforts made to maximize the use of all available resources.

DISSEMINATION

The work group raised the following concerns at the local, State, and federal levels for programs designed to disseminate career education methods, materials, and other products. The issues were raised against a backdrop of two basic assumptions; namely, that planning for dissemination occurs early and involves contributions from all levels of staff, and that evaluation of the processes and products to be disseminated has already occurred.

1. A strategy for the allocation of dissemination funds should be outlined prior to the development of a contract for dissemination.

2. Target groups should be identified carefully, recognizing the States' organizational differences.

3. Channels should be established for effective distribution.

4. The most effective possible facilitators should be identified and used.

5. Copyright procedures and restrictions should be clarified and stated clearly.

6. Programs and projects should arrange time and resources for visitations to projects outside the district or State.

7. Even though dissemination might be contracted out, transportability factors should remain a major consideration throughout all dissemination activities.

8. The dissemination efforts must address not only the merit of the product but also reasonable replication methodologies.

General Problem Areas

Q. Is there a program to advise textbook companies in the development of textbooks and related materials infused with the concepts of career education?

A. A definite concern about the type of career education information being used in textbooks is apparent. It is recommended that each textbook company include career education people on their staff. These people need to communicate conscientiously with educators to discover what their needs are. Companies are probably complying with standard guidelines because of the competitive nature of this industry. In the event that the individual companies are not meeting the standard expectations and needs of national, State, and local guidelines, the establishment of a commission to review these materials before publication may become practical.

Q. How do we secure the best information on supply and demand in employment and training?

A. In the career education area we need more concern with trends and directions rather than specific data. The vocational programs under the career education structure often need more specific data. This information should include all types of occupational opportunities information and should deal with these in terms of clusters. It is generally felt that the State plan which deals through advisory committees primarily with vocational information is not adequate and is too narrow. It is recommended that information be secured at local levels through advisory commissions. This information should be fed into some type of State coordinating board who, in turn, will supply the national office with relevant data to be compiled for dissemination to the local level. This would create a continuing chain of communication and information among local, State, and national agencies.

At present the Department of Labor is revising their coding methods. The DOT and SIC System will be replaced with a system that is congruent with vocational education programs. The Department of Labor is also about to fund Occupational Information Systems in ten States which will deliver current employment data to students and other clients. Educators need to make greater utilization of Department of Labor and State employment services.

Q. What are the priorities in terms of developing a manpower system?

A. Manpower systems should be developed at local, State, and national levels, respectively, through clustering.

Q. With the Office of Career Education now reporting to the U. S. Commissioner, how will it relate to Part D and to other career education programs? How do they relate to the Chief State School Officers?

A. At the present time this is a very informal relationship. Each group goes its own direction. Not all Part C and Part D monies are career education. In some States they are vocational. Our chief state school officers have a commission of 12 people under the direction of Dave Jesser to explore the problem. It is recommended that some type of committee be established within these groups in an effort to bring them together in a more coordinated fashion.

Q. What can be done to improve the communication between the State coordinators of career education and the Part C and Part D project officers?

A. Again there is a need for all career education people to combine their efforts. It is recommended that a State Deputy Commissioner for Career Education be appointed to facilitate lines of communication.

Q. Does O.E.'s direct funding to local education agencies help or hinder State effort? Does it disrupt statewide efforts of career education development?

A. This funding procedure could cause difficulties for States if local agencies do not use these monies to fulfill coordinated State guidelines. On the other hand, this procedure could generate more funds for projects. It is recommended that these monies flow through State agencies of education so that coordinated efforts can be maintained at that level.

Q. Have federal, regional, and State vocational educators recognized the role of vocational education in career education or do they desire to control it?

A. In the beginning, career education was treated as an entity, separate and apart from other forms of education. It is the consensus of this group that through definition and usage career education is now being accepted and recognized by educators as an all encompassing program.

Q. Should we not have better coordination between the groups working toward career education at the federal level when it comes to funding? Definitions? Implementation strategies? State program monitoring?

A. Yes, we should.

Q. How can we have better sharing of developed materials when small States do not have the funds to duplicate 250 copies for dissemination?

A. It is recommended that each State Career Education Coordinator be supplied with one copy of any materials developed at local levels. This means that any local program would need to produce approximately 50 extra copies of their work and mail one copy to each of the State Career Education Coordinators. The State agencies would disseminate copies to their respective programs as requested or as the need arose. This provides State agencies with the opportunity to review and evaluate newly created materials.

Q. How do we insure that coordination at the federal and State levels results in leadership which does not create conflicts at the local level?

A. It is recommended that the local programs develop a plan with their State agency and that the federal agency lend support to their plan of action in any way possible.

Q. How does a "right to read," "student loan program," "developing institutions," or "education for the handicapped" program support or enhance the career education philosophy?

A. These programs support and enhance the career education philosophy because career education is all encompassing and pulls all programs together. Career education is all education.

Q. How should materials be developed for career education--locally or commercially?

A. Materials should be developed at the local level when at all possible.

The Role of the State Department of Education in Career Education

Q. What should be the role of the State Department of Education in a career education program? What is its function in a Part D project? What steps have been taken to achieve a State Policy relating to career education?

A. 1. Leadership
   a. State goals and priorities
   b. Set guidelines
      1) Implementation
      2) Evaluation
      3) Staff Development
         a. preservice
         b. inservice
      4) Materials development
   c. Coordination of exchange of ideas and/or consultant services
   d. Coordination with other education programs
2. Legislation action, position papers, and State regulations are steps taken to achieve a State policy relating to career education.

Q. State-adopted textbooks, generally speaking, are not career oriented. What could State Departments of Education do to help with the situation? What can local units do? Is there a role for U.S.O.E.?

A. It is generally true that State-adopted textbooks are not career education oriented. State Departments of Education could establish a set of guidelines for future development for dissemination to textbook companies. Local units can provide feedback through evaluations and by purchasing texts that meet local needs. U.S.O.E. could establish resource centers, offer advisory help, and disseminate materials from a clearinghouse.

Q. When moving career education statewide, what approaches have been employed successfully with a limited State staff to provide local districts with indepth individual attention for planning? e.g. one State consultant and a secretary.

A. This cannot be done effectively. Providing individual attention for planning, coordinating, and disseminating is impossible with such a small staff.

Q. How does one coordinate career education within the entire State Department of Education? A central location or subcenters in each bureau? How do you establish linkages with local education agencies? How do you coordinate a dissemination system from the State level to the LEA's?

A. Career education must become the thrust or concern of all departments of education through the coordinating efforts of a Career Education Department. With respect to the location of a career education staff, the individual needs of each State must be met. Linkages with local education agencies must be established through local regions. A coordination dissemination system from the State level to the LEA's could be established by supporting demonstration sites through State staffing.

Q. What is the State's role/responsibility in the planning and operation of the Commissioner's half of Part D projects? What decision-making authority should the S.D.E. have? What technical assistance should the S.D.E. provide? What information should the S.D.E. provide? What input does the S.D.E. have in proposal development? Should proposals be congruent with the State's philosophy of career education?

A. States should have veto power over initial grants. They should provide technical assistance as feasibly possible. They should provide information as feasibly possible. State Department of Education input in proposal development, however, is by invitation from State or local LEA. Yes! Methods should be developed to insure that proposals are congruent with the State's philosophy of career education.

The Planning, Development, and Implementation of a K-Adult Career Education Program

Q. How do you or should you articulate between secondary and post-secondary programs? What approaches have been successful? What follow-up techniques have been used?

A. There has been little success in articulation between secondary and post-secondary programs because the national level ignores this issue. Governing boards for post-secondary vary significantly; therefore, it is difficult to make a singular recommendation. There is some funding K-14 but little success has been enjoyed in this area.

Q. How successfully has the U.S.O.E. requirement for secondary-post-secondary articulation been met? What are successful examples of coordination? Are they superficial or do they help to maintain the status of the career education program? Do they continue past the federal funding?

A. Generally "No!" on all sections of this question.

Q. What strategies or methods should be employed for designing and implementing a logical and sequential learning experience, K-14. What

role should an advisory council play in this process?

A. The strategies and methods employed for designing and implementing K-14 learning experiences should be a uniform, sequential (nonrepetitive) approach. Example: Elementary - Awareness
Middle School - Exploratory
High School - Preparatory
There should be a scope and sequence for and with the three above levels. A State level determination of the common idea of career education with objectives should be established from which local areas should select those objectives suited to their local needs and their local scope and sequence. The advisory council should provide review, assessment, and recommendation.

Q. Can the purposes of career education be achieved in the absence of scope and sequence by utilizing the so called "teachable moment" approach where teachers are encouraged to bring out career education concepts wherever and whenever they feel they can? How important is it to systematically expose students to a comprehensive array of career options and opportunities?

A. Strong "No!!!" The "teachable" moment is not enough. Comprehensiveness probably doesn't make much difference at the elementary level. It becomes important when students begin to make definitive decisions; therefore, it becomes increasingly more important. Note: structure should be in response to student's needs.

Q. Have we overplayed the notion of infusion to the point that some schools have been made to feel like failures if they hold a career day or teach a class in career orientation? Is infusion the only vehicle? Can we realistically infuse all of the goals and objectives of career education into the present curriculum?

A. No! We haven't given teachers a means or examples of how to infuse. Infusion is not the only vehicle but it is the most preferred in giving cues for further exploration in careers. Other successful examples include CIS Systems (which is a revision of the DOT Career information) and career education courses. Curriculum is only one delivery vehicle. Guidance and placement may also become infusion vehicles.

Q. What are the planning needs for career education? What should be the content of planning? Should it include facility needs at the various levels? Are there specific levels where special facilities are required? Do local, regional, and State agencies plan cooperatively? What

strategies have been used to initiate planning? What resources are required?

A. Planning needs for career education must include a goals-based design including: Needs Assessment, Objectives, Program Strategy, and Program Evaluation. It is desirable that local, regional, and State agencies plan cooperatively but this rarely happens except under crisis or forced decision making. Available funding and contingencies have been used to initiate planning. Required resources include funds, supportive staff, materials, supplies, and guidelines.

The Development of a System for the Dissemination and Diffusion of Career Education

Q. Should we or should we not develop a system of dissemination and diffusion for career education? Is a national network for dissemination viable? Which elements of curriculums are transportable across State, district, and school lines? Objectives? Learning experiences? Organization structures? Evaluation devices? How can unwarranted duplication be avoided?

A. Yes, a national network for dissemination is viable as long as such criteria as goals, objectives, and materials are established, tested, and met for maximum quality (educational content). Objectives and needs are unique from system to system; therefore, the transportability of materials may only be measured by their ability to meet objectives. ERIC and AIM/ARM should be used to avoid unwarranted duplication; however, these systems will require some sort of material information network.

Q. What is happening regionally and nationally on cross-fertilization of projects? What is the status of the assessment of developed products for national dissemination?

A. The timeline from receiving valid material to publication should be shortened. Channels for cross fertilization do not adequately exist, and the screening of developed materials is nonexistent.

GROUP D

EVALUATING CAREER EDUCATION PROGRAMS

Chairperson: Alice Scates
Senior Program Officer
and Evaluation Specialist
U.S. Office of Education

Group Facilitator: Elvie Arterbury, Director
Partners in Career Education Development
Dallas, Texas

Resource Person: Ellen Lyles
Senior Program Officer
U.S. Office of Education
Region IV

Preconference Survey Results on Evaluation

Respondents to the preconference survey on current issues in career education were concerned about questions that fell into about four general categories with respect to evaluation. These were 1) the role of the U.S. Office of Education in the evaluation of Part C and Part D projects, 2) the content and design of career education evaluation, 3) the status of instrument development for the evaluation of career education programs, and 4) some general and philosophical questions with respect to the evaluation of career education programs.

Questions with respect to the role of the U.S. Office of Education in the evaluation of the federally-administered Part C and Part D projects focussed primarily on the publication, Handbook for the Evaluation of Career Education. Respondents wanted to know:

a) On what philosophical base the handbook was developed, how it was validated, and whether it was too restrictive,

b) Whether it was reasonable to assume that we could measure product in terms of student outcome at this point, and

c) What allowances were to be made for project variations that do not fit all of the elements of the handbook?

Those questions having to do with the content and design of career education evaluation were:

a) Should or should not the design include all of the elements of inputs, processes, and products?

b) Which of the many input factors are measurable and critical to an assessment of career education?

c) How can information about the processes of career education be collected to insure validity?

d) How are the interfaces of inputs, processes, and product measures to be dealt with?

e) What are the appropriate process factors in career education? Are they curriculum, evaluation, dissemination, diffusion? Or, are they student treatments as actually experienced by the child?

With respect to instrumentation for career education, participants wished to discuss:

a) What are the additional instruments that we need?

b) What instruments that now exist have been successful in measuring differences?

c) How does the career education practitioner establish criteria to be used in selecting instruments?

Some of the general and philosophical issues raised by respondents were:

a) Can product assessment be effective prior to the full development of an educational intervention?

b) How can long range impacts be isolated as attributable to an educational intervention? which impacts?

c) What evaluation approaches are recommended for projects operating independently of federal funds?

WORK GROUP FACILITATOR REPORT

Elvis Arterbury

There were a lot of good issues in our group. We probably spent a third of our time trying to decide what those issues were and how we might address them. It finally boiled down to three concerns: first, concerns of why evaluation; second, the concern of roles and responsibilities provided in career programs and experiments in career education; and a third related to the issue of instrumentation. Throughout the discussions I think that most of our energies and anxieties were centered around the guidelines provided to all of us for evaluating Part D projects. I still remain unclear as to whether we gathered here to praise them or bury them. We spent a good deal of time talking about them and I think the concern about those guidelines is reflected in at least a couple of the reports. We finally decided on our issues and then broke them into three separate groups. My participation was in but one of those groups. Each group prepared a brief, written position paper as to what they concluded. If you will forgive me I will read those papers. I cannot speak about the other two groups other than the paper they handed me. It is difficult to paraphrase them or embellish much. I guess the final qualification is that although I am the spokesperson or reporter for the group, that does not necessarily imply full acceptance of the three position papers. The evaluators, obviously, did not criticize themselves.

The first section of the report has to do with the instrumentation issue. This group consisted primarily of practicing evaluators and their concerns centered around the characteristics of sound instrumentation.

The second section of the report deals with the question of "why evaluation?" Our major point was that across the different types of decisions, levels of decisionmakers, and purposes to be served, there are a multitude of techniques and tools and arrangements by which evaluation occurs. Thus in addressing the why, this group concludes that the U.S.O.E. guidelines for evaluation serve essentially but one principal purpose at one level for mainly one type of decision; that is, the accountability purpose, the iterating decision at the federal level. We felt that addressing the question of "why evaluation", looking at levels, purposes, and types of decisions, and placing them in perspective with respect to where the guidelines fit was a helpful exercise.

Finally, a group spent some time worrying about federal, State, and local roles and what they chose to call career education experiments. They say this: federal, State, and local purposes in the frontiers of career education can be best accomplished through a pattern of dual responsibilities for experimentation. Our recommendations are intended to gude the establishment of that pattern, that

is, the pattern of dual responsibilities. The group structured their position paper into two levels of experiments--not surprisingly, the federal level being one and the local level being the other.

The group concluded with the comment that the present draft guidelines for the evaluation of career education programs from Development Associates, August, 1974, violate all the principles underlying their recommended experiments.

WORK GROUP REPORT

Instrumentation

The following presentation is intended to provide the practitioner with a guideline for deciding on instruments to measure elements of career education. The factors have not been given priorities, and it is the users prerogative to determine what trade-offs to make. Three major considerations are suggested--validity, reliability, and utility.

Validity

1. Content validity project.
   Which specific project outcomes does the instrument measure?
   How many and which test items are invalid because they include content not covered by the instruction?
2. Concurrent and predictive validity.
   Have these validities been established against criteria which are consistent with the project's objectives?
   What use can be made of these findings?

Reliability

For commercially available tests has the reliability been established against a population which is sufficiently similar to that of the project?

If not, a test of reliability should be considered.

If the test is locally developed, reliability should be established.

Utility

1. Ease of administration (clarity of administration instruction and equipment necessary.)
2. Time required to administer.
3. Quality of the description of what the instrument purports to measure.
4. Cost
   Can the test be reused?
   Can it be locally scored?
5. Norming
   Local
   National.

6. Level of reading ability required.
7. Are the results valuable to decisions for individual students or only for group norms.

A pilot test of chosen instruments is suggested to determine and eliminate possible testing pitfalls which have been overlooked.

WHY EVALUATION?

Evaluation provides information for decisions to improve and prove programs. These decisions have been categorized (paraphrased from the CIPP Model, Stufflebeam, et al.) as planning, designing, monitoring, and iterating. These four types of decisions relate to specifying intended ends, intended means, actual ends, and actual means. This relationship is depicted below.

PROGRAM DECISIONS

	ENDS	MEANS
INTENDED	Planning	Design
ACTUAL	Iterating	Monitoring

Basically these four decisions relate to the straightforward questions of: 1) where should a program go, 2) how should it get there, 3) is it following its plan, and 4) how well did it achieve its results?

Each of these decisions can be made at different levels (e.g., local, State, and federal) and for different purposes (i.e., improvement and accountability.)

Across these different types of decisions, levels of decisionmakers, and purposes to be served, there are a multitude of techniques, tools, and arrangements by which evaluation occurs. These range from intuitive guesses to empirical results.

Thus, in addressing the "why" question, our group concludes that the infamous Guidelines serve but one principal purpose, at one level, for one type of decision; those being the accountability purpose, the iteration decisions, at the Federal level.

FEDERAL, STATE, AND LOCAL ROLES IN CAREER EDUCATION EXPERIMENTS

Federal, State, and local purposes in advancing the frontiers of career education can be best accomplished through a pattern of dual responsibility for experimentation. Our recommendations are intended to guide the establishment of that pattern.

Federal Experiments

The Federal Government, exercising its research and development role through USOE or NIE, should sponsor and finance large-scale field experiments characterized by:

1. Federally - selected objectives
2. Federally - selected procedures
3. Federally - selected evaluation instruments
4. Federally - selected evaluation designs
5. Federally - selected evaluators
6. Participation by the evaluators from the very beginning of the experiments
7. Voluntary participation by State education departments and, with the approval of the State education departments, voluntary participation by local school districts
8. Ample advance notice and complete disclosure of the full federal plans for the experiments to the volunteering State education departments and local school districts before the experiments begin.

At the conclusion of each experiment the Federal Government should translate the findings into operational advice and transmit it to all State education departments for their own use and for forwarding to all local school districts.

Local Experiments

Simultaneously, the Federal Government should sponsor and finance experiments conducted by local school districts under plans developed by State education departments. The local experiments should be characterized by:

1. Locally - selected objectives
2. Locally - selected procedures
3. Locally - selected evaluation instruments
4. Locally - selected evaluation designs
5. Locally - selected evaluators

6. Participation by the evaluators from the very beginning of the experiments
7. Voluntary participation by local school districts
8. Ample advance notice and complete disclosure of the full State plans to the volunteering local school districts before the experiments begin.

At the conclusion of each experiment, the sponsoring State education department should translate the findings into operational advice and transmit it to the Federal Government for its own use and for forwarding to all other State Education Departments for their own use and for subsequent transmission to all local school districts.

The present Draft Guidelines For The Evaluation Of Career Education Programs (August 15, 1974) violates all the principles underlying these recommendations. The guidelines, in their present or modified form, should be used exclusively for federal experiments of the kind recommended above.

GROUP E

IMPLEMENTING CAREER EDUCATION AT THE SECONDARY LEVEL

Chairperson: Sidney C. High, Jr.
Director, Division of Career
Education Programs
U.S. Office of Education

Group
Facilitator: R. Robert Adkison
Ceres Unified School District
Ceres, California

Resource
Person: John Stahl
Senior Program Officer
U.S. Office of Education
Region II

WORK GROUP FACILITATOR REPORT

R. Robert Adkison

First, I have a message for Billy Pope. I would like to say to him that he can relax, that our material is neat, well organized, and loosely stated and will be transmitted in that order.

I would like to give special thanks to the subchairpersons in our group, Lee Thompson and Tom Schrodi, who handled the area of curriculum development, Matt Cardosa, who chaired the group on placement, and Jane Robertson, who handled the group that worked on guidance. We have some 20 pages of comments that I am going to turn in for a report. I have asked those groups to make a summary statement and that is what I am going to present to you.

Working with the area of curriculum in the implementation of career education at the secondary level can be kind of a traumatic process as there seems to be more resistance to implementing change at the secondary level than at the junior high level. A great deal of thought and foresight and planning needs to go into the implementation of career education or anything similar at the secondary--meaning both junior and senior high school--level.

Steps for implementing career education are listed by the subcommittee on curriculum as follows. First it was felt that one should coordinate the career education program with the superintendent and the school board. This has been stated berfore; but I think it should be stated in each case because, without that kind of commitment, success will be spotty and short-lived, in all probability. Second, organize an advisory council composed of citizens from the community including students, parents, and businessmen in industry. You should have them approved by or at least endorsed by the board of trustees or the board of education in the local school systems, so that there is an official liaison between the school system and community. Three, coordinate the career education program with the building principals. This is something that has in some cases been a difficult area. The district may be committed. The board may be committed. But if the building principal does not constantly supervise and promote the development of this curriculum, he is going to lose the ball game right there; the school district will lose also.

Coordinate the career education program with the department chairpersons and the curriculum specialists. These are the people on the front line and they are the ones who are going to be convincing, if that is an appropriate phrase. They must be convincing in order to influence the teachers who will be implementing the curriculum in the classroom.

We talked about change in our group and this is probably an area where change is most difficult. Secondary schools tend to be more traditional than elementary schools. Change of this type becomes a major undertaking to many of them. Providing inservice to meet the needs of teachers in all subject areas is one of our recommendations. Teachers should identify what they are presently teaching and, through inservice programs, integrate the career education concept into the curriculum. They must have both a base of curriculum and lesson plans developed around career education and there is a lot of assistance needed here. This is where your curriculum specialists are going to have close involvement. One should integrate the career education concept into the curriculum using a large variety of activities so that interest, motivation, and involvement are a major part of the activities planned. Use department chairpersons as lead teachers or have the department chairperson assign a lead teacher. This individual is specifically responsible for implementing the career education concept into the curriculum. You need to provide over-the-shoulder assistance to each teacher as needed so that they have the confidence and security necessary to move the change along. I think that as an overview, those are the detailed responses to the questions we had on implementing career education into the curriculum.

Another area that we dealt with was that of placement--the placement of students in the world of work. The committee reviewed the questions and made certain assumptions. First, they limited their reactions so that they related only to job placement and not educational placement. This was a constraint which they placed upon themselves. They then determined that the questions could be answered by assuming the existence of a clearinghouse to handle all placement activities. One specific suggestion is how that clearinghouse can be implemented. Since this data will be used on a national level, our recommendation must be suggestive and general in nature.

Another section dealt with was guidance. I have a rather comprehensive report there also but I am going to sum it up into one statement. No longer can a counselor operate only on a one-to-one basis. We wrestled with this problem rather extensively; and, because of the shortage of personnel and people who are trained in career guidance and counseling, there has to be new types of training for them. It was felt that most of our counselors or many of our counselors are not trained in the group processes of counseling. This is basic and fundamental if we are to succeed in guidance and counseling for career education.

Career education dictates that counselors develop the competencies of a resource person. Counselors must be involved in changing their own roles. That is a rather significant statement. It is felt that the job descriptions are too often dictated by people other than those in counseling. Maybe counselors' roles have developed historically and do not include the kind of tasks which are necessary for career education to be successful. Counselors must be involved in helping develop the guidance part of the instructional program. It was felt that whenever the cluster

teams, or whatever you wish to call them, come together to develop the instructional program for career education at the secondary level, counselors should be involved. The guidance personnel must literally be sitting in those groups as participating individuals on a continuous basis or the guidance components for career education will not be implemented. This is one of the reasons why it was stated that the guidance personnel must be instrumental in writing their own job descriptions and changing their own roles.

Secondary Curriculum

The work group on secondary curriculum for career education feels that the following steps are essential to successful development and implementation at this level:

1. Coordinate the career education program with superintendent and the school board.
2. Organize an advisory council composed of citizens from the community including students, parents, businessmen, and industry representatives and have them approved by the Superintendent and Board of Education.
3. Coordinate the career education program with the building principals.
4. Coordinate the career education program with the department chairpersons and curriculum specialists.
5. Provide inservice to meet the needs of teachers in all subject areas.
6. Teachers identify what they are presently teaching and, through inservice programs, integrate the career education concepts into the curriculum.
   a. Teachers must have a base of curriculum and lesson plans.
   b. Staff analyzes the lesson plans to insure comprehensiveness. (Refer to Attachment A and Attachment B.)
   c. Teachers integrate the career education concept into the curriculum using activities.
7. Identify department chairpersons as lead teachers or have department chairperson or the principal assign a lead teacher.
8. Staff and lead teachers provide over-the-shoulder assistance to each teacher as needed.

The following section represents the work group's suggestions in response to questions raised in the preconference survey that were related to the secondary career education curriculum.

Q. How might teachers or counselors get students involved in planning career programs to meet their own need?

A. a) Needs assessment surveys or student interest survey.
   b) Advisory council members.
   c) Involve them in career education youth organizations.
   d) Allow students to do research into careers in academic and vocational subjects.
   e) Allow students to explore subjects in depth.

Attachment A

Career Education - John Geston
Central High School
Devil's Lake, ND 58301

Outer circle provides treatments for each segment. C.E. staff provides C.E. strategies - sequentially - so as to avoid duplication.

Social Science Department identifies the grade level (7-12) where these items are touched upon and to what degree.

f) Give students the opportunity to explore occupations with personnel from business and industry, fathers, mothers, and/or others.

Q. How does one implement effective career education inservice at the secondary level for all teachers?

A. a) Provide an opportunity through a summer inservice program for teachers to explore occupations in business and industry.
b) Allow teachers to shadow business and industry personnel.
c) Hold summer inservice to infuse the career concept into the present curriculum.
d) Provide release time for teachers during the school year with substitutes being paid by the project (to visit other teachers, schools and different levels of education, business and industry, etc.).
e) Arrange for credit on salary schedule or college credit.
f) Pay substitutes for teacher to assist in inservice program where that teacher is providing the training.
g) Conduct inservice training programs in conference rooms of business and industry.
h) Use teachers teaching teachers.
i) Use teachers to develop curriculum guides, list resource materials, etc.
j) Find the "teachable moment" in 8th grade science where key word such as "Neon" results in a technician using or working with neon signs being brought in.

Q. Should parent approval be secured for involvement in career education programs?

A. a) No--because the career education concept should be an integral part of the total curriculum.
b) One might have a program in the school to educate the parents to the concept, however.

Q. What methods have been successful for "infusing" career education elements into the secondary program?

A. a) Inservice.
b) Get students involved.
c) Involve the community personnel.
1) Use T.V. time to air films citing needs for career education.
2) Spot promotions on T.V. showing need for career education.

3) Provide programs for service clubs--slides, movies, students, etc.
4) Use success stories if available.

Q. Is the career education process scattered randomly or is it in all disciplines at the secondary level?

A. a) In most cases it is probably scattered because one generally starts with interested teachers.
b) With proper leadership all teachers should integrate the concept into their ongoing curriculum.

Q. Should curriculum changes towards career education be adopted only in pilot schools throughout a district?

A. Generally it is started only as a pilot in one school so it is manageable but the ultimate in career education would be to have it in all the curricula in every classroom in the district.

Q. How is current curriculum made relevant to future job placement?

A. a) Through surveys.
b) Placement and follow-up.
c) Needs assessment and long-range needs.
d) Involving community leadership especially those that will eventually hire the students.
e) Including values or human relations occupational survival skills in the curriculum.

Q. Can the career curriculum involve the cluster concept at the senior high level?

A. a) Definitely--it is being done in some regions at the present time.
b) Community involvement can easily come about through clusters. (For information about one, write to Richard Gabriel concerning the communication and media cluster in the Junior High School, Des Moines Independent School District, 1500 Grand Avenue, Des Moines, Iowa.)

Q. What other career education resources are available for teachers, aside from development of new curriculum guides?

A. a) Opportunities to attend inservice meetings with various university groups, private organizations, State level meetings, local level meetings, national meetings, and other career education projects.

b) Professional magazines, etc.
c) Private companies will furnish materials and consultants--such as Bell Telephone, Coca Cola, etc.

Q. How can we bridge the gap between vocational education and academic education?

A. a) Interdisciplinary planning.
b) Visits by students and teachers to a comprehensive vocational department.
c) Courses entitled "math in construction", etc.
d) Career math.
e) Peer teaching--demonstration by high school students to other high school students or to junior high or elementary students.
f) Contract instruction between students and teachers.
g) Teacher education programs--provide the opportunity for academic and vocational teacher courses in college to assist teachers in understanding that every occupation requires skill training.

Q. How is the guidance component involved in the total education process?

A. a) Follow-up and placement.
b) Any teacher who is producing or providing career education activities is performing a guidance function.
c) Faculty advisors--assign 15-20 students to each for career advice.
d) Giving students individual counseling on understanding themselves and their abilities and limitations.
e) Provide counselors the opportunity to work with business and industry during the summer as interns.
f) Have counselors give more guidance to teachers who can in turn pass it on to the students.

Q. What are the roles of the academic teacher in a career education program?

A. a) Increasing career awareness of young people.
b) Bringing out career implications in subject matter in order to motivate students.
c) Every academic classroom is a career education classroom.
d) Work attitudes should be taught by all teachers.
e) Human values should be taught by all teachers.
f) Teaching decision-making skills.

Q. How do you change the content orientation of teachers?

A. You don't change content; you integrate career education concepts into the curriculum. Some suggestions for doing this are as follows:

a) Show teachers how to integrate career education concepts into their subject-matter areas by utilizing:
   1) Practicing teachers,
   2) Ongoing programs and practices,
   3) Existing resource materials, including textbooks,
   4) Methods that will keep teachers informed about current career education classroom activities,
   5) Different approaches with sample materials for developing instructional units.

b) Involve teachers in interdisciplinary curriculum development.

c) Work with teacher-training institutions on preservice programs.

Q. How are the career education needs of the disadvantaged and handicapped being met?

A. a) Through sheltered workshops.

b) Teach teachers of handicapped and disadvantaged--use SRA kits effectively and appropriately.

c) By teaching these students the characteristics of a good work ethic in order that they may become productive, contributing members of society.

d) By establishing work-experience programs in order that they may develop a salable skill which will aid them after their formal educational experience is completed. Placement and follow-up are needed.

e) By informing the business community of the potential and capabilities of these students so that the business community is cognizant of their abilities in a work world and the possible contributions they can make.

f) By using role playing situations, students can visualize a number of possibilities in which they can be participating members of our work force.

g) Teaching the problem method of solving situations
h) Understanding competencies needed in order to handle career education in the classroom.
i) Planning and delivering related academic skills as they are needed in occupational or vocational preparation programs.

Q. How can career education be expected to serve all students, when preparation opportunities are available in only traditional vocational careers?

A. It is a matter of semantics and depends on what society classifies as a salable skill. (For example: the career education concept believes that proficiency in English is just as salable a skill as proficiency in welding.) The above mentioned statement reflects that career education permeates all disciplinary areas.

Q. What is career education like at the high school level?

A. Career education at the high school level is a concept or process infusing and transcending all disciplinary boundaries of the curriculum. It encompasses all career education elements common to the elementary and junior high school levels; e.g., self-awareness, decision making, career-awareness, appreciation and attitudes, educational awareness, exploratory activities, and economic awareness.

Emphasis at the high school level should be placed on career preparation, be it job-entry level, preparation for further skill training, or advanced education. Career preparation should include a variety of teaching and program strategies, providing students with career experiences in the classroom, in school laboratories, and in the community.

In order to assist the student in reaching his career objectives, placement activities--including career placement skills--are an integral part of the high school career education concept. Through career education activities, students can perceive their individual lifestyles and lifetime skills through a better understanding of their own personal and community needs.

Q. Who assumes leadership role of career education at the high school level?

A. As in all aspects of high school operation, the principal must be allowed to assume leadership of career education in order to avoid usurping his authority and so that all members of the faculty

know that he is in favor of the program. Depending on size, structure, and funding, a key individual such as the assistant principal, counselor, building coordinator, or lead teacher should assume planning leadership subject to the review of the principal before implementation.

Q. Who assumes leadership role in funding of career education at the high school level?

A. Depending upon the source of funding--federal, State, or local--the assigned career education coordinator at that level contacts the school superintendent, through whatever channels are required, and furnishes the superintendent with a proposal of sufficient depth to allow the superintendent to assume leadership in determining the funds that will be used.

Q. How does one go about obtaining space for career information centers?

A. a) Establish a need through meetings with:
   1) Administrative personnel,
   2) Building principal,
   3) Counselors,
   4) Librarians,
   5) Teachers.

   b) Suggested sites:
   1) Library,
   2) Guidance office,
   3) Separate room.

Q. What does career education hold for the individual student?

A. Career education holds for the individual student increased options through a program of academic and/or vocational training and skill development, in-school and out-of-school exploration and activities, increased self-awareness, and decision making abilities.

Q. What is the effect of open entry - open exit upon career education at the secondary level?

A. It requires a strictly individualized, competency-based curriculum. It is believed to work better in an area vocational school setting or in programs for out-of-school youth and/or adults in a community college setting as opposed to programs for in-school youth at the secondary level.

Placement at the Secondary Level

The following questions were raised in the preconference survey with respect to placement:

1. How is the total placement program coordinated when cooperative programs, work experience, and job entry are all involved?
2. What channels are used to notify interested persons (i.e., cooperative coordinators and/or students) of job openings?
3. What screening process is used to match student and job?
4. What system is used to prevent multiple contacts with potential employers?
5. What type of relationship does a secondary career education program have with employment agencies?
   a. For part-time work experience.
   b. For placement into full-time work.
6. What methods are being used to follow up on-the-job placement of students?

Work Group Response

Students not enrolled in a vocational education curriculum with cooperative work experience may also wish to work, and some provision should be made to accommodate them. Career education programs and guidance counselors are developing job interests and expanding the need for more detailed placement procedures. This increased responsibility for job placement requires either additional personnel or a reorganization of present staffing. While recognizing that educational placement and all future career plans are integral parts of the career education function, the committee directed itself to questions which more specifically related to work placement activities, both paid and unpaid.

In an effort to coordinate the various sources of job opportunities for students within the community, it is suggested that a clearinghouse concept be developed. The functions of the clearinghouse should be to:

1. Coordinate all placement--credit, noncredit, paid, unpaid, and volunteer--for all students including but not limited to cooperative, work experience, work study, and initial job entry.
2. Notify all interested parties of job openings (students, coordinators) by use of daily bulletin, public address system, bulletin boards, etc.
3. Screen to match students with jobs, by holding exit interviews with

all seniors to determine their interests, likes, dislikes, career plans. Students might go through the process of applying to the employment security office if for nothing more than the experience of being interviewed.

4. Prevent multiple contacts with potential employers. Establish a public relations program that educates the employers to submit needs to the clearinghouse. All staff members involved in placement activities (co-op coordinators, distributive education teacher-coordinators) would still work with employers but on a planned basis so that two, three, or more would not "drop-in" on an employer at the same time.
5. Cooperate with employment agencies, public and private, for part-time as well as full-time referrals. Benefit from computer linkups, job bank data, local, regional, and national employment information.
6. Follow-up should be provided:
   a. By work experience coordinators for job performance, strengths, weaknesses, credit, attendance.
   b. By placement staff to verify: openings, acceptance of referees, projected needs, and new or developing opportunities.
   c. For periodic evaluation of former students--changes in curricula, growth on the job.

We recognize that no two school systems are identical. These are offered as ideas to be adopted as is, modified, or fashioned to fit local needs.

Regardless of what is done you must obtain administrative support and should conduct inservice programs for all who will be involved.

Guidance and Career Education at the Secondary Level

The subgroup responsible for the guidance aspects at the secondary level elected to respond individually to each of the questions arising in the preconference survey. Their responses follow:

Q. How does one motivate the crucial personnel essential to the development of a comprehensive guidance and counseling program in career education?

A. There must be both verbal and financial support from the top administrative people in the school system, and there must be strong support of the building principal for career education.

Q. Should student organizations be used in the secondary career education program?

A. Students should have some input into career education activities, but consideration should be given to involving all ranges of organizations and not just organizations which are composed primarily of the college bound students (Student Council, and National Honor Society). A Career Education Planning Committee could be organized for the purpose of providing student input and should be composed of a cross-section of the student body.

Q. How are counselors actively involved in career education?

A. Counselors should be involved in visiting in the community and acquiring resource people for use in the classroom. Counselors should be involved in helping develop the guidance part of the instructional program at the time teachers are developing curriculum. Counselors should set up a job-audit program designed for the academic student who needs some experience supervised by a counselor. Counselors at the high school level should be more involved and knowledgeable about what is happening with students in career education at all levels so that the secondary level is closely tied together with previous experiences of those students. That coordination should also extend into the post-secondary period. Counselors should tie the career education program to agencies outside the school. This would be to the benefit of drop-outs as well as graduates. Realistic follow-up studies should be done by counselors of how many students actually finish colleges and other post-secondary schools and with what type

of degrees. Counselors should be involved with follow-up of students not in colleges to find out the effect of career education activities. Counselors should tie together guidance services to include placement and guidance. Counselors should be used as curriculum development consultants working with teachers and helping integrate career education into the various disciplines. Counselors should be used as personnel who demonstrate useful practical career guidance techniques in the classroom so that teachers could then use the techniques themselves. Counselors should become more involved in learning group guidance techniques. Counselors need the assistance of paraprofessionals to help operate career guidance centers. Counselors should rotate in their supervision of the career guidance center in order to become familiar with the materials. Counselors should participate on advisory committees.

Q. Are students made aware of educational possibilities in their field of interest at the post-secondary level? graduates? in junior colleges or universities?

A. There should be provisions made for people to reevaluate career alternatives after high school. It is desirable to have career guidance services available at the post-secondary level which best fits the local community.

1. Mobile career guidance center,
2. Junior College,
3. High School,
4. Department of Employment,
5. Or a combination of the above.

(Post-secondary includes those students in structured training programs as well as those changing careers.)

Q. Should counselors be used as in-house coordinators for the career education program?

A. This function should be given to a person designated for the specific purpose--perhaps the curriculum coordinator. Counselors should, however, be part of that function, but not necessarily in charge of it.

Q. Do counselors implement units of study in the classes or are they a planning resource for teachers?

A. Counselors should be primarily resource agents, but should be able to demonstrate group techniques for teachers.

Q. What steps can districts take to promote more group counseling and less administrative trivia and scheduling duties for counselors?

A. Counselors can schedule group activities periodically to maximize the unavailability for administrative responsibilities. Counselors should be encouraged to perform a task analysis in order better to define or redefine their activities.

Q. What are the characteristics of a good guidance program in career education?

A. The guidance program must be supported verbally and financially by the administration of the school district, including the Board of Trustees. The guidance program must have components to serve all students at all levels. The guidance program must be a coordinated articulated system at all levels. The guidance program must be tied into curriculum development and curriculum implementation. Inservice training must be a part of the guidance program. The guidance program must have clear-cut, realistic objectives and goals. Career education is a part of the guidance program, not separate services. The guidance program should have a career resource center as a part of its information center. Guidance must be tied closely with placement. Guidance programs should serve as a bridge between the vocational programs and the other instructional programs in the school. Guidance should use the Advisory Committee to strengthen the career education and the guidance program. Guidance needs a good dissemination program or a public relations effort. Guidance programs should use media presentations, etc., in their public relations efforts. Guidance programs must have a good evaluation system, based on the identified goals and objectives of the program. Guidance programs should maintain a strong contact with parents. Guidance programs should establish a better system of maintaining records for useful data collection.

Q. What parts do APGA, AVA, and NEA play in career education?

A. Professional organizations should support career education in written policy. State departments of education or U.S.O.E. could sponsor joint conferences between national professional organizations to coordinate career education.

Q. What are the objectives of vocational counseling?

A. Provide information, appraisal of interests and aptitudes, a referral

system, placement, follow-up. There must be strong ties between vocational counseling and placement. Vocational counseling should not be isolated to a vocational counselor because vocational or career guidance is a responsibility of all guidance and should be treated broadly.

Q. How do you get guidance counselors to see that guidance should be a developmental program and that placement is included in their role?

A. Counselors should be involved in establishing their own roles.

GROUP F

PREPARING TEACHERS FOR CAREER EDUCATION

Chairperson: Lloyd Briggs
Oklahoma State University
Stillwater, Oklahoma

Resource Person: Earl Dodrill
U.S. Office of Education
Region III

WORK GROUP FACILITATOR REPORT

Lloyd Briggs

I am representing Group F who wrestled with the topic of preparing teachers for career education. Our group facilitator had to leave yesterday afternoon so, as chairman, I am reporting for the group. We began Tuesday with 25 members and by yesterday afternoon we had lost three and gained one so we ended up with 22 members. I felt this was a pretty low rate of loss. We had a very good group and a very vocal group. I think that everyone in the group had something to say and with considerable conviction. We divided into three small groups and tried to think about some of the things that we should be considering. We started off by trying to identify some of the problems and issues in preparing teachers for career education and we discussed some of the problems in the institutions as they develop preservice and inservice programs.

I am pleased that each of the groups accepted a problem and really worked on it. One group took the area of preservice education and worked on strategies for infusing the career education concept into our preservice programs. They came up with several ideas. Then they looked at the area of curriculum and talked about some of the things that had to be done with the curriculum to get career education into the teacher education program. They looked at the area of personnel and what needed to be done with people in the teacher education programs. Do we need to throw them all out and start all over or do we need to have some kind of inservice training programs for them? How do we go about this and what do we do? They looked at resources, both human and material. They looked at activities which might be necessary to get the career education concept into the preservice teacher education program.

The next group looked at the inservice area. They covered some of the same things here, but they went beyond and looked at the ways in which the institution could better serve local schools and teachers at the local level through inservice programs. I am not going to go over the details of what they came up with, but essentially they came up with a procedure for developing interesting programs to meet local needs.

Then we decided that there is another area that we need to look at--the relationships between teacher education institutions, State departments, and local schools. We felt that in many cases we do not have the kind of working relationship needed for training career education personnel. This group worked on strategies for mutual support between teacher education and (1) State departments, (2) local schools, and (3) other types of agencies. They came up with some ideas that could be used to bring these groups together so we can have mutual cooperation and support among the

three areas. They came up with some very helpful recommendations, as you will see from their work group report.

WORK GROUP REPORT

Lloyd Briggs

The group began with an attempt to identify problems and issues in career education and then moved to suggested strategies for infusing the career education concept into the total teacher education program. It should be pointed out that the problems and issues identified and the strategies listed were intended not to be all-inclusive but rather to be suggestive as to ideas which might be considered by an institution as it moves to implement career education.

PROBLEMS AND ISSUES

The problems and issues were grouped into three categories: (1) those of a general nature, (2) those which are generally within the institution, and (3) those which generally relate to situations and conditions outside the institution per se.

Problems of a General Nature

One of the major problems was thought to be the prevailing negative attitudes and the general skepticism among teacher educators about the career education concept. This problem must be erased if the concept is to be accepted by college and university personnel and implemented into teacher education programs. This problem may be due to a lack of knowledge and understanding of career education on the part of teacher educators and it could be the result of a misunderstanding about the concept. The group felt that there still is some lack of a common definition of career education. There seems to be considerable variation in the perceptions of those who are actively promoting the concept relative to what it is and can do for American education. Another concern was the apparent lack of a knowledge base for career education. Is there some common base or foundation for career education or is it strictly a philosophical concept which permeates all aspects of education? It was felt that this issue and the definition problem may have a bearing on the attitudinal problem discussed previously.

In discussing the problems associated with implementing career education into teacher education, it was felt by the group that there may be some disagreement or lack of definition as to the nature of preservice and inservice education. This, of course, may be more a problem of semantics than anything else. There seems to still be a lack of information relative to teacher competencies for career education. What, specifically, does the teacher need to know for career

education which is substantially different? Are the teaching skills different, or is the approach or format for instruction different, or is it the curriculum content, or some of each plus other factors? Until this is determined with some degree of certainty, there is the problem of content for teacher education programs. There were other general types of problems identified but these listed were foremost in the minds of the group.

Problems Generally Within the Institution

There was considerable concern relative to an apparent lack of direction even in those institutions which are trying to implement the career education concept. There is interdepartmental jealousy in some institutions over who will have greater responsibility for moving career education within the institutions. Counseling and guidance personnel think it is a guidance responsibility and that they should have authority for its implementation and coordination in the teacher education programs. Curriculum and instruction personnel feel that they should have authority for its implementation. And vocational education personnel think they should have major authority because most of the financial support to date has come from vocational education. On the other hand there are some institutions in which each department is somewhat apathetic and maintains that it wants no part of the idea and if anyone does it, the other departments will.

There was considerable concern expressed over the apparent lack of a theoretical framework for career education and the resultant problem of how it fits into a teacher education program. Rigidity of existing curricula and courses was seen as another major problem. Many departments are reluctant to change or modify their curriculum because it might create problems in terms of restructuring and changing faculty assignments. Faculty members are reluctant to change or modify their courses because this would mean changing their course outline and materials and they would need to broaden or redirect some of their thinking and activities. It was felt that this problem will not be solved easily. Until some of the above problems are overcome, most teacher education institutions have a totally inadequate delivery system for career education.

In addition to the problems listed above, there is a serious lack of commercial materials for career education in the teacher education programs. There is a considerable amount of materials for use in the public schools at most levels but not for professional teacher education courses. The career education concept, it was felt, must be written into the textbooks which are used in the teacher education program.

Problems Outside the Institutions

One of the major and more serious problems is the lack of definition of the university role in teacher education for career education. There was feeling expressed by some that the teacher educators have not shown an interest in promoting career education so the State departments must maintain major responsibility for working with the local teachers to provide inservice training. Others felt that the teacher educators had not been given the opportunity to get involved but could make a considerable contribution if allowed to do so. The feeling was that in most cases teacher educators would be more than willing to work with both local and State department personnel in any way possible to improve the whole of education. There were others who expressed the opinion that the local schools probably could do more than any other group to provide leadership in promoting and implementing career education because they are where the action is. The feeling was that State departments could serve best by facilitating cooperative efforts between local schools and among local schools and teacher education institutions. This would be a coordinating role. Teacher education institutions should be encouraged to infuse career education into the preservice programs so that new teachers emerge from the programs with a thorough understanding of the concept and how to develop a career education orientation to their classroom instruction. State departments, through special funding arrangements, should attempt to facilitate cooperative efforts between teacher education and local schools for their inservice training. The end result would be a three-way partnership among local schools, State departments of education, and teacher education institutions in which each agency would have a significant responsibility for a mutually supportive effort rather than the three groups criticizing each other to the detriment of the children and youth to be served.

Other problems identified which are in the category of being outside the institution proper were the apparent lack of strategies for involving noneducational groups, organizations, and agencies. If career education is to prepare people for the "real world" why isn't the "real world" brought into the act? There are unlimited resources available in most local communities which are virtually untapped. There seem to be little if any efforts to acquire noneducational allies to help support and move ahead the career education effort. Few State and Federal legislators know what it is all about and what implications it has for education in their State. Little effort has been made to establish effective communication links to inform the general public. Educators have been talking to educators with almost no effort to inform parents and other community personnel.

Though it was agreed that many of the problems and issues relative to infusing career education into teacher education were only now beginning to surface, it was felt that those identified here were sufficient to work on for this conference.

STRATEGIES FOR IMPLEMENTING CAREER EDUCATION INTO TEACHER EDUCATION

As the group began to consider strategies for implementing career education into teacher education, it was agreed that there were three major areas of concern: (1) preservice teacher education, (2) inservice teacher education, and (3) strategies for mutual support between teacher education and (a) State departments of education, (b) local schools, and (c) other agencies and groups within the community and State. In the case of both preservice and inservice education, the strategies were grouped under four main categories: (1) curriculum, (2) personnel, (3) resources, and (4) activities.

Preservice

Though there is considerable overlap between preservice and inservice categories which follow, it was felt that each should be treated separately to prevent restricting the thinking of the group.

Curriculum: It was generally felt by the group that an institution implementing career education into its preservice programs should consider developing one or more courses specifically on career education for awareness and general understanding plus integrating the concept into all of the professional teacher education courses. Career education could be only one course of a general nature with the hope that specifics would be attained in the other professional courses. The other possibility would be a basic course of a general nature on career education to be followed by a second course for elementary majors and another second course for secondary majors. It should be noted, however, that the career education course(s) would not eliminate the necessity to infuse the concept into the professional courses as well. In addition, it probably would help if the teacher education program is developed with a competency-based approach.

Personnel: One of the obvious needs from the standpoint of personnel is to arrange for inservice education on career education for teacher educators. It also would be helpful to develop strategies for personnel exchanges between teacher education and State departments and between teacher education and local schools. This probably could be

accomplished more easily than some people imagine. It might be helpful also to arrange for mini-internships in business and industry for appropriate teacher educators.

Resources: Most communities have a wealth of resources which would be readily available. In addition to orienting teacher educators and helping them learn more about careers, business and industrial personnel as well as local educators and State department personnel generally are available to assist with classes for teacher education majors. Also, personnel from other professions and groups generally are agreeable to visiting a class to talk with students or to having the class visit them--or both. Retired persons are a tremendous resource and usually anxious to assist in such an effort.

It sometimes is necessary to secure additional funds to support the initial move into implementing career education. Frequently small sums for a worthwhile activity of this nature are available from State departments of education as well as from certain federal programs. Another source to investigate for possible financial assistance is private agencies and foundations. It is not uncommon for private companies within the community or State to agree to provide small amounts of funding if approached in the right manner.

Activities: Implementation of career education on a total teacher education basis requires the initiation of several special activities. It requires considerable departmental and institutional planning of both a short-term and long-range nature. It requires cooperative efforts between and among departments so that programs of each compliment those of the others. It requires a greater degree of interaction among teacher education faculty than has generally been done in the traditional programs. It will be necessary to involve local schools and State departments in different ways so that each agency is making input and providing leadership for areas in which they have expertise. University and college faculty in the disciplines outside of education must be involved in new and different ways. Effective implementation of the career education concept in the teacher education programs will require a total effort of all faculty and all resources available.

Inservice

For the purposes of this report on the discussions of the teacher education group, inservice education refers to instructional or training programs for educational personnel who are currently employed in an ongoing school situation. The philosophy and justification for inser-

vice education on career education are very well expressed by Dr. LeVene Olson of this group who made the following statement.

"Planning for the inservice of educators who are currently in service of the local education agency is based upon how the planner views those who are to be provided with inservice. If teachers, counselors, principals, and supervisors are viewed as incompetent, inservice efforts will be remedial in nature. When the above premise is used as the basis for inservice, the approach used is usually quite impersonal with very little involvement and commitment on the part of those receiving the inservice. On the other hand when educators are viewed as professionally competent individuals who can be assisted in their continuous intellectual growth, inservice will be oriented differently." The approach to inservice which is suggested in this publication is based on the following assumptions:

1. Educators are self-directing.
2. Educators are professionally competent.
3. Educators are intellectually curious.
4. Educators are interested in professional growth.

These assumptions dictate that inservice be planned and conducted in a climate which will support professional growth by providing educators with an opportunity for personal involvement, ego support, social mobility, introspective articulation, feedback, and professional dialogue. A method of providing the kinds of experiences which are based on the above assumptions requires that a dual focus be employed. The inservice should possess both process (human relations) and task (planning, development, implementation) functions.

Many worthwhile innovative programs fail because of inadequate attention to the human relations or process phase of the venture. Although technical and informational components are often highly functional and relevant, process problems may intervene to minimize the potential effectiveness of the effort. In order to avoid this barrier to program implementation, inservice with a dual emphasis designed to focus on both the process and task elements of program implementation and change is suggested. (Volumes I through IV of the Handbook of Structured Experiences for Human Relations Training is one of the best sources available for practical approaches to human relations.) When time permits, the first inservice session should open with the process focus and then move into the task component. The specific areas on which the first session should focus are staff and group development, team building, and the creation of a consultative helping relation-

ship between staff and teachers, counselors, and principals. Experiential situations may be created which allow participants to learn first-hand about effective communications, consulting problem solving, planning, feedback, group decisionmaking, and team work.

Data gained from verbal contact with educators indicate that the two-pronged (process and task) approach of the inservice results in the development of a cohesive, committed team of teachers, principals, and central staff personnel unified around the career education concept with skills in the technical or informational aspect, as well as competence in such process areas as communications, cooperation, and problem solving. This combination can be the key to a successful project which facilitates central staff and building staff integration and accelerates the development and maintenance of teamwork and consensual behavior.

The focus of much of the inservice is on the development and implementation of career education units which are supplementary to the existing curriculums. The units are an approach to systematically developing and inserting career education learning experiences into existing school subjects.

Educators must recognize that curriculums and curriculum units provide the climate in which teachers are able to function. The career education units may suggest learning experiences, which appear to be meaningful for students; yet the units in and of themselves will not guarantee relevant learning experiences for children and youth.

The teacher's role is of central importance in the education of children and youth. The teacher possesses the ability to take mundane learning experiences and transform them into meaningful learning experiences by being sensitive and responsive to the needs and concerns of children and youth.

One of the basic assumptions mentioned earlier is that educators are professionally competent individuals. Yet, because educators are sensitive to the needs and concerns of children and youth, they seek ways to grow professionally. Hopefully, effective inservice and the development of career education units will help create a climate in which educators can become more responsive to the needs and concerns of children and youth.

Educators possess a vast store of knowledge of course content and considerable expertise in teaching methodology. Because of this expertise and the evolving nature of career education, the climate for

inservice should be contemplative rather than authoritative. The structure of the experiences affords educators the opportunity to answer the questions: What? So What? and Now What? Briefly, these questions relate to:

1. WHAT is career education?
   - 1.1 How does it relate to my students?
   - 1.2 How does it relate to subject?
   - 1.3 How is it taught?
   - 1.4 How does it relate to the community?
   - 1.5 How will I find time to teach it?
   - 1.6 How does it relate to the changing career world?

2. SO WHAT difference will it make for the student?
   - 2.1 Does it make school more meaningful?
   - 2.2 Does it increase academic achievement?
   - 2.3 Does it increase the maturity of students?
   - 2.4 Does it decrease cultural shock?
   - 2.5 Does it promote self-understanding?
   - 2.6 Does it help students make decisions?

3. NOW WHAT can I do to implement career education?
   - 3.1 Will I receive assistance from supervisors?
   - 3.2 Will additional materials be made available?
   - 3.3 Will community personnel be involved?
   - 3.4 Will I be required to cover certain topics?
   - 3.5 Will I be able to alter curriculum materials?

The process in which educators are involved during the inservice requires that adequate information about career education and ample opportunity be provided to clarify the information through discussion and questions. Educators must interpret the information as it relates to the realities of the school and place a value judgment if they are asked to make a commitment to the development, implementation, and evaluation of career education.

Suggested Justification for Career Education:

Growing up has not been an easy process at any time in history. Growing up in today's exceedingly complex society has become a very difficult process. Children and youth are bombarded with information because of sophisticated communications technology. As a result, children and youth are rich with information. Children and youth have an abundance of books, pamphlets, etc. at their disposal. Paradoxically,

though, they are experience poor. Children and youth are often not involved in adult kinds of activities which help them understand themselves, education, or the world of work.

Because children and youth are educated within the confines of the four walls of the classroom in a traditional manner, many students do not know who they are, where they are going, or how to get there. Many students have not been provided with experiences which allow them to make and implement accurate choices about the present and future.

The public school plays a vital role in the development of the student. The student develops physically, mentally, and emotionally. These developments are related to the student's future role in society. If proper experience related to self-understanding, educational endeavors, and career potential is not provided to the student, career development does not keep pace with physical development. Students do develop attitudes toward self, education, and careers. Yet, many students are not provided with the experiences for proper development. As a result, few students understand themselves, or the relationship between education and work.

The costs to society of providing an education which is suited to neither the student needs nor societal needs are tremendously high. Society is drained of resources for every individual who cannot successfully cope with self, education, and/or employment. The unemployment lines, welfare roles, drug centers, and mental institutions are filled with individuals who have not been provided with the experiences which are necessary to successfully meet and overcome challenges and allow the individuals to become contributing members of society.

School systems utilize taxpayers money to educate children and youth. It is expected that youth leaving school will possess the necessary competencies (attitudes, skills, and knowledge) to effectively function in a work-oriented society. In the past, very few career or work-oriented courses were offered--and then to only a small percentage. of the students.

The paradox exists. On the one hand, too few courses have been career-oriented--and then only at the upper high school levels. While on the other hand, all students eventually enter the career world through paid or unpaid work. For most students, the effort has been too little, too late.

An innovative educational approach which possess the potential to

revitalize the formal educational system has developed recently. The high degree of receptivity by educators to the approach called career education is due to many forces in society. Parents, the business and industrial community, educators, and students are becoming increasingly concerned about the lack of relevance of education for children, and youth, and adults. These concerns stem from numerous experiences related to:

1. The absence of relevant experiences which provide for self-understanding and self-acceptance. Many children, youth, and adults in today's society lack a clear identity of themselves and fail to understand how or where they fit into the social, career, and educational structure.
2. The increased mobility of youth and adults has enhanced employability but has resulted in cultural and career shock for many. Students are not aware of the expectations of various social settings and of various careers. Through mobility, youth and adults are hurled into a society which contains many unknowns for them.
3. The increase in technology has affected the employability of youth and adults. On the one hand, a large number of youth are available for work, yet they do not possess the competencies to qualify for the technical occupations which often go unfilled.
4. The educational system has been oriented toward college entrance requirements. The system may meet the needs of the students who will enroll in college but, for the majority of students, the present system does not provide the competencies needed.
5. Dissatisfaction with work roles is prevalent. This has often resulted from a lack of experiences related to abilities, aptitudes, needs, likes, etc. and a lack of knowledge about the options available in the labor market. In some cases, the dissatisfaction by workers has resulted in sabotage.
6. A large number of youth who drop out of school lack entry level employment skills. Many of these students indicate that they will under no circumstances, reenter the educational system. Unemployment rates for those who leave the educational system early are usually quite high.
7. Dissatisfaction with the career opportunities available to women exists. Schools have systematically encouraged female students to enroll in certain courses only. This process has tended to channel female students into a limited number of careers.
8. Information and experience which provides a broad understanding

of the range of career options available to the students is not available to many students. The result, in many cases, has been that youth has had to explore careers through numerous jobs following high school graduation. For many this exploration comes at a time when the young adult is taking on new responsibilities. The end result, for many, is underemployment.

9. A reduction in family size and place of residence has resulted in fewer significant relationships for children, youth, and adults. In the past, awareness of self, education, and careers was a by-product of interaction among members of the family. Presently, teachers are becoming more significant to students.
10. Many children, youth, and adults lack an understanding of the relationship between education and work. Educators often assume that children and youth inherently understand the value of school subjects and their relationship to the world outside the classroom. The result has often been a lack of interest in school and a failure to recognize the value of education.

Due in large part to the above concerns, legislation was passed in the 1960's which provided legitimacy to a process of education which addresses itself to these concerns. Research and development is being encouraged so that more relevant methods can be found to educate the children, youth and adults.

The group suggests the following chronological outline of steps for developing a comprehensive inservice program on career education for local teachers. The faculty in preparing for the inservice program shall:

1. Develop a descriptive inventory of the school, its students, and its faculty. This would include such factors as the ethnic character of students, faculty, and community and the extent to which they are compatible. It would include a determination of their knowledge level of career education. Information relative to the urban or rural nature of the community as well as other such information would be necessary for planning the program.
2. Recognize the needs and wants of the people in the particular environment, then analyze and organize them (needs and wants will vary as to the social-economic status, the dogmas, the traditions, etc.).
3. Prepare treatments to meet the existing situation (environment). Think in "soft-sell" terms! Always be aware of the human relations aspect.

a. Be sincere and recognize the knowledge and competencies of the teachers.
b. Use indirect approach (interest civic groups, parents, school boards, power people).
c. Involve one or a few teachers before presentations to total group.
d. Use media of interest, which is appropriate to situation.

4. Introduce career education (establish time and place conducive to teacher alertness and desire).

   a. Keep "low key" and a positive attitude and a positive approach (show how they have been practicing career education already).
   b. Use the knowledge and abilities of the inservice personnel to present the program.
   c. Present a system which will help to ensure vertical and horizontal communications between the project administration and all faculty members. (It will also serve as a method for dissemination of career education inservice without turning out en masse.) The idea is to seek their involvement.

5. Integrate career education into courses.

   a. Illustrate (demonstrate, instruct) how to integrate career education into a few courses by the use of a curriculum matrix system. For example, a series of nine main goals could be used: self-awareness, career awareness, life style awareness, work values and habits, decisionmaking, academic/vocational skill competency, work seeking and getting skills, placement, continuing education. Each would be stated as an objective. Also on each matrix would be the student's unit objective, treatments, available resources, and evaluation procedures.
   b. Teachers would build a series of student units for each main objective for the subject or grade taught, develop resources and treatment for each unit, and an evaluation procedure.
   c. Area groups would compare and improve.
   d. In the upper grades crossdiscipline grouping could be attempted to broaden exploration.
   e. If desired, developmental ladders could be built.

6. Interest faculty in finding and using resources.

   a. Personnel from all occupations, both white and blue collar.
   b. Audio-visual materials.
   c. Printed materials.
   d. Financial aid from all sources.

7. Present methodologies for the teacher to use which match student age and environment.

   a. Simulation.
   b. Infusion.
   c. Role playing.
   d. Work experience.
   e. Field trips.
   f. Interviewing.
   g. Research.
   h. Discussions.

NOTE: Ensure that all positive results, instruments, methods, etc. are submitted to a data gathering center for dissemination.

Strategies for Mutual Support Between Teacher Education and other Agencies

The following material obviously is incomplete but is intended to present some ideas for developing a cooperative effort among the various agencies:

1. Determine strengths and capabilities of the various agencies, identify activities appropriate to each, and establish procedures which enable each to complement the strengths and efforts of the others.
2. Review the organizational structures of the agencies to determine appropriate lines of communication.
3. Identify agency leadership personnel and decisionmakers in order to initiate planning for mutual support and to establish a commitment for such support.
4. Design and implement a plan to meet the need.

As indicated in the beginning of this report, the intent of the discussion group was to brainstorm and raise some issues and ideas rather than to solve all the problems and offer a concrete plan for career education in the teacher education program. We hope that some of these ideas will at least provide food for thought.

Questions and Answers

Q. By what process do career education concepts and objectives become a part of the teacher training programs? By what processes do institutions change and upgrade the content of their programs?

A. 1) By orientation and motivation of teacher educator faculty and by encouragement from SEA and LEA personnel.
2) By selling faculty on the new ideas.

Q. What is being done at the State and national levels to assure the articulation of the career education philosophy in teacher training programs?

A. Almost nothing.

Q. Can massive teacher education be accomplished without the involvement of higher education?

A. It can be but would not be wise. Higher education has to be involved so it can move career education into preservice programs.

Q. Would an emphasis on career development for students in higher education have an influence on the need for career development in the public schools?

A. Probably, but because of the value for higher education, students would be recognized and this would be moved down into public schools.

Q. Would the involvement of higher education reduce the concept of "education for education's sake?"

A. Perhaps.

Q. Can career education realistically gain very much success before all educators are well informed?

A. Probably so, but the ultimate would be for all educators to be informed and involved.

Q. What can teacher education be expected to do in preparing teachers and counselors for career education?

A. Develop an understanding of the concept and include career education in professional education courses so that teacher education majors

internalize it and develop teacher competency in all segments of education.

Q. Can we realistically expect practical experience to count for certification purposes?

A. If it is organized experiences directed toward planned objectives of the teacher preparation program.

Q. How can better public relations be established between higher education institutions and the career education projects? 1) How do you get them into the field to see what career education is? 2) How do you get the staff together, with time for planning?

A. By bringing teacher educators into the projects and making teacher educators a part of them. This is a perfect way to sell teacher educators on the concept. 1) Invite them--give them a reason. 2) Sell deans and department heads, so they will provide time.

Q. Do teacher educators, in general, endorse the career education concept? What steps are recommended in this regard? By whom?

A. No--see response to question "A". Probably should be instigated or opportunities made possible by State departments.

Q. Would a strategy of moving on college faculties and local schools who have already established a history of working together be a more viable approach?

A. Obviously.

Q. How can trainers of teachers/counselors who, themselves, have traditionally been required to develop expertise in narrowly defined disciplines, be convinced and trained to use the career education model as the vehicle to apply and pass along their expertise? How will they best grasp the potential benefits of a K-Adult career education approach for instruction and guidance?

A. 1) We need massive inservice training for teacher educators. 2) Through continued inservice education.

Q. What are the legal implications of career education; e.g., Carnegie Units (New York State), teacher certification, etc.?

A. Most institutions can accommodate the concept through various procedures; i.e. competency exams, etc.

Q. Are there implications for physical-structural changes related to educational facilities and organizational structure that should be fed into teacher preparation programs?

A. Few if any.

Q. How can we insure that teachers/counselors are ultimately trained to use a career education approach to instruction and guidance, including the use of available career education resources and materials? (Address at all levels--post-secondary, adult, vocational/technical, as well as elementary and secondary.)

A. By the consumers of the teacher education product requiring specific types of competencies. This applies to all levels.

PUBLICATION DATE: 02JUL76

TITLE: IMPROVEMENT IN THE QUALITY OF WORKLIFE AND PRODUCTIVITY: A JOINT VENTURE BETWEEN MANAGEMENT AND EMPLOYEES. FINAL REPORT.

PERSONAL AUTHOR: GLASER, EDWARD M.; AND OTHERS

DESCRIPTOR: JOB SATISFACTION; *ORGANIZATIONAL EFFECTIVENESS; *PERSONNEL MANAGEMENT; *CONSULTATION PROGRAMS; *RESEARCH; PRODUCTIVITY; *WORK ATTITUDES; WORK ENVIRONMENT; HUMAN ENGINEERING; PARTICIPANT INVOLVEMENT; INDUSTRIAL PERSONNEL; MANAGEMENT EDUCATION; EMPLOYER EMPLOYEE RELATIONSHIP; INTERVENTION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 166P.; PAGE 118 CONTAINING FIGURE 10 "RESPONSES TO JANUARY 1975 ISR MONTHLY SHORT FORM FEEDBACK" WAS NOT REPRODUCIBLE AND WAS REMOVED. IT IS NOT INCLUDED IN THE PAGINATION.

ABSTRACT: THIS REPORT DESCRIBES AND INTERPRETS A RESEARCH PROJECT AT A NEW BRANCH PHARMACEUTICAL MANUFACTURING PLANT WHICH WAS DESIGNED TO ASSESS THE RELATIONSHIP BETWEEN QUALITY OF WORKLIFE (QWL), PRODUCTIVITY, AND JOB SATISFACTION. THE PRINCIPAL OBJECTIVE WAS TO DETERMINE WHETHER A QWL CONSULTATION TO A NEW PLANT DURING ITS INITIAL OPERATION WOULD IMPROVE JOB SATISFACTION AND PRODUCTIVITY AS COMPARED TO AN ESTABLISHED PARENT PLANT. INTERVENTION METHODS INCLUDED CONSULTATION WITH MANAGEMENT, INVOLVEMENT OF SMALL TEAMS OF WORKERS IN THE PROBLEMS OF THE PLANT, PSYCHOLOGICAL ASSESSMENT, TRAINING AND ORIENTATION, AND CONTRIBUTING TO CONFLICT RESOLUTION AND COMMUNICATIONS FACILITATION. IN SPITE OF PROBLEMS ARISING FROM START-UP DIFFICULTIES AND A CHANGE IN CORPORATE OWNERSHIP, THE OUTCOMES WERE POSITIVE. AMONG THE TOTAL WORK FORCE THERE WAS EVIDENCE OF A MORE WIDELY SHARED EGO-INVOLVEMENT WITH THE PLANT AND ITS PROBLEMS, THE RATE OF ABSENTEEISM WAS CONSIDERABLY LOWER, AND MAJOR INITIAL PROBLEMS WERE SUCCESSFULLY OVERCOME TO ENABLE SATISFACTORY FULFILLMENT OF PRODUCTION GOALS. THE REPORT DESCRIBES DEVELOPMENTAL EVENTS, PREVAILING CONDITIONS, CONSULTING INTERVENTIONS, AND OUTCOMES. AN ANALYSIS IS PRESENTED OF WHAT DID AND DID NOT WORK. LEARNINGS AND RECOMMENDATIONS ARE DRAWN FROM THE EXPERIENCE IN ORDER TO PROVIDE INDICATIONS FOR FUTURE EFFORTS TO ACHIEVE IMPROVED QWL AND ORGANIZATIONAL EFFECTIVENESS. (NJ)

15. Supplementary Notes

16. Abstracts

The report describes and interprets a research project conducted by the Human Interaction Research Institute at a new branch pharmaceutical manufacturing plant. The study, supported by a grant from the Department of Labor, was designed to assess the relationship between Quality of Worklife (QWL), productivity, and job satisfaction. The report describes developmental events, prevailing conditions, consulting interventions, and outcomes. An analysis is presented of what seems to have worked and what has not. At the time of the project, the corporate organization was beset by financial problems and those related to adjustment to new ownership; the branch plant was overwhelmed by start-up technical difficulties. Nevertheless, positive outcomes can be reported in terms of satisfactorily meeting production goals, ego-involvement of the workforce, comparatively low absenteeism rate, and the plant's survival of the eroding frustrations of start-up delays. Learnings and recommendations have been drawn from the experience in order to provide indications for future efforts to achieve enriched QWL and organizational effectiveness.

ACKNOWLEDGEMENT

We deeply appreciate the opportunity given to us by the Crown management to work with their new plant at Centerton, and to study the development process there. The managers, supervisors, and nonsupervisory personnel at Centerton have been very generous. Without their help and willingness to communicate openly with us, this study would not have been possible. We are thankful for their contribution to the understanding of the problems, pitfalls, and opportunities in trying to structure the work arrangements and managerial style of a new plant along the lines that presumably should enhance the quality of worklife.

Dr. Robert J. Foster, Office of Research and Development, Employment and Training Administration, has been our Department of Labor project officer. In that role he has provided wise counsel, helpful support, and constructive critique.

Several HIRI colleagues, particularly Molly Lewin and Diana Marr, have read draft editions of this report and have offered valuable editorial suggestions. Patty Lee, project secretary, has done a painstaking, patient and skillful job in the production of the manuscript.

LIST OF ABBREVIATIONS

It might be well at the outset to identify all abbreviations that will be used in this report.

BoB, FDA = Bureau of Biologics, Food and Drug Administration

C/C = Centerton plant of Crown Medical Specialties Company, where this experiment was conducted, located in the southeastern part of the U.S.

CMS = Crown Medical Specialties Company (a pseudonym used because the participant company prefers such anonymity in this report)

DOL = U.S. Department of Labor

E/M = Engineering and Maintenance

HIRI = Human Interaction Research Institute

ISR = Institute for Social Research, University of Michigan

QA = Quality Assurance

QWL = Quality of Worklife

PD = HIRI project director, Edward M. Glaser, PhD

PI = HIRI principal investigator, Carroll E. Izard, PhD

P-O = participant-observer, Mary Faeth Chenery, M.M.

PM = Participative Management

ABSTRACT

The report describes and interprets a research project conducted by the Human Interaction Research Institute at a new branch pharmaceutical manufacturing plant, located in a rural southeastern U.S. location. The study was designed to assess the relationship between Quality of Worklife (QWL), productivity and job satisfaction. It was supported by a grant from the Department of Labor (DOL). The project's goals were: (a) to determine if QWL consultation to a new plant would contribute to improved job satisfaction and productivity compared with an established plant of the parent company manufacturing the same products, but not participating in such consultation; (b) to describe developmental events, prevailing conditions, consulting interventions and their outcomes; and (c) to distill learnings from what seems to have worked well or what has not, in order to provide indications for future efforts to achieve enriched QWL and organizational effectiveness.

Thorough implementation of the project concepts was limited by a number of factors discussed in the report; e.g., pressures resulting from start-up of a new plant and associated technical problems; a change in corporate ownership resulting in changes in corporate priorities, especially in response to the economic recession and a period of corporate financial difficulty experienced during 1974-75.

Positive outcomes can be reported, however: the initial production runs were successful; there is evidence of widely shared ego-involvement among the total workforce with the plant and its problems; the absenteesim rate has been only 2.3% compared with a regional average of 4.5%; the plant has successfully weathered major problems, frustrations and pressures involved with start-up delays and simultaneous needs to "hurry into production." Although a diminution of overall enthusiasm and commitment to participative management has been noted, there is evidence that management feels the project has reinforced their efforts to create a good working environment. Learnings and recommendations have been drawn from the experiences, with a full chapter devoted to these findings.

A forthcoming companion report by the Institute of Social Research, University of Michigan (ISR), due approximately in December 1976 or early 1977, will present results of an independent evaluation of this project and its outcomes.

EXECUTIVE SUMMARY

Improvement in the Quality of Worklife and Productivity: A Joint Venture Between Management and Employees

This is a report about an action research project conducted at a new pharmaceutical manufacturing plant of Crown Medical Specialties Company (CMS), located in Centerton, Southeastern U.S., by the Human Interaction Research Institute (HIRI), funded by the U.S. Department of Labor (DOL).

Objectives

The principal objectives of this three-year study have been:

1. To determine whether a quality of worklife (QWL) consultation to a new plant during its planning, staffing, organizing, and initial operation would contribute to improved job satisfaction and improved productivity as compared with a long-established, more traditionally managed plant in the same company making the same products, but not receiving QWL consultation. HIRI's responsibility was to provide the QWL consultation.

2. To describe and document the noteworthy events in the development of this new plant, the nature of the consulting interventions, the prevailing conditions seemingly relevant to the consulting efforts, and the outcomes of those efforts.

3. To distill learnings from what has worked well, what has not, and what might work better in future efforts to achieve both enriched quality of worklife and improved business effectiveness/efficiency. This largely clinical evaluation is to be supplemented by an independent, more quantitative analysis conducted by the Institute for Social Research (ISR), University of Michigan.

A fourth objective, not originally anticipated, has been added, namely, to analyze why one major segment of the Centerton plant (Quality Assurance) seemed better able to sustain the QWL effort than the other major segment (Production).

Method

The primary consultation tasks involved were:

1. Working out agreement with corporate top management on the West Coast and with local top management at the Centerton plant regarding the purposes and conditions of this experiment.

2. Consulting with the general manager, production manager and personnel manager regarding arrangements that would permit small teams of workers to handle significant segments of the manufacturing process, encourage employees to participate in planning the organization of their work, and permit cooperative problem solving by employees and their managers/supervisors.

3. Providing psychological assessment and screening inputs for consideration by the plant manager and personnel manager in the early selection of department managers and section supervisors, then subsequent assistance in selection of operators when they were hired in March 1975.

4. Serving as trainers to help the personnel manager present QWL and management training programs for the key personnel shortly after they were hired, and participating in subsequent orientation efforts with operators and new supervisory employees.

5. Being available as resource persons to help with various types of individual, group, and organizational problems; e.g., contributing to conflict resolution, communications facilitation, procedures for setting up goal attainment feedback mechanisms, and individual or group management development needs.

6. Maintaining a full-time participant-observer (P-O) at Centerton to observe the plant operations on a daily basis, with attention to the impact of stressful start-up conditions on QWL concerns. The P-O also served as a participant in problem identification, problem solving and feedback regarding the developing managerial styles and team functioning. Backup was provided through periodic visits to the plant by the project director (PD) and principal investigator (PI).

7. Documenting what each member of the HIRI project team observed, learned from others, and interpreted with regard to the development of events at Centerton, along with documentation of consulting intervention efforts and their impact.

Major Organization Developments to Date

Positive Developments:

1. The initial production runs were successful, which is an unusual achievement. The plant was licensed in November 1974 by the Bureau of Biologics (BoB) of the Food and Drug Administration (FDA), to ship its first product, with three other product licenses granted by July of 1975.

2. The plant performance has exceeded company expectations for quantity of production and yield of finished product from the raw material. Countless technical problems were overcome. Efforts to cope with these problems involved not only personnel at the plant, but experienced experts from the headquarters as well. Thus, achievements attained at the plant were affected not only from general management results, but also from highly complex technical resolutions to problems--resolutions that had to meet FDA and BoB requirements as well as the company's own high standards.

3. Based upon ISR surveys,* HIRI interviews and many non-solicited attestations, there is evidence of broadly-felt ego-involvement among the total workforce with the company, the plant and its problems. Workers are committed to the goal of high quality products. Personnel appreciate the unusual opportunity to have a "say" about their work. They feel that management usually is responsive to their ideas, and there is widespread concern about plant goals and problems. (The rate of absenteeism is sometimes used as an indication of alienation or involvement. In the Centerton plant the absenteeism rate has been 2.3%, which seems low in contrast to the regional average of 4.5%. The next lowest CMS plant rate is 9.3%.**)

4. The plant has weathered great frustrations, pressures and irritations in the start-up and "debugging" phase from May 1974 to about May 1975. After that time, the Centerton organization began to settle down and mature in a generally healthy, productive way.

5. Some of the focal points of the QWL improvement effort, such as the development of a responsive managerial climate that would pay heed to needs, suggestions or criticisms from any member of the workforce, have been internalized as the general style of work at Centerton, even though no longer a QWL thrust per se.

Dubious or Negative Developments

1. The early enthusiasm for creating an innovative QWL program has been blunted. While the management climate o

* Source: ISR Short-Form Feedback Report--a monthly survey.

**Source: Centerton Personnel Department. The plant, in keeping with the practice for that region and of the state, excludes from these absentee rates excused absences, paid vacations and holidays. Because of the number and diversity of CMS corporate locations, corporate figures include these absences as well. Thus, direct comparison with the regional average is valid, but comparison with the other plants in the company is contaminated by differences in the definition and thus the calculation of absenteeism.

the plant still is more responsive to employees' needs, suggestions and criticisms than in a traditionally managed manufacturing plant (according to Centerton workers' own reported experiences with other companies and the consultants' experience with Crown's headquarters plant as well as with numerous other companies), the many intervening factors and difficulties have led to a diminution of concern for QWL improvement considerations.

2. While some managers and supervisors have maintained a style that sincerely invites participation by the task teams in the design, structure and organization of their work, others have reverted to a more traditional authoritarian approach that is short on upward communication and defensive with regard to suggestion or criticism. The Centerton plant manager's initial support of participative management has shifted toward a philosophy of "manage in whatever way is comfortable for you so long as you get good results." Thus, those whose customary management style tends to be authoritarian are no longer unequivocally encouraged to learn new ways of stimulating ego-involvement on the part of the workforce by respectfully and appreciatively inviting their participation.

Some Conditions Affecting the Experiment

1. In February 1974, nearly 12 months after the experiment was initiated, CMS was sold to a foreign multinational company. The new owners installed a president and chief executive officer, and a vice president in charge of manufacturing at corporate headquarters. The former president was retained as board chairman. The new management was concerned primarily with solving the company's severe financial problems and was only marginally aware of the project in Centerton. In the Fall of 1974, the HIRI P-O learned that at least some influential members of the local management at Centerton had inferred (correctly or incorrectly) that the new corporate top management did not regard the QWL effort with favor, and this perception understandably affected commitment to that effort at Centerton.

2. The new plant had only a few people who were experienced and technically competent in the plant's primary production functions (extraction and processing of biological products). Thus managers and supervisors were occupied with learning to perform the complex technical activities of their jobs and had little time to develop new management styles or commit themselves to the QWL program.

3. Because of severe financial problems at the time the new management took over the company, there was great pressure for cost cutting and for getting the plant into

production as quickly as possible. Start-up was delayed for four months because of numerous problems. Frequent 12- to 16-hour workdays drained managers' and supervisors' energies.

4. The HIRI project was on a very tight budget, which sharply limited the amount of time the PD and PI could spend at the plant.

5. Prior to the beginning of the Centerton project the HIRI PI had accepted a scientific exchange fellowship in the U.S.S.R., scheduled to begin July 1, 1974. The date appeared compatible with the original plans for plant start-up in January 1974, allowing about six months of consultation during the start-up and the early phases of production. However, technical problems delayed start-up until June 1974, and it was not feasible to change the PI's fellowship arrangements made by agreement between the National Academy of Science and the Soviet Academy of Science. Although the PD tried to substitute for him during this period, he had not had time to establish close relationships with Centerton staff, and the budget would not support frequent travel between the PD's Los Angeles office and the Centerton plant.

Synopsis of What Has Been Learned

Regarding Effects of a QWL Program:

1. Participation by employees in certain types of policy making, such as "rules of conduct" for operation of the plant, seems to enhance compliance with these policies, and to foster a positive attitude toward the company by conveying the idea that employees are trusted by management.

2. Good interpersonal relationships based on trust, mutual respect, and a consequent openness between supervisors and employees seem to foster a congenial tolerance for delay and for problems. Also, receptiveness to employees' suggestions and implementation of those considered by management as sound, encourages a generalized positive attitude toward the work and more creative thinking about it. Conversely, poor interpersonal relationships at any level seem to decrease the energy that individuals can make available for productive work.

3. There is a strong likelihood that overly high or idealistic expectations may be created at the outset of a QWL program. Failure to meet these expectations then creates disappointment in management.

Regarding Implementation of a QWL Program:

1. Company personnel should see the QWL program as "theirs," and not as something done for them by outsiders. To develop internal advocacy, it may be helpful to establish an in-house steering committee, composed of representatives from all departments and levels of the organization. This committee would review progress toward QWL objectives, examine difficulties in program implementation, and perhaps suggest appropriate program modifications. In addition, the committee would attempt to facilitate company-wide understanding of the QWL program and consulting interventions.

2. A specific, understandable, and clearly communicated program is essential. Delineation of responsibilities among consultants and management should be arranged at the outset. If there are expectations for the commitment of managers and supervisors to certain aspects of a particular managerial style, such expectations should be made explicit--and degrees of freedom for individual managers and supervisors to deviate from any such expectations if deemed appropriate under certain conditions likewise should be made explicit.

3. If a consultative or participative management style is to accompany a QWL improvement effort, all concerned should understand that technical problems may be handled differently from matters of general management, personnel relationships, and provision of a good working environment. Experience suggests that a significant line of demarcation exists between these two areas; technical problems that are encountered normally require a highly specialized and disciplined approach taht involves particular expertise and experience. Thus it may not always be realistic to involve groups of people or invite extensive participation by those who cannot contribute significantly to the resolution.

4. Ambiguity about corporate support is an inhospitable condition for the establishment of a QWL program. Other adverse conditions include times of crisis (such as may be occasioned by certain start-up situations), and low levels of technical or managerial skills among persons in key managerial roles.

5. Managerial modeling is likely to be one of the most important factors for successful program implementation.

6. Training programs should give strong emphasis to teaching skills for effective leadership in meetings. Teams, ad hoc committees, or task force groups are frequently used in the various aspects of a QWL program; well-managed

meetings are critical to sustaining enthusiasm for group efforts.

7. Some personnel may perceive a conflict between QWL goals (e.g., about motivation and meaningful work) and production goals (e.g., about rates of product output, or procedures). It is important to discuss these perceptions and clarify the complementary relationship between QWL pursuits and satisfactory production results.

8. Contingency plans are needed for the QWL program as well as for other business functions.

9. Frequent review and rethinking of the QWL program and its effects are essential. When outside consultants and internal staff of an organization are engaged in a joint venture for improvement in QWL and productivity, periodic formative evaluation (such as every 3-4 months) should be undertaken regarding progress toward the agree-upon goals of the program. This should be followed by feedback to all concerned plus an understanding that there will be prompt follow-up review coupled with any "course corrections" that may seem needed. If an independent summative evaluation is planned, that should not replace or get in the way of periodic formative evaluation efforts by the company and consultants.

10. The financial reward system should be used to support the implementation of the QWL program.

11. A feedback system needs to be established to provide information about positive and negative outcomes. In an open climate where people are free to voice their suggestions and/or dissatisfactions, negative or problem feedback is in great supply; evidence of positive gain--even when it clearly is being made--is harder to come by. Special efforts should be made to find and report positive feedback so that the group can more accurately assess its programs.

12. Continuity in consulting interventions appears to be an important factor in program success. Since there is always a possibility that consulting personnel may change midstream, the following provisions should be made for role interchangeability between consultants:

    a. Extensive/intensive communication between consultants, to develop consensus on consulting philosophy, goals, and intervention strategies. Such communication would include discussion of proposed and completed interventions in terms of rationale, expected/actual outcomes, and ways in which interventions might be improved.

b. Development of team relationships with key personnel at the intervention site. This may include efforts to assure that all consultants are drawn into agreements with company staff, and that interventions are viewed as group, rather than individual efforts. Where frequent face-to-face communication is not possible (because of such factors as geographic distance from site), relationships may be maintained by telephone and written communication.

I. OVERVIEW: CONCEPT OF THE QUALITY OF WORKLIFE PROJECT AND THE VIEWPOINT OF THIS REPORT

Introduction

Crown Medical Specialties Company, a medium-sized multi-plant pharmaceutical firm headquartered on the West Coast, has been involved since late 1972 in the planning and start-up of a new and technically complex production facility in Centerton, a town in the Southeastern U.S. During this time the corporation experienced severe financial problems, and in February 1974 was bought by a foreign multinational company.

There have been more technical troubles in getting the new plant started than would usually be anticipated. Centerton (C/C) was designed to improve and further refine an already sophisticated technology. The company's financial difficulties have affected the decisiveness and clarity of planning. Despite these handicaps, this new plant of 130 employees during the period covered in this report (1973-1975) has--to the credit of all who have been involved:

(1) exceeded corporate projections for productivity;

(2) achieved an absentee rate approximately half of the regional average;

(3) met federal standards to qualify for the production of difficult-to-control biological products within less than five months after start-up; and

(4) developed (for the most part) a labor force manifesting high employee morale and satisfaction, with commitment to company goals.

The expression "quality of worklife" is a generic term for efforts that address improved work experience for the individual employee. QWL interventions also are expected to contribute positively to organizational effectiveness and productivity. Methods for effecting desired changes include systematic analysis and design of the work itself, of the work environment, and of the administrative or managerial style. Broadly speaking, the QWL concept acknowledges the complex interactions between social and technical systems in the workplace, moderated by individual differences in terms of needs, desires, or readiness for larger job responsibilities.

Glaser (1974) explains the basis of a QWL program as follows:

> The absolutely essential component of any QWL program is real and ever-present opportunity for individuals or task groups at any level to influence their working environments; to have some "say" over what goes on in connection with their work. This, in turn, requires an organizational climate and structure that really encourages, facilitates, and rewards questions, challenges, or suggestions related to improving the existing modus operandi in any way. It also requires expeditious, respectful, appropriate response to such inputs.
>
> Thus, a style of management that invites participation or consultation from members of the workforce on matters which affect them and with regard to which they might have some pertinent ideas is an essential condition for a QWL program. It is this style that tends to increase the psychological meaningfulness of work. At the same time it provides the climate and springboard from which a large variety of other improvements in the design, conditions, and performance of work can be developed (p.3).

Crown Medical Specialties Company and QWL Interest

During the early planning stages for expansion of production facilities, recommendations from Edward M. Glaser, long a consultant to the firm, led CMS's management to become aware of non-traditional ways of organizing work, and to investigate certain other companies' experiences with QWL programs. Through this exploration, CMS's manufacturing executives became convinced that the management style which would be developed in a QWL program, and the job arrangements and work environment which would be created, constituted sound business practices. Such a program was perceived as a promising way of managing that could be expected to lead to an effective operation, freer than alternative ways from dysfunctional adversary relationships, and supportive of high-quality output of the organization's products or services.

At the time of these early planning stages, manufacture of disposable hospital equipment as well as biological products was contemplated for the proposed new plant that was ultimately destined to serve as the site of this project. The production of this type of equipment is largely an assembly line operation involving considerable task repetition, and even menial manual activities. In operations of this nature it traditionally has been difficult to maintain high levels of employee productivity, job satisfaction and morale. However, this type of work environment also has proved to be susceptible to successful application of

QWL principles. In fact, CMS management had instituted on a more informal basis many of these same QWL principles in a separate and temporary facility for disposable equipment production at one of its manufacturing locations. The operation seemed to respond quickly and positively to this approach, and management viewed QWL as worthy of expanded application.

A corporate decision finally was made that the new plant facility would be limited initially to production of biological products used in human care. Contrasted with disposable hospital equipment, biologicals represent a totally different type of product, requiring meticulous control at all levels and stages of production. In addition, governmental controls and regulations enforced by the Food and Drug Administration and Bureau of Biologics dictate in great detail what must, and what must not, occur during the production cycle. These factors were perceived by company management to be a potential barrier to total QWL implementation. But with a good, if limited, experience behind them, and the assurance of continued expert support from the consultant team, the company agreed to proceed with a QWL program at the new plant.

The QWL Research Project

After the corporation had decided to expand with a new plant rather than add on to one of the company's existing facilities, and to manage it in accordance with a QWL philosophy, to the extent appropriate and feasible in relation to explicit FDA-BoB production, processing and quality assurance requirements, Dr. Glaser proposed to the U.S. Department of Labor (DOL) that they consider using C/C as a research site to test the presumed relationship between QWL and productivity. DOL offered to support this project through a research grant to the Human Interaction Research Institute (HIRI). When funded, C/C's QWL activities became identified as "the QWL project." This term was used to encompass the company's QWL efforts and the consultants'* interventions, as well as the research and evaluation components of the grant.

---

*The consultants referred to here are Edward M. Glaser, PhD, Project Director (PD); Carroll E. Izard, PhD, Principal Investigator (PI); and Mary Faeth Chenery, M.M., Participant-Observer (P-O). Drs. Glaser and Izard are by profession clinical and organization development psychologists. Dr. Izard, an associate of Edward Glaser & Associates, previously had consulted with one of the company's other plants, also located in the Southeast. Ms. Chenery holds a Master's degree in Management. Vitae and a brief statement about each of the consultant's orientation toward an effort of this type may be found in Appendix G.

The hypothesis of the study can be stated as follows: If an organization operates according to QWL guidelines (as described herein), productivity and job satisfaction are likely to reach and be sustained at a higher level than would be achieved under traditional operating arrangements. Specifically, HIRI's aims from the QWL project were:

1. To intervene through training, modeling and consulting to create a QWL program affecting all personnel in the C/C plant.

2. To ascertain the impact of a certain type of organizational development (OD) consultation offered to the management and employees of a new plant; further, to compare the new plant with another plant in the same company manufacturing similar products, which was not explicitly organized on QWL principles. The measures would be those of plant performance (productivity) and of job satisfaction (morale).

3. To observe and document the process of a new plant's getting into operation, meeting problems and learning to function effectively as it matured; and especially to demonstrate what happened as a consequence of particular consulting interventions made under given conditions.

4. To draw whatever generalizations or hypotheses for further study may seem warranted.

Explicit Theory for the HIRI Intervention at C/C

The basic principle for the design of the C/C QWL program was the link between participation and motivation. Inviting and obtaining participation from people on matters that affect them and to which they have the ability to contribute was expected to increase the psychological meaningfulness of the work, elicit ego-involvement, and so make them "industrially active" rather than "reactive" (Allport, 1945).

With the construction of a new plant, Crown had the opportunity to design the jobs with consideration for a theory of job enrichment. The primary job design guidelines as adapted for the Centerton project were as follows:

(1) a job should include production of a whole or substantial part of a product if feasible;

(2) where appropriate, jobs should be grouped into teams;

(3) jobs should (insofar as practicable) be designed to have a high degree of variety and challenge; and

(4) where possible, doing the job itself should provide feedback to the employee about his or her performance.

The work of Hackman, et al. (1974) presents a model which describes the relationship of these guidelines to motivation theory. The

underlying condition, however, was that the plant be operated and structured in ways which would permit cooperative problem solving by the participants.

The development of further aspects of the C/C intervention proceeded from logical extensions of the principle of participation. For example, in order to attain participation from employees, there must be adequate communication up, down and laterally about matters that affect the workforce. Suggestions for improvement of any kind need to be rewarded through thoughtful, prompt review leading to adoption, modification, or rejection with reasons explained.

Success for the QWL program would be heavily dependent on the actions of managers and supervisors; they would have to provide the opportunities and conditions for employees' participation. It was for this reason that most consulting activity at Centerton was directed toward managerial and supervisory behavior.

At C/C, initial approval and support for the project came from top managers, i.e., the vice-president for manufacturing and a few other key persons at corporate headquarters. The plant manager, the production manager and the personnel manager at Centerton, who were selected in 1973 before the plant opened, and who participated actively in the design of the work planned for Centerton, were highly supportive of the QWL project. We felt that support from the new C/C supervisors and managers would be generated by involving them in the further design and extension of the program.

Another aspect of implementation was to encourage formative evaluation by the C/C staff themselves through having each functional department and the top management group as a whole pause for frequent review of operations in relation to goals and ask themselves, "How are we doing, and what is called for in order to do better?" The philosophy behind this was that excellence in performance of almost any kind can be facilitated by a nondefensive, constructively self-critical style that would implement the slogan reputedly posted in Thomas Edison's laboratory: THERE IS A BETTER WAY--FIND IT! At C/C, the consultants introduced the words kiem tau to connote a meeting aimed at assessing "where we are" in relation to agreed-upon goals, and what might be needed either in terms of goal revision or program/procedure change in order to function ever-better. The kiem tau came from a research effort during the Vietnam war to interview Vietcong prisoners by having them recount what they had been doing in the hours and days immediately preceding capture. Frequently they would report, "And then had kiem tau..." meaning that upon completion of a given mission, those involved would get together at a pre-arranged place to do a "post-mortem" on their performance in the spirit of trying to learn how to do even better next time.

HIRI's involvement in implementing change at C/C took place through periodic consultation and through participant-observation.

"Participant-Observers study a process or environment by observing and experiencing it in depth" (Glaser & Backer, 1973, p. 46). The P-O may produce change by being on the spot as events unfold and by questioning, offering feedback, suggesting alternative solutions, and, at times, by formal instruction. Glaser and Backer point out that the method of participant-observation is appropriate where provision of constructive feedback is a foremost concern; it is also helpful in evaluation research where a rich and comprehensive view of a program or project is needed. Frequent contact and the development of trustful relationships with the P-O may provide more thorough data--and data otherwise unavailable--about the change process. On the other hand, such engagement with the environment threatens the researcher's objectivity. Analysis of data generated by a P-O presents difficulties, especially because of the personal nature of perceptions and observation (Glaser & Backer, 1973). The consultants who worked with C/C on a periodic basis and who were less engaged in the ongoing process could provide a balance to the inevitable subjectivity of the P-O.

ISR Involvement

At the request of DOL, an independent evaluation of the HIRI intervention and the C/C experience and outcomes was assigned to the Institute for Social Research (ISR) at the University of Michigan. The comparison data-gathering became part of the ISR research requirement. "Hard" data to substantiate or disprove the hypotheses will thus be a part of the ISR report. Among the performance factors to be measured by ISR are: productivity, quality, absenteeism, labor turnover, labor grievances, amount of down-time (after initial "debugging" of new equipment) due to theoretically avoidable mechanical difficulties, and employee job satisfaction. HIRI has worked cooperatively with ISR by advising ISR in advance of every visit by the consultants, inviting ISR representatives to sit in on key HIRI interventions, training workshops, and on meetings with individuals when this seemed appropriate and satisfactory to the client.

ISR has used pre-employment questionnaires, monthly surveys, a long questionnaire administered annually, termination forms, on-site observations every two weeks, and interviews to gather information for its evaluations. The Michigan researchers have tried to avoid intervention, but of course their presence has had an effect in the plant. One effect was to make visible the departments where job satisfactions seemed to be relatively high or low. With questionnaires to everyone and subsequent monthly feedback to each department, ISR has at times been more visible and more widely known than the HIRI P-O, which may have served to attenuate her influence to some degree.

HIRI's record will be descriptive and clinical rather than statistically evaluative with regard to the interventions and the plant's development and outcomes, except for one invited quantitative rating of the impact of the HIRI intervention on the

stated QWL objectives. This rating--by the plant's managers and supervisors--was completed approximately six months after termination of the intervention.

Comparison Study

An important part of the research design was the opportunity for a comparison study with CMS's headquarters plant. Measurements on the same dimensions in two plants producing some of the same products, one operating in a traditional management style (headquarters plant), the other operating according to relevant QWL improvement principles (Centerton), were expected to provide data bearing upon the project objectives.

It should be noted that there are differences between the two plants. For example, the headquarters plant is located in a large metropolitan area on the West Coast; the Centerton plant is located in a rural area of the South. The company's headquarters operation is large--several hundred different products are manufactured there. The Centerton plant is much smaller by comparison--as of July 1975, only a group of four biological products have been approved by the Bureau of Biologics for manufacture there. The equipment at Centerton is more modern, although not necessarily better. Certain parts of the manufacturing process at Centerton have been modified and are experimental in some respects, representing design engineering efforts to improve upon certain aspects of the headquarters plant's process. The headquarters plant is unionized; Centerton is not.

These factors were anticipated to have some bearing upon operational performance, "climate," and job satisfaction comparisons between the two plants as related to their traditional versus QWL work structure setups. Nevertheless, the QWL project has provided an opportunity to study the nature of an evolving new work organization and to learn more about QWL interventions.

A development unforeseen at the time the project was planned has been that some of the QWL concerns seemed to have taken firmer root in the quality assurance group than in the production group. Perhaps a more meaningful comparison of differences in sustained attention to QWL concerns can be made between these two groups in the same plant than between the Centerton and headquarters plants. More on this later.

With regard to the union aspect, it proved quite possible for Edward Glaser & Associates to develop a small QWL consulting project with one department in the headquarters plant in 1965-66. The particular union there is a strong and secure one, and felt no threat in management's dealing directly with the workers on QWL improvement questions. In another of the company's plants, however, with a different, smaller and weaker union, a new union regional representative invalidated an agreement made with her predecessor in that role to work with management on QWL efforts. She

threatened the company with an unfair labor practice suit unless the company stopped the program, stating that many of the ideas brought up for discussion had to be channeled through the collective bargaining machinery.

Thus, whether the presence of a union in a situation where a QWL program is being considered can be assessed as a help, a hindrance, or neutral would seem to depend on the union, the particular individuals involved, and the way the situation is handled by both the company and the union.

Viewpoint of This Report

This report is derived primarily from the diary, observations, and records of the participant-observer, the activity reports of the consultants, from the C/C staff's comments and perceptions in review of this report, and from company documentation. In light of the objectives of the research, the narrative will emphasize HIRI's inverventions, C/C's reactions to them, and the resultant outcomes.

Writing about history is a difficult, selective task. As in world history much is written about wars, so in organizational history much is written about problems. In this paper, we shall try to keep the successes and achievements in mind. The latter are harder to find out about than problems, so the imbalance portrayed may exaggerate reality.* As well, much of the richness and complexity of the vital experience of birth and growth of a new plant has not been captured, but we hope to suggest some of the depth and intricacy of the three years' experience.

*The Centerton personnel manager commented as follows at this place in his editing: "But the report overall tends to be far too negative, whereas we had and still have many successes! Some of these are now dissipating due to lack of emphasis and attention needed to keep them 'alive and well'."

II. SELECTED LITERATURE REVIEW

> Few themes recur more frequently in management literature, few problems face the practicing manager more persistently, few topics generate more debate, and few areas of management more urgently require a unified treatment than the related issues of job satisfaction, productivity, and organization design (Cummings, Molloy, & Glen, 1975, p.52).

The National Science Foundation, in agreement with the observation cited above, recently funded studies by three independent interdisciplinary teams of behavioral scientists (Cummings, Molloy, & Glen; Brower & Associates; Katzell & Yankelovich) to study the relationship between work, productivity, and job satisfaction. A question posed by NSF was: How do we increase both productivity and job satisfaction? Essentially, all three NSF-funded studies consisted of research on research--careful, comprehensive literature review and interpretations thereof; they did not undertake experimental or action research of their own. Glaser (1974) in a study funded by the Office of Manpower Research and Development, U.S. Department of Labor, addressed essentially the same set of questions from a case study approach of reported successes and failures in public and private sector organization efforts to improve the quality of worklife, and in the process to improve productivity. (The 1974 Glaser report has since been revised considerably and is scheduled to appear as a book in the Spring of 1976.) Other researchers--e.g., Blumberg (1968), Davis (1972), Hackman (1975), Herzberg (1966), Vroom (1969), Walton (1974), Work in America Task Force (1972)--also have delved into these questions.

It would appear that all of these investigators would tend to agree with Mitchell Fein (1974) that "The most effective productivity results will be obtained when management creates conditions which workers perceive as beneficial to them."

A responsive work climate which demonstrates openness to suggestions and to considering alternative ways of doing a task tends to encourage people to think creatively about the work, to become involved or "industrially active," in McGregor's terminology. Richard Cornuelle (1975) makes a useful distinction between managing with such openness and without:

> Management which manages by specifying behavior is dehumanizing and inefficient. Management which manages by specifying results is emancipating. It opens to all the possibility of inventiveness and resourcefulness...It is highly productive, because it tends to release the full potential of people, rather than some predetermined and necessarily deformed fraction of that potential (p. 50).

Katzell and Yankelovich report that "Giving workers more 'say' ...usually has favorable effects...on productivity...when the scope of influence includes goal setting, work methods, and compensation methods."

Glaser (in press) indicates that:

> Five of the most important conditions for the sustained success of Quality of Worklife (QWL) improvement programs from which there is likelihood that productivity gains also may emerge are: (1) giving all employees in a given organization or whole segment thereof an opportunity to have a meaningful voice in decisions about the design and structure of their work; (2) providing sustained support of the QWL efforts by the organization's leaders; (3) involving the line organization in designing and then assuming responsibility for the program as theirs (rather than the staff's or consultant's) so that they perceive it essentially as just a better modus operandi for human resource management which in turn is likely to result in better mission performance; (4) working out specific, difficult, but definitely attainable goals with task groups or individuals wherever this is feasible, plus a system of rewards for goal attainment, plus an adequate training program--then providing structure and frequent timely feedback to let all concerned know about progress and problems; (5) monitoring or auditing in helpful rather than "snoopervisory" ways to assist in problem solving and to assure high standards of performance.

A supporting rationale for the present study has been offered by Gordon Allport (1945), who suggested a foundation in psychological theory for pursuing the relationship between "quality of worklife" and the general quality of life in our society:

> When the work situation in which the individual finds himself realistically engages the status-seeking motive--when the individual is busily engaged in using his talents, understanding his work, and having pleasant social relations with foreman and fellow worker--then he is, as the saying goes, "identified" with his job. He likes his work; he is absorbed in it; he is productive. In McGregor's term, he is industrially active. That is to say, he is a participant.
>
> When, on the other hand, the situation is such that the status-motive has no chance of gearing itself into the external cycles of events, when the individual goes through motions that he does not find meaningful, when he does not really participate--then comes rebellion against authority, complaints, griping, gossip, rumor, scapegoating and disaffection of all sorts. The job satisfaction is low. In McGregor's term, under such circumstances the individual is not active; he is industrially reactive.

> ...The problem before us is whether the immense amount of reactivity shown in business offices and factories, in federal bureaus and schools, can be reduced... We are learning some of the conditions in which reactivity does decline... Patronizing handouts and wage-incentive systems alone do not succeed. Opportunities for consultation on personal problems are... found to be important; and group decision, open discussion, and the retraining of leaders in accordance with democratic standards yield remarkable results... In other words, a person ceases to be reactive and contrary in respect to a desirable course of conduct only when he himself has had a hand in declaring that course of conduct to be desirable. Such findings add up to the simple proposition that people must have a hand in saving themselves; they cannot and will not be saved from the outside.(pp. 18-19)

The question is how to translate Allport's insights into common management practice. How, in other words, can we arrange work situations in ways that will motivate individuals and task groups to become ego-involved in caring about relevant goal attainment and effective organizational performance?

Managements seeking improved organization performance through job enrichment, human resource development and "humanizing of work" have generated a varied range of innovative programs for improving QWL. When such programs are applied planfully and skillfully under certain favorable conditions which have been identified by Brower (1974), Glaser (1974), Walton (1974), Hackman (1975), Katzell and Yankelovich (1975), and Srivastva et al. (1975), both job satisfaction and productivity are likely to be enhanced.

Problems and Opportunities in Implementation

Where QWL improvement efforts have failed, the failures of intervention seem to be related more to the implementation of the program than to its conception. The planned change may not in fact be effected (Frank & Hackman, 1975), or perhaps the change is not supported by key personnel, and thus falters (Glaser 1974; Hackman 1974b). Generally, offering employees a meaningful say in their work seems to increase motivation to do the work and commitment to doing it well (Katzell and Yankelovich, 1975). Increased motivation and commitment, in turn, contribute to reductions in employee turnover, absenteeism and grievances, and tend to facilitate creative problem solving and improved organizational efficiency (Glaser in press).

Concomitant personal gains from QWL programs have been reported in case studies--gains such as greater job satisfaction, greater autonomy, freer expression, increased feelings of self-worth, reduction in mental and physical illness and more opportunity to broaden skills. Provision for direct sharing in cost-savings

benefits obviously offers additional incentive for sustained worker interest in such programs (Glaser, in press; Rosow, 1974; HEW Task Force Work in America, 1972).

On the other hand, not everyone responds favorably to QWL improvement efforts (Hackman, 1975; Glaser, in press). Expectations may outstrip performance, leading to disappointment. Individual differences with regard to one's desire for greater group and personal responsibility may lessen the apparent job satisfaction of some. As Michael Brower (1974) expresses this experience:

> Efforts to improve the quality of working life, especially those relying heavily on employee participation, are likely but of course not certain, to lead to increases in productivity and to cost savings. But they may not lead to increases in "job satisfaction" narrowly defined, since aspirations of workers may be raised more rapidly than fulfillment, with a resulting decline in some measures of satisfaction (p. 25).

Research studies by Oldham, Hackman and Pearce (1975), Brief and Aldag (1975), Hackman and Lawler (1971), Hackman and Oldham (in press), suggest that individuals who feel a high need for personal growth and development at work tend to respond more positively to enriched jobs than people with low growth needs--apparently because high growth need individuals more strongly value the internal rewards that can be obtained from good performance on a challenging task. Another contextual factor that may moderate the effect of enriched work "is the degree to which the immediate work environment is satisfying to employees. Specifically, when employees are not satisfied with their pay, job security, co-workers and/or supervisors, their ability to respond positively to a job high in objective motivating potential may be severely diminished" (Oldham, Hackman & Pearce, 1975). Thus, there appears to be a threshold which needs to be achieved to satisfy what Herzberg (1966) would call the "hygiene" factors before the intrinsic-to-the-job "motivators" such as opportunity for achievement, recognition for that achievement, responsibility, advancement, etc., can take effect in the sense of enhancing ego-involvement in one's work.

III. CORPORATE STRUCTURE AND THE PLANT

The Corporation and Its Products

CMS was a long established family-controlled firm until February 1974 when it was acquired by a foreign corporation. The company's main product lines are pharmaceuticals, disposable medical equipment, biomedical materials, veterinary products and consumer items. The company is now a world leader in the production of certain biological products.

The Centerton plant was built to increase biological processing capability, although expansion into other product lines was expected. There are other plants in the corporate system. Of these plants, only the ones at headquarters and Centerton produce biological products. Numerous other products are manufactured at the headquarters plant, where the corporate home office also is located. The branch plant managers report to the vice-president of manufacturing, although in the Centerton plant's early stages the plant manager reported to the chief engineer.

The Plant - Production Setting

Plant layout includes four separate buildings (Administration/Warehouse, Quality Assurance (QA) laboratory, Engineering and Maintenance (E/M), and the Production facility), joined by long corridors. It is an exceptionally large plant, and the distances make rapid communication difficult. There is limited access to most areas in the production building because of sterility requirements and contamination dangers. Production supervisors' offices are in a restricted area, and their department managers' offices are in the unrestricted section. Physical and procedural barriers hinder their frequent face-to-face communication.

Some sources of work pressure are that certain of the work rooms are very cold; that employees are acutely aware of their responsibility to maintain sterility of the product; that employees are aware of the potentially disastrous consequences of mistakes. They are working with very expensive raw material which is at the same time very delicate; a slight temperature change can destroy thousands of dollars of product in a very short time.

Extraction

The extraction process separates the raw material into its many components in order to use the scarce source material more efficiently. The production technology itself is complex and proprietary. Substantial on-the-job training is required for supervisors as well as for technicians and operators.

A minimum of three months of processing and testing is required before the finished product is ready for sale. Raw material arrives at the plant frozen, and the production process begins under carefully controlled conditions. A team of five members handles this portion of the process. Their work is supervised by the extraction supervisors on a rotating basis.

The extraction teams process the liquified material to the various powdered components. Their work involves the complicated tasks of production, equipment maintenance, and record keeping. Each team, consisting of six persons and a supervisor, works 12-hour shifts (four days one week, three days the next) and alternates monthly between day and night shifts.

The dry powder is delivered to the Filtration and Filling department, where it is dissolved and treated, then sterile-filled into bottles, pasteurized, and incubated. Each team handling this part of the process consists of four members, plus a supervisor, working three shifts, five days a week.

After incubation, each product lot is "finished"--that is, inspected, labeled and boxed, then placed in a holding area for final release. The day shift packing operation is the job of an "extended" team: a group of five full-time finishing operators helped by 13 part-time operators. Once released (approved by QA and the FDA's Bureau of Biologics), the product is moved to the shipping area of the warehouse for distribution.

Effect of QWL Considerations on Layout for the Plant

A question has been raised about whether the original planning for Centerton to facilitate the organization of work by use of small task teams and job enrichment concepts actually resulted in any differences in designing the plant, compared with the way it would have been designed if there had been no plan for a special QWL project.

As already stated, the projection for this new plant was that it would manufacture disposable equipment (DE) and biological products. The engineering layout for the DE portion of the plant definitely was influenced by the concept of avoiding the long, continuously moving conveyor belt with a line of workers standing alongside, each doing his/her small assembly task, while the product moved automatically to the next person in line to do his/her thing. Instead, influenced by Volvo, Saab-Scania, Procter and Gamble, Donnelly Mirrors, and other firms whose QWL efforts have been reported, the DE portion of the plant had rooms on the drawing boards to accommodate only a limited number of people (15-25) who would form identifiable task teams responsible for producing or assembling an entire product or related line of products. Or, if the product they were working on needed to be broken down into sub-assemblies, Group A would deliver their

sub-assembly to Group B, who would add their segment, deliver what they now had to Group C, etc., until there was a finished product ready for final inspection and shipment. The parent group would purchase sub-assemblies from sub-assembly groups.

When it was decided later that Centerton would not make disposable equipment, at least upon plant start-up, but would concentrate only on an expanding line of biological products, the DE segment of the plant was held in abeyance, and the drawing-board plans for DE were not implemented.

The extraction and filtration technology in biological production is not an assembly line operation, and those procedures are tightly controlled by BoB requirements. Thus the QWL/job enrichment concepts had little or no influence on engineering design per se for that portion of the plant. The QWL concepts influenced the way people were organized, and the manner in which they would be consulted or invited to have a "say" in the division of labor to get the necessary work done.

The filling operation (including labeling, etc.), for reasons of efficiency as well as sterility, needs to be a repetitive machine operation tended by people. Thus, the engineering layout for this operation was not materially affected by the QWL planning. However, the staffing of the task, such as the use of 13 part-time operators who performed other tasks with the remainder of their time, was influenced by QWL concepts.

Overall Organization Structure at the Plant

The original design for the plant's management structure was created in the headquarters under the assumption that rapid growth in the number of different product lines would soon occur at the plant. In light of this assumption a relatively large plant management group was employed: plant manager, production manager, extraction manager, filtration manager, quality assurance manager, accounting manager, personnel manager, a management-level specialist in good manufacturing practices, and an engineering and maintenance manager. (See Figure 1)

The QA department comprises about 25% of the plant population and one-third of the managerial and supervisory personnel. Its biology laboratory is responsible for environmental monitoring (e.g., water, air, facilities cleanliness) and for product testing for sterility, potency and pyrogenicity. The biology assistants go into production and other plant areas to do sampling and may frequently have contact with production technicians. The chemistry section tests raw material, in-process, and final product samples in the laboratory. The QA analyst and his assistant function as inspectors during the final packaging operation and sample and test raw materials. The release coordinator oversees the gathering of supporting documents about the processing and testing of every product lot, assuring that all regulations are met before allowing shipment of the product. In addition, an independent auditor works to insure compliance with good manufacturing practices (federal standards).

FIGURE 1

ORGANIZATION STRUCTURE, MAY 1974

34

The QA managers and supervisors frequently function as consultants to the production and E/M departments as problems arise or changes are considered. There is a natural tension between these latter departments and the QA department in part because the QA manager has the power to stop production and in part because the QA personnel are perceived as having "the easy life": a one-shift operation with sufficient staff, properly functioning equipment, and without the kind of pressure or urgency felt in production or maintenance.

The E/M department is responsible for buildings, grounds, utilities, and equipment maintenance. Complex refrigeration, steam, and sterile water and air systems must be kept functioning at all times. A number of the maintenance and instrument technicians have specialized training. This department has been overwhelmed with work orders since first moving to the plant site. Even basic construction remained to be done after the move in some plant areas. When coupled with machinery check-out, repair, and, occasionally, redesign, the burden on the manpower and the administration of this department became quite a difficult problem.

The accounting department, personnel department, and the plant manager's secretary complete the company staff. This group of 11 works during the day shift in the Administration Building and is generally thought of as the people "up front." Many members, though, do get out in the plant--sometimes to get information needed for their work, other times to help in the finishing operation or just to learn about the rest of the plant.

The entire plant was conceived of as one team with common goals. Each department also consisted of one or more teams, with the exception of engineering. The nature of engineering and maintenance work generally required the technicians to work individually or in pairs. Thus, team organization was not emphasized in that area of work.

A number of changes in organization structure came about during the project's course. They will be described in later sections of this report.

Geographic and Personnel Characteristics

The Centerton plant is located in a rural area in the southeastern U. S. It is approximately 20 miles from the nearest large city, which has a population of 150,000. Centerton's population is a little over 3,000. Many of the managers and supervisors have moved to the area from out of the state, generally from a more urban setting.

Most of the plant production jobs require completion of high school, while management or supervisory positions require substantial biochemical training. The production process is very capital-intensive: the plant, in spite of its size and complexity, can be operated by about 130 people (29 of whom are managerial or supervisory personnel). The following table provides descriptive data regarding Centerton personnel.

C/C Employee Breakdown

As of 10/28/75

(some employed only part of 10/75)

CLASSIFICATION	N	%
Hourly Production Employees:	65	47.8
Management (Supervisors/Managers):	28	20.6
Administrative (or Other):	43	31.6
TOTAL:	136	
Age Ranges:

TOTAL:	40	

* Excluding non-exempt office/clerical employees.

IV. QWL EFFORTS AND OUTCOMES

Project Planning and QWL Goals

Initial planning for the plant was handled with the Centerton management group on the West Coast in 1972-1973. A memorandum of understanding in February 1973 established basic agreements between CMS, HIRI, DOL, and IIR about the project. The memorandum states CMS's decision to use a team structure and provide opportunities for job enrichment at the Centerton plant. It confirms plans to use HIRI's assistance in training and HIRI's consultation with the plant manager and personnel manager. In connection with plans to provide technical training for all new employees, the memo adds that two-way communication was to be encouraged and that all employees should be invited to raise questions or offer ideas (see Appendix A).

The C/C project concepts as established with plant management before plant start-up were that:

1. People should have some influence over decisions in the workplace that will affect them. They should have opportunity to participate in constructive problem-solving on matters of legitimate concern. (Or stated another way, the organizational climate should be respectfully responsive to almost anything that employees may suggest for improvement of the work arrangements: then, from such a responsive climate, employee desires for involvement in decisions that affect them, job enrichment if wanted, etc., can emerge and receive serious attention.)*

---

*The primary emphasis on creating a "responsive work climate" where desires for job enrichment, small task teams, or other progressive developments can arise and perhaps be fulfilled along the way, rather than attempting more advanced QWL start-up techniques (such as used at the General Foods pet food plant at Topeka or at the Mead Corporation's paper mill at Stevenson, Alabama) has been deliberate. The reasons for this were: (1) a belief by the HIRI consultants that Centerton management was not psychologically or educationally ready for anything more than the three goals stated here; (2) the company's and HIRI's shared perception that the delicate, super-sterile, precise temperature and other controls necessary for the manufacture of these biological products required technically trained supervisors (as contrasted with autonomous work groups without clearly designated "supervisors" used in the Mead Corporation QWL project); (3) whatever more systematic QWL approaches might be desirable and appropriate could better evolve over time from the original primary goals, and if they did (or did not) evolve, the "learning readiness" question thereby would be met.

2. As far as possible, the company should provide jobs which will be experienced as meaningful: jobs which have substantial variety, challenge, task identity, task significance, and opportunity for learning.

3. The work force should be well-informed about company events and decisions, and should give and receive frequent specific feedback about job performance and about problems experienced.

In short, the key concepts could be labeled participation, communication, and meaningful jobs. In light of these concepts, the supervisory style which we aimed for in the new plant was that of team leader rather than "boss."

General Consulting Strategy

Following the West Coast basic CMS-HIRI-DOL-ISR agreement about the project, the PI, aided somewhat by the PD, consulted intensively with the Centerton plant manager and the plant personnel manager in planning, selection, and training. The PI visited the plant 15 times between March 1973 and June 1974, the visits lasting between two and three days. The PD visited the plant six times for about two days each time between July 1974 and July 1975, with the March and June 1975 visits made in conjunction with the PI. The P-O joined the HIRI group in October 1973, starting full time at the plant in May 1974.

When the PD visited, he usually flew in on a Sunday, would meet with the P-O (and PI when available) for a planning session that evening. Work at the plant site usually began at 8:15 a.m. the following day, and would continue until about 6:00 p.m., or into the evening on several occasions. The last consulting visit occurred in June 1975, just before the P-O discontinued full-time presence at the plant.

A subsequent visit by the PD, PI and P-O in October 1975 was made to discuss the C/C staff's review of a draft of this report. Another visit was made by the PD and P-O to the corporate office on February 2, 1976, for a meeting with company top management to review and discuss a draft of the final report. A copy had been submitted for this review purpose to appropriate persons at both headquarters and Centerton. The corporate president, vice president for manufacturing, corporate industrial relations manager, and three other persons on the headquarters staff, along with the Centerton plant manager and personnel manager were present. At the conclusion of this meeting, the CMS people were invited by the PD to submit for consideration by HIRI any editing of the report they might deem desirable to improve its accuracy or to give a more rounded description of what took place with reference to the project. This invitation was accepted, and

responded to in a comprehensive, constructive fashion. Many of their suggested changes have been incorporated in this final version.

Four major strategies were used to try to attain the QWL goals: (1) training of management and employees; (2) modeling of autocritical, nondefensive, openly communicative behavior by the HIRI consultant team; (3) observation and feedback; and (4) consulting with individuals and functional groups in pursuit of the QWL goals. The HIRI team was linked to Centerton primarily through the personnel manager in the early months of the project. It was expected that he would nurture the project, particularly through his training responsibilities and by active personal interaction with the people in the plant.

During the training period, HIRI taught and used problem-solving methods for dealing with communications and human relationship problems through nondefensive confrontation of differences or of things that were not working well. The HIRI team supported C/C's efforts by: (1) providing a participative model when at the plant; (2) suggesting alternative ideas and solutions (when we had any to suggest) consistent with QWL concepts; (3) offering observations of group process at various types of meetings; (4) offering observations of a given individual's managerial style; (5) serving as a sounding board and resource for problems that individuals or groups might present to them in their role as consulting psychologists; and (6) counseling personally with the plant manager, the personnel manager, and other key personnel.

Observations and feedback were offered, but it was a deliberate, if tacit, strategy after the training period (usually) to let C/C request consultant and P-O resources rather than to present uninvited proposals for change or development. In this way, whatever was done would legitimately be seen as C/C efforts. Solutions would be attuned to real needs in the situation, and self-reliance would be promoted in the organization as preparation for the eventual withdrawal of consulting resources.

Selection, Training and Initial Effects February 1973 through mid-May 1974

A timeline of major plant production and consulting intervention events during this period is presented in Figure 2.

Plant Goals

The objective during these months was for C/C managers and supervisors to hire a workforce, complete training and facility preparation, and begin production.

Intervention Focal Points

HIRI's interventions were focused on organization development guided by QWL concepts. This included training in personnel

selection and assistance in working out productive interpersonal relations.

The HIRI group felt that the QWL goals could be achieved only when managers and supervisors were effective in central managerial tasks (e.g., planning, coordinating, basic supervision). During the training period for new supervisors and managers, both HIRI and Centerton top management assumed that all participants had a reasonable managerial competence. The Crown corporate management then provided technical and some supervisory training, while HIRI provided training and assistance in those areas and skills specifically related to the QWL program (description of training workshops follows).

Consulting Styles and Tasks

The QWL project was closely identified through this period with the HIRI PI's consultation. He developed a close rapport and working relationship with the plant manager, the personnel manager, and other key members of the management group. Much of his consulting centered on assisting managers and supervisors in solving problems involving interpersonal relationships (frequently manager-supervisor relationships). Modeling, or the way he consulted, was often as important as the content of his help. This consultant endeavored to demonstrate listening skills, was very open to change, was able to get normally reticent people to make contributions in meetings, and could readily draw and teach principles about behavior from everyday events and problems. He facilitated the resolution of interpersonal differences through modeling non-defensive confrontation.

The P-O, having joined the project during the second training workshop in October 1973, initially served in the role of assistant to the consultants, gradually becoming more of a direct participant and resource to the workgroup.

Consulting Interventions, Outcomes, and the Organization's Development

Selection and training of supervisory personnel. HIRI provided input into the selection and QWL education of managers, and the design of jobs for the Centerton plant while planning still was in progress at corporate headquarters in 1972 and 1973.

When a personnel manager was hired for C/C, the HIRI PI began to work with him in Centerton. Together, they drew up a list of attributes which they felt would help select employees (managerial and non-managerial) who could function effectively and comfortably in a participative management (PM) atmosphere (see Appendix B). Selection of supervisors was also contingent on a requisite technical background. The pool of candidates who were technically prepared for the complex jobs being filled was limited, thus restricting selection options. Only one supervisor out of seven hired had had experience with the specific types of biological products to be produced at Centerton. Two new

managers had had little or no managerial experience, but they did have some requisite technical experience. When completed, the selection process for managers and supervisors seemed to have favored people who were attracted to the concepts of QWL, who were intelligent, ambitious, idealistic, and who seemed to have good development potential, over those chosen primarily because of extensive managerial or supervisory experience.

Three workshops for managers and supervisors were presented jointly by the HIRI consultants and the personnel manager during the pre-start-up training period. Their dates and relevant topics are outlines below:

October 1-3, 1973	Participative Management-Principles and Techniques for Motivation Principles and Techniques of Communication Leadership Styles Interpersonal Feedback
October 24-26, 1973	The Quality of Worklife and Productivity Job Enrichment Principles, Job Design, and Case Problems Team Approach to QWL Improvement
December 18-21, 1973	Individual Interviewing in Employee Selection Techniques, and Skill Practice.

The training workshops provided practice in the concepts of QWL, job enrichment and exposure to an open, informal style of leadership. Workshop members became accustomed to hold critiques after a task, share perceptions of the outcomes, and plan for improvement "next time" based upon learning from the critiques. The workshops focused on the aspects of QWL improvement that were different from the more authoritarian, less participative management style that the managers and supervisors previously had been accustomed to, whether at Crown or in other companies for which they had worked. The HIRI consultation did not attempt, however, to provide "standard" management or supervisory skills, which it was assumed (incorrectly in some cases, as later events proved) that managers and supervisors already had. And certainly HIRI presumed no competence or responsibility for technical training, which was supplied by corporate headquarters, equipment manufacturers, and university courses.

HIRI concentrated in the workshops on concepts and techniques of nondefensive communication and problem-solving. The process of the workshops and concurrent experiences in technical training offered some tangible discussion and practice opportunities. However, the trainees (managers and supervisors) were not yet engaged in the bread-and-butter process of production and quality control, and hence there was a degree of unreality to the problems faced.

BEST COPY AVAILABLE

Job design. Job enrichment ideas stimulated by the consultants were further developed by a visit to another company successfully using advanced QWL principles (which was suggested by the HIRI PD), and by a symposium on worklife improvement held on the West Coast. These ideas were considered by CMS engineers in the design, layout, and staffing planning for the Centerton operation. For example, one production team was responsible for the process from receipt of raw material through roughly half of the production procedure, involving a substantial variety of tasks, high responsibility for product quality, and probably an even balance of individual and group efforts. A sense of closure was felt at the end of this team's work with one batch of the material, since the product could be followed as a discrete lot through further stages and final sale. As well, some of the material was sold as final product from this intermediate point.

The job design components of providing meaningful work were implemented during the plant start-up (after March 1974). Job boundaries were large, with much task variety in them. Most people had the opportunity for some autonomy in their tasks. The major factor working against sustained good morale at this time was a lack of sufficient work for production operators (about 30 people) as a consequence of the start-up problems experienced in getting equipment delivered and put into operating order. Sustained difficulties in overcoming process problems also were a source of frustration.

Job design was learned in the workshops, but there was less opportunity during the training for each member to practice leadership/managerial skills and truly to clarify and refine for himself a concept and style of PM; thus at the end of the training period a number of unanswered questions about PM remained. For example, supervisors wondered about how assertive to be and how much authority they had to make decisions, or whether their subordinates should participate in all decisions. Their uncertainty about exercising leadership, facilitating and making decisions, was exacerbated by their inexperience in leadership roles and their lack of technical expertise. Insufficient workshop time and not having ongoing team situations to which to relate anticipated problems tended to limit discussion and resolution of these concerns.

Selection and training of nonsupervisory personnel. During January 1974, the supervisors with HIRI assistance were engaged in the interviewing and selection of production operators. The employees selected in February and March 1974 tended to be young people with little production experience. Many had quite idealistic expectations for the Centerton plant and its implementation of the QWL program (expectations presumably generated by contact with the supervisors). Candidates with relevant technical experience were not readily available in the area. Consequently, managers and supervisors tried to select employees who would fit well in the new organization atmosphere. According to the ISR analysis of the selection procedure, a foremost factor for selection was a high rating on "ability to listen understandingly." In the training of interviewers, the PI tried to emphasize the complement of this--"ability to communicate clearly."

In May 1974, when repeated delays in the anticipated start-up date caused many difficulties, several managers questioned whether it was wise to have allowed the inexperienced supervisors to guide the selection process as much as they did. Some managers, in retrospect, felt that a better balance of age/maturity and production experience among the new employees might have helped avoid some of the problems and forestalled some of the frustration and disappointment encountered as start-up was postponed.

Quality Assurance (QA) employees were interviewed and hired by the QA manager and the lab supervisors; HIRI's influence here was only indirect (through training and communications about the QWL program). Maintenance technicians were hired by the plant engineer. Prior technical training (a minimum two years of college for the QA department) or experience was required for these positions. The selection process here seemed to have more easily assessed variables (such as relevant college coursework) than that for production employees (who were assessed by subjective judgments about personal attributes).

In March 1974, a three-day Orientation and Training for New Employees program was presented, coordinated by the personnel manager. The training group consisted primarily of the new production operators, clerical personnel, and supervisors. Four new supervisors from the QA department also attended these sessions, as they had not taken part in the initial supervisory training. This orientation was their primary introduction to the QWL program and management style. (The QA lab assistants whom they would supervise had not yet reported to work.) Although maintenance technicians had been hired, few attemded because of the heavy workload and their manager's priorities.

The participants responded very enthusiastically to the Orientation Program overall, and to the Team Training Workshops. Much interaction was generated in the group tasks. Later, in their task teams, employees continued to contribute ideas and suggestions about the work. The HIRI P-O learned from some individuals that there were occasional misunderstandings and fears about giving feedback--fears that in trying to tell superiors what appeared wrong or in need of review, there sometimes might be defensiveness leading to retribution. Reactions such as these are normal within the context of QWL efforts. All in all, however, there was a significant degree of openness and trust in the early stages, with the result that many people experienced C/C as a superior and unique place to work.

Managers' and supervisors' group development. The production supervisors and the two production department managers formed a highly cohesive, enthusiastic group during the early training period. In the development and training of the entire group there had been much emphasis on an openness to change, on flexibility, and on challenge of ideas, decisions, and standard operating procedures. The openness and initial trust fostered

by consultant modeling were supported by the willingness of the top managers (the plant manager, the production manager, and the personnel manager) to accept and take part in this style. It is important to note, though, that this behavior and the cohesive group developed during training had not yet been exposed to the stresses of the real work situation.

As time went on, small misunderstandings combined to weaken the group's cohesion, openness and enthusiasm. When possible, the consultant tried to create a learning experience out of the misunderstandings, particularly by demonstrating the serious interference with effective work that can be caused by unspoken angry or hurt feelings and by pointing out the role that innocent misperceptions frequently played in communication difficulties. The stress caused by these misunderstandings between supervisors and a few managers seemed to test each person's faith in the participative method; their idealism received its first tarnish. They had to be helped to recognize that such problems probably would be more likely to occur under a traditional style of management, wherein there would be less opportunity for constructive resolution.

In the first eight months, frequent 12 to 16-hour workdays drained people's energy. Production and maintenance managers and supervisors tended to become absorbed in technical and mechanical problems and to defer anything that was perceived as unrelated or nonessential. "Sharing the problem with the people who are involved in it" was viewed as a time-consuming burden by some, and because "the people" were new, it was felt that few of them would have appropriate contributions to make to many of the problems. Nonetheless, in a number of cases the relationships between supervisors and teams were sufficiently good and close that people felt involved and "participant" without any extra or formal efforts.

One or two key managers seemed unable to meet commitments they had made to other departments, and this exacerbated the tension already generated by many production delays. Discouragements and resentments were expressed by the workforce to their supervisors and by the supervisors to their managers. Although openness of constructively intended complaints had been encouraged and was now practiced, actual support of that practice was not adequately forthcoming. Self-confidence and the enthusiastic aspect of morale were thus partially eroded. In exercising their somewhat unusual freedom to identify problems, people sometimes forgot to take stock of and to mention the positive accomplishments.

Despite this voicing of complaints, which may have served as a helpful safety valve, the experience of most employees during this time was reported on the ISR surveys and to the P-O as quite good. Employees expressed surprise and pleasure at their relationships with supervisors and the friendliness of managers, and attributed much of this to the QWL project. Objections were made about the delays and the amount of housekeeping the job required, but there was a surprising tolerance for the problems. It

is possible, of course, that the unemployment rate at the time may have tended to make job holders more willing to endure the unpleasant aspects of their work situation.

Decision making without participation. On occasion a manager may need to make a decision without others' involvement (particularly in connection with technical problems), or contrary to what his subordinates would advise. (This point should have been emphasized more by HIRI in the training.) The first time one of these instances arose at Centerton, when the plant manager made a certain policy decision without inviting consultation, voices were raised against the method and the decision. (The decision had to do with requiring overtime work for all plant personnel on a weekend, and on very short notice.) This experience caught the plant manager a bit off-guard, and tended to make him suspect the loyalty or managerial maturity of his people. He did not recognize that he had failed to communicate his need to make the decision alone this time. On the other hand, he clearly needed the flexibility to make such a decision, and could legitimately expect support for it, though it would be more consistent with QWL principles if he had previously informed key people of his reasons for making the decision. The outcome of this experience was wariness on both sides: The plant manager became wary that the participative style might not give him the flexibility in decision making that he needed, and the managers and supervisors became wary of both the plant manager's commitment to PM and his sincerity about their freedom to challenge. The P-O and consultants made observations along these lines to the plant manager and his key staff.

Observations on effects of delay in getting into production. By May 1974, the Centerton plant had not yet begun production for a number of reasons. Some of the problems were within the Centerton management's control, while others required engineers from headquarters or equipment manufacturers' representatives to help solve. The production delays meant that the production employees who were hired in February-March 1974 often were idle. Without real work for them there was little incentive and, it seemed, few opportunities to solve work-related problems or participate in decisions about work arrangements. Supervisors preferred not to hold regular team meetings for lack of an agenda, and the habit of periodic communication about unresolved problems did not become established. Because the production teams were small, informality was usually an adequate style, and systematic review of progress on problem-solving efforts was not institutionalized. As a consequence, the groundwork for future adherence to that kind of method of operating was not laid.

Characteristic personnel problems. In each of their visits during this period the HIRI consultant and the P-O were asked for assistance in dealing with personnel problems. Two particularly sensitive problems were addressed. One concerned a young extraction supervisor who was having difficulty mastering the technical material required for the job and in providing leadership to a team. In spite of much concentrated help from colleagues and consultants, the outcome was his resignation.

Although their efforts failed, the process of group members all cooperating to try to help their teammate "make it" probably served to strengthen group morale.

This was the first loss to the original team of managers and supervisors, and it was disappointing. The supervisor hired to replace this man would not have the same training and team development experience.

The procedure used to orient and train the replacement supervisor reflected the increasing pressure of little time and great need to produce quickly. Under these circumstances the personnel manager held an orientation discussion with the supervisor on the first day of employment. Technical and supervisory training was left up to the department manager until enough new supervisors were on board to justify holding a formal supervisory training program (several months after the supervisor joined). At this later time it often was difficult for production supervisors to attend.

A second sensitive problem receiving much consulting input was the need to develop better working relationships among the production manager and his two department managers. Tension among the three men became apparent during the Spring of 1974 as major and minor problems remained unresolved. The consultant tried to improve their ability to work together by helping them to communicate and to confront differences in perception, values and style.

The consultation seemed to increase communication and understanding among them during, and for a short while after, the consulting visits. Many of the differences between the three managers concerned issues on which none was inclined to compromise. For instance, one department manager insisted that all production equipment and set-up be nearly perfect before any actual production began, whereas the production manager felt that with some less-than-perfect equipment, operating problems could be worked out better in the process of carrying out the first trials. The consultants felt it might be possible for the men to work effectively in spite of their differences. Little gain in working relationships was seen, however, during the early Spring of 1974. Eventually, one department manager was terminated and was not replaced. The role of the consultant during subsequent meetings with the plant manager about this problem was to help clarify his own appraisal and feelings about the persons involved, the situational requirements as he saw them, his alternatives for dealing with the matter, and the probable short- and long-range consequences or outcomes of the several alternatives.

There were some other personnel problems involving performance deficits on the part of certain individuals where the consultants were able to help the concerned superior identify and better utilize the individual's strengths rather than harp on limitations which were not importantly relevant to job performance.

Discussion

Leadership and autonomy. The appropriate role and style of leadership, particularly in connection with implementation of the participative method, had been an early concern. Supervisors had been given much freedom and responsibility to manage their teams and had been promised the opportunity to participate in management decisions and problem solving to the extent that this would be pertinent and appropriate. In attempting to carry out this philosophy, some supervisors were worried about stifling participation if they were to give orders or firm directions to their teams. Supervisors also were concerned with receiving too much direction from their superiors. Autonomy within their team and with their production responsibilities became a well-defended goal --to the point that supervisors and department managers seemed respectively possessive or "territorial."* Part of this behavior probably can be explained by the background of these supervisors as high individual achievers (i.e., their previous progress and promotions had been primarily dependent on individual efforts, rather than team efforts). In the C/C environment, which tended to encourage group achievement, individual achievement did not seem to be rewarded as it had been in the past, yet this behavior was natural and had been successful for them. To some extent, C/C sent paradoxical messages about its team structure: People were expected to perform as a team but their performance was evaluated on an individual basis. Perhaps not enough was taught in training about cooperative behavior and individual/team issues; and managers had perhaps not given enough thought to the motivating factors for the supervisors. In any case, territoriality or resentment by subordinates of involvement by superiors often was dysfunctional to the solution of difficult and persistent problems. The consulting strategy was to try to mitigate these feelings by offering possibilities for solving problems as they arose, rather than to try to eliminate the struggles for autonomy. As the supervisors gained experience in their new roles, their concerns about autonomy seemed to subside.

Leadership and participative management related to the conduct of meetings. It became apparent during this period that there was insufficient skill among managers and supervisors with regard to (a) the kinds of subjects which warranted meetings, and (b) ways to conduct meetings effectively and efficiently. Many meetings were held, a number of them concerned with very basic or routine problems--problems which the plant manager felt should have been dealt with immediately by a supervisor without need for a meeting. The plant manager further felt that these meetings for solving such basic, routine problems during a start-up phase were

*Editorial input from CMS suggests inserting the following two sentences at this point: "Behavior might also have been influenced by their training which gave the impression that under PM, each manager and supervisor would have absolute responsibility and jurisdiction in his area. Little consideration was given to the fact that the production manager and plant manager also had stakes involved and were ultimately responsible to get the plant into production."

impractical and too cumbersome to be effective and successful. Viewing this as a major factor inhibiting expeditious start-up of the plant, he chose to put his faith in one-to-one relationships, working directly with individual department heads to solve specific problems that had to be overcome before the plant could get into production. Some meetings thus suffered from different individuals' perceptions about the need for them and some poor quality of certain meetings was attributed to the (probably) excessive number of them.

Informality and abstractness of leadership in conducting meetings often meant that some of them did not end in closure or agreement. Thus, tasks were not accomplished. Frustrations arose when decisions were not reached, and managers, in particular the plant manager, began to prefer individual to team efforts. Meetings were not given up but, as stated above, the plant manager began to put his faith in one-to-one relationships. These difficulties caused frustrations with the QWL method (which was perceived incorrectly by some as emphasizing that meetings be held on all sorts of problems, whereas the intent was to hold them only when valuable and appropriate for optimally effective operation). Managers and supervisors began to question whether a QWL program could constitute an effective and efficient managerial method. From the consultants' point of view, difficulties in the management of meetings resulted from deficits in the leaders' organizational skills, rather than problems inherent in the QWL method.

Testing the QWL Concepts under Stressful Start-up Conditions: Mid-May 1974 through Mid-February 1975

Major production and intervention events of this period and the next are summarized in a timeline in Figure 3.

Plant Goals

The goal for the plant during this period was to achieve qualification--that is, licensing for the production and sale of certain pharmaceutical products. Financial pressure on the corporation required that this be done as quickly and as inexpensively as possible. Although production employees were hired in February 1974, it was not until June 1974 that the first batch of raw materials was committed to the production system. The initial biological extraction product was first filled into final containers in September 1974, with a first shipment released for sale in December 1974. Licensing procedures for the second product were completed in February 1975.

Intervention Focal Points

The HIRI project team became more informed about and available to the C/C organization in mid-May 1974, when the P-O began working at the plant on a full-time basis. (See Appendix C for the Memo of Introduction of P-O to the Plant and List of P-O Activities.)

HIRI's goals for this period were to help where help seemed most needed--in trying to facilitate effective management through improved communication, listening, responsive feedback and problem-solving skills of managers and supervisors. The particular focal points during this time centered on efforts to help C/C managers and supervisors progress toward the following objectives:

(1) provision of increased communication and feedback about events and problems, particularly more specific feedback about performance, formulated in statements about behavior so that a person would know specifically what to change;

(2) direct and more immediate confrontation of problems that needed resolution;

(3) explicit statement and communication of goals, especially about the QWL program, and also about production;

(4) increased participation with managers by supervisors and employees in matters concerning their work;

(5) sensitivity to the personal development and progress of individuals; and

(6) development of better defined structures, arrangements or systems (such as career advancement systems) to support QWL and production goals.

The Participant-Observer's Method

The P-O used a HIRI format to record interventions, outcomes, and assessments of the transactions. An excerpt from the intervention about periodic reviews of the organization is presented as Figure 4. More detailed daily activity records were kept.

The P-O's style of intervention was to work with individual managers and supervisors, and occasionally with a departmental supervisory group, making observations, giving feedback to them, suggesting alternative ways of doing things, and offering resource help for system development. The choice of a less outspoken, individual-centered style resulted from personal preference, an awareness of her "guest" status in the organization, and a sensitivity to the substantial pressure managers and supervisors were experiencing from the time delays in getting into production, with resulting exacerbation of corporate financial dilemmas.

This one-to-one intervention style is illustrated in the following exchange (quoted from an activity record): "Observations of a QA meeting on seniority policy. Supervisor commented once, 'Let's take a vote.' Intervention: as an aside to him, P-O said that voting sometimes results in an unhappy minority. Outcome: he later commented that that was a good observation. Since then, he has facilitated decision by consensus."

Figure 4

INTERVENTION FOCAL POINT	INTERVENTION	ACTUAL OUTCOME
Periodic Review of the Organization 10-20-74	10-7-74 Suggested to plant manager to have kiem tau: "step back and look"	10-7-74 Reply: plant manager, "we need to step in & look." 10-18-74 Plant manager mentioned to me that he wants to get together to talk about a number of items, including kiem tau.
DESIRED OUTCOME	10-22-74 Suggested to production manager a need for kiem tau	10-22-74 An angry response from prod. mgr." wants no kiem tau with rest of plant managers and supervisors until his own house (production) is in order. "What good does it do to share our specific problems with other depts?" "Some people think they can solve any problem with a meeting."
On a regularly scheduled basis management will plan and hold a review of the whole organization, its social and technical systems. The critique will be positive, not blaming; with the intention of learning from past experience and changing where needed to better deal with the future. The review will involve all personnel, though not necessarily at one time.	11-4-74 In discussion with plant manager I included "have a review" as one of several things I would do differently here.	11-4-74 Reply: "I can't get excited about it now" until licensing is done.
VALUE OF OUTCOME Ref: Theoretical Framework		11-14-74 In meeting with plant manager, personnel manager, and his assistant, time for review with managers and supervisors set for Thurs. a.m. 11-21-74.
To enhance growth & development and to be responsive to changing situations, it is important to monitor the organization's status. The review provides an opportunity for management to plan change* and for all members to offer suggestions in a non-threatening environment.	11-18-74 Asked for suggestions for structure of the meeting from several managers. 11-19-74 Asked production dept. manager for input to review. 11-19-74 Prepared notes for a review giving suggested outline and comments for review structure, gave to plant manager.	11-18-74 Plant manager sent memo out to all managers and supervisors announcing kiem tau or review.
*To proact	11-20-74 Prepared Statement of Objectives, Oct. 73 & Feb. 74 for handout and on flipchart.	11-20-74 Planning meeting-personnel and plant managers and P-O-using notes as basis. Plant manager rehearsed some of his ideas for presentation to the group.

A weekly overview of problems or areas of concern and planned follow-up by the P-O was provided to the consultants and given verbally to the plant manager (with some amendment for confidentiality). An example of this report, from two dates, follows as figure 5.

To some extent the P-O's effectiveness was limited by her having to "replace" the PI--a friend and valued expert viewed by C/C as irreplaceable--as the HIRI representative.*

Consulting Interventions, Outcomes, and the Organization's Development

Most of the P-O's interventions consisted of day-to-day reinforcement of certain principles. For example, as problems or events were discussed she would ask whether those problems or events had been shared or discussed with the people concerned. Or, when anticipated job changes were described, she inquired whether those who would be affected had been consulted.

Most of these discussions occurred with managers, some with supervisors, and some with non-supervisory employees. Work with employees usually consisted of encouraging them to inquire of their supervisor about things that bothered them, to offer suggestions, and to voice concerns.

The P-O's style of informal one-to-one interventions makes assessment of outcomes difficult. Specific results may have occurred, but it is unclear in most cases that an outcome was causally related to the intervention. In addition, the P-O often was limited in her ability to follow up the development of a problem solution, since much of what was told her was communicated on a confidential basis. Therefore, most of the outcomes and events of this and later periods will be presented as occurrences in the organization's development, not necessarily tied to a specific intervention but relevant to the course of the QWL program.

One very valuable organizational development initiated by the plant manager was formation of a Plant Manager's Communication Group, consisting of one representative from each of seven teams in production; from two QA teams (bio control and chem control); from administrative employees (personnel, accounting, QA secretaries); and from Engineering/Maintenance. All of these persons were from the non-exempt or hourly workforce; none were supervisors

*The Centerton personnel manager, in his editing, remarked: "This is a critical point--the P-O was very willing and tried hard, but lacked the experience. Thus, sufficient consultant help was not available just when production started and the 'classroom training' was being put to the test."

Figure 5

OVERVIEW AS OF 5-23-74

Problems/Areas of Concern	Planned Followup
1. Stress caused by start-up delay (a) Complicates people's jobs with boredom, makework, discouragement, long hours.	1. Get more information directly from supervisory and non-supervisory personnel.
2. Need to assess extent of morale problems which may be emerging or present.	2. Get more information directly from supervisory and non-supervisory personnel.
3. Feedback and communication (a) Need to encourage the frequent giving of feedback about process and events to people directly involved in a situation.	3. P-O modeling and direct suggestion to individuals to give feedback.
4. Problems procedure (a) Need to develop a procedure to provide an outlet for employees' concerns, i.e., a problems procedure.	4. Collect ideas from supervisors--consider whether this should be an employee-developed procedure.

OVERVIEW AS OF 7-5-74

1. Managers/supervisors autonomy--major question among managers and supervisors now is autonomy. (a) This desire for autonomy is perceived by superiors as possessiveness or territoriality on the part of their subordinates. (b) Involvement of superiors is perceived by subordinates as lack of trust in subordinates.	1. Feedback observations to those involved. Encourage direct and frequent communication, if necessary by recommending regularly scheduled meetings until it (the communication) occurs naturally as needed.

or managers. They met at monthly intervals to discuss anything of concern to them, and to provide a face-to-face opportunity for the plant manager to communicate any information he might have to offer.

Consulting visits. A difficulty similar to that found in P-O intervention exists when trying to assign outcomes to interventions that occurred during consultant visits. An outline of visits and their major concerns will be presented, with outcomes interwoven in the material following this section.

In July 1974, the HIRI PD came to Centerton for a consulting visit. His time was divided equally between (1) individual developmental counseling interviews with certain managers and supervisors where request had been made for counseling, and (2) work with the plant manager, production manager, plant engineer, and the extraction department manager. The consultant tried to stimulate this "cast of characters" to diagnose some of the road blocks to more effective project implementation, adding his own observations. In the ensuing discussions, efforts were made to develop change plans with each person.

Two additional consulting visits were made to Centerton by the HIRI PD during this period. In September 1974, the consultant joined Drs. Howard Rosen and Robert Foster of DOL for a site visit review of the project. During that visit the DOL representatives toured the plant, talked with some persons at all levels, and attended a regular meeting between the plant manager and his staff. During the meeting, Dr. Rosen asked the plant manager whether he would still choose this participative style of management as worthwhile in relation to achieving organizational effectiveness. The plant manager replied that he would--despite some frustrating aspects such as a tendency toward slowdown of decision making and extra time spent in team meetings. The beneficial results, he indicated, seemed to be more open communication, more comprehensive input to the decision-making process, and greater ego-involvement in the job and in trying to overcome the plant's problems.

The HIRI PD presented a December 1974 training session (on improving organization effectiveness) to new supervisors. The visit also involved the consultant in discussions with the plant manager and personnel manager regarding a management critique held in November 1974 and some organization staffing changes made in early December 1974. Both of these latter two events are discussed on pp. 51-54. As opportunities arose, the consultant discussed with various groups clarification of the concept of PM.

Project documentation and feedback. In order to communicate about the project and to disseminate available feedback to the plant, the P-O wrote and distributed several documents: (1)August 1974--factsheet about the QWL project, intended for inclusion

in new employees' information packages (Appendix D); (2) October 1974--poster displays of the ISR feedback for each department; (3) January 1975--written explanation and interpretation of the ISR long-form questionnaire feedback; and (4) February 1975--restatement of the QWL goals with more specific definitions and indications of means to achieve the goals (Appendix E).

The ISR long-form feedback was used for discussion in each department. However, little activity was generated from this or other documents probably because the organization was not ready to initiate any activity around the QWL program until the production process was under control. Too, once production had begun, time away from production work for review and discussion with the teams seemed difficult to set aside.

Training. Training interventions included P-O help to the personnel manager in arranging and implementing a supervisory training program for newly-hired managers. Orientation to the C/C QWL program and to QWL theory and background was handled by providing them with reports, with Glaser's manuscript on QWL and productivity, and by having discussions of the material with them.*

In October 1974 a training program was offered for new supervisors. Attendees were primarily QA department supervisors. They seemed to accept and use the QWL concepts in the management of their teams. The transition to practice may have been made easier for these supervisors since they had the training at a time when they also had an ongoing team setting in which they could apply and test what they were learning.

Attention to growing concerns about advancement opportunities. In November 1974 the extraction supervisors and the P-O developed a proposal for an advancement system for the extraction teams. Initial discussions were held with filtration supervisors for a similar purpose, and the plant manager was kept informed of these efforts. The plan was to have the proposal submitted to the relevant employees for their suggestions and critique as soon as it had general feasibility approval from management, but consideration and implementation of these proposals were delayed because of production priorities. That is, while attention to job satisfaction goals of this kind was indeed intrinsic to the QWL objectives, the survival objective of getting the time/energy-absorbing plant operational problems straightened out preempted almost everything else during that period. The climate was something like "When you find yourself up to your armpits in alligators, you tend to forget that your mission includes finding a way to drain the swamp."

---

* The P-O (with consultant editing) wrote Progress Reports every six months through December 1974, then every two months through the project's end. While the reports were a grant requirement for DOL, they were also provided to the plant manager for his concurrence about problem analyses cited therein. He was free to distribute the report to managers and supervisors, but usually limited his distribution of it to the personnel manager.

Employee team experiences. In many teams, especially small ones, close cohesive relationships prevailed. The operators, probably because of their closeness and because they were kept informed of circumstances and reasons for events, continued to show much tolerance for frequent delays and changes. Supervisors had been given only minimal guidelines about team management in training sessions, and each developed his own style of operation with the group. The basic idea conveyed by the consultants was that where possible people should be given a choice or at least a voice in the various daily work decisions, and where that was not feasible (because of time, for example, or because of FDA-BoB regulations), people should be well-informed about the decisions and their rationales.

In some production teams and in some QA teams, group members volunteered for work assignments rather than having them assigned by the supervisor. Group problem solving was used in some teams to resolve matters such as responsibility for housekeeping. Which teams chose to assume responsibility for a particular function seemed to depend on a combination of supervisors' and employees' preference. In one QA team the supervisor felt it was the team's responsibility to assign their own work. He conveyed this to them positively and the group took on the task quite willingly. A production team asked the supervisor to assume the task of work assignment after a period of trial of team members choosing their day's work in the order that each member arrived. It happened that one member would come quite early and "cream off" the good tasks. The team felt a fairer distribution of the work would be given by the supervisor. (Of course, other alternative solutions were possible, but the supervisor accepted the job.) That production team reacted favorably to the supervisor's making the decisions about work distribution.

In July 1974 several production groups became involved in interviewing candidates for new team members. This participation in hiring developed from the discussion in the March 1974 team training workshops about pros and cons of such involvement. Supervisors still made the decision to hire, but weighted heavily the team members' recommendations. While team members in general responded favorably to this participation, employee participation in hiring did not continue after a trial of several months for three reasons: (a) as production increased, time for such activity became scarce; (b) team members found that their choice and the supervisor's choice of employees were often quite similar, so that even without interviewing they could count on a satisfactory outcome; (c) some candidates were inconvenienced and disturbed by the multiple interviews (an interview with the supervisor and a second interview with the team).

Job design. Training in job enrichment had been a significant part of the QWL intervention. During this period a job design change with problematic consequences occurred in the extraction department. A new team was created by the department manager

to handle the receipt and storage of the raw material and its pooling. Although the change was initiated through involvement of the deaprtment supervisors and with some consultation of team members, some observers in the plant felt that this change was a step backward for the QWL concept of job enrichment--the job is less varied and is only a small part of the extraction process. Too, that team was staffed by the most junior members of the other teams, and received only indirect or rotating supervision from the day shift supervisors and the department manager. At issue here was the question of whether a department manager should consult with the managerial staff before making a change that negatively affected job design and the QWL improvement concept. Consultation with other department managers was not held prior to implementation, and a precedent for independent departmental decisions in relation to use of QWL principles was set.*

Shift in QWL Presentation

Based on his own observations, plus inputs from others that QWL concepts might be responsible for some of the organization's confusion and ineffectiveness, the plant manager publicly announced that the QWL concepts were recommended and encouraged, but if not found effective for the individual they were optional. For some people toward the end of this period, the QWL method was "on trial." Some held the view that the method should be resisted until proven effective. The HIRI team felt that judgment should be deferred until the method had been thoroughly implemented. But at times C/C's urgency to produce and the handicaps they had to overcome to achieve production interfered with their commitment to give QWL efforts a thorough trial.

The plant manager believes this confusion and ineffectiveness was due in part to the initial training which gave the impression that within the family circle there would be no conflict. Openly dealing with such issues could be seen as an admission of problems within the family. This resulted in a situation where some individuals tended to wait for the organization to remove that which caused a conflict as opposed to approaching it one-on-one in frank and open discussion.

*Editorial comment from C/C is as follows: "This seems to us to be a significant overstating of the effect of this event. First, there was in fact consultation and involvement with supervisors and team members, the question being how much further consultation must be secured for establishment of a new team within a single department. Granted that there can always be a divergence of opinion as to whether or not action involving a single department should or should not necessarily involve plant-wide consultation, it is difficult to conclude that this was the precedent-setting factor claimed. This is especially true considering the fact that 'some observers' really consisted of the QA manager, whereas others felt it was rightfully the department manager's decision, recognizing the reality that each department has different functions, problems and expertise that will permit a certain amount of decision making without plant-wide consultation. In sum, the matter did not have the overall impact that is implied."

As pressures of production increased and differences of opinion became more evident, the openness and trust that had existed between managers, supervisors, and non-supervisory personnel began to diminish. The P-O and consultants spent much time modeling and encouraging the giving of feedback and pointing out in staff meetings the dysfunctional nature of withholding information or strong feelings. They also tried to get the C/C managers and supervisors to think about what needed to be done in order to increase safety and trust, and under what conditions one can responsibly choose not to communicate at times. Nevertheless, it appeared that the group was stubbornly resistant to change--or that when people did give feedback after such intervention, the consultants and P-O were often unaware of the outcome. (In most interpersonal relationships, the tendency to withhold frank expression of what bothers an individual constitutes rather customary practice, except when there is an angry confrontation or blowup. Yet this behavior was particularly maladaptive in the C/C situation because it exacerbated certain relationships already burdened with tension and conflict. Openness of expression would at least have brought out serious irritations and might have led to constructive change in a number of cases.)

Key managers' relationships and some important personnel changes. Antagonistic interaction between the production manager and his two department managers continued. The major differences were between just two of the three, but the third member suffered because his manager had limited time to help him. The P-O encouraged the plant manager to help resolve the problems, particularly by providing specific feedback about performance deficits to the managers, reaching agreement with them on a plan for change, and by following up progress on a periodic basis. In the Fall of 1974 this process was begun with one department manager, and some improvement in performance was noted. The plan was discontinued when the plant manager fired one of the managers. He felt that there was little hope of the major behavior changes that would have been necessary to improve this manager's performance within a short time.

During the last months of 1974, plant managers were required by corporate headquarters to review and justify every salaried and hourly position in the plant, and many positions were eliminated. In the process of this review, the extraction manager (as noted above) was terminated, and the former production manager filled that job. The position of production manager was at least temporarily eliminated so that the plant manager could be closer to the production operation and thereby achieve better control. The Filtration/Filling/Finishing department manager, an engineer by profession, chose at this time to move to the position of process engineer, and a new manager was brought in to direct the department. The position of assistant personnel manager was eliminated and the individual who had held the job became the finishing supervisor in production. One consequence of this particular cutback was to curtail the available support for the QWL project by personnel staff. (The position of assistant personnel manager was eliminated for reasons of cost savings. The others

were for reasons of organization strengthening.) The new structure is given in Figure 6.

After the personnel changes were made, some divisiveness among managers and supervisors (who had differing opinions of the responsibilities for the plant's performance problems) was apparent. This caused a further decline in the openness of communications and the willingness of people to speak out, to question, or to challenge the top managers on matters they disagreed with or felt concerned about.

November 1974 "kiem tau" or management critique. For several months prior to November 1974, the P-O and PD had suggested that the plant manager hold a "kiem tau" or managerial critique to review plant management and QWL goals, and the progress being made toward them. It was expected that problems could be discussed in the spirit of constructive inquiry, and action plans developed (or reaffirmed) for dealing with them.

Instead of this suggested critique, the plant manager decided in November 1974 to hold a meeting with a very specific and limited purpose as his agenda: to determine why so many intelligent people spending so much time in the plant could get so little done toward successful start-up. Small group discussions were scheduled, to be followed by a report back to the entire group of managers and supervisors.

The P-O felt that little systematic planning had taken place for the meeting. The precise nature of the small-group tasks had not been adequately defined, and the necessary leadership for the sessions was not provided. No sense of unified purpose emerged. Indeed, there was a disorganized feeling to the initial meetings, with the P-O pulling one way, the plant manager another, and the small groups attacking a random assortment of subjects. Despite this confusion, however, several factors were identified as possible reasons for ineffectiveness, frustrations, and disappointment within the organization:

(1) There was widespread confusion about authority of supervisors and when/how the leadership role should be asserted.

(2) The plant needed greater authority or influence to insure that corporate engineering consultants and other experts from headquarters stayed at C/C long enough--until key problems were solved.

(3) Many employees had unrealistic expectations for a start-up situation and, for the most part, managers and supervisors were too idealistic about what might be expected and needed for start-up purposes.

Following the first day's activities the P-O, along with at least one manager, offered feedback to the plant manager about the confusion being felt throughout the meeting. In response

BEST COPY AVAILABLE

to this feedback, he redefined the task the second day: to identify any blocks to progress toward production goals.

Many managers and supervisors felt that start-up problems were due primarily to technical difficulties, particularly in the Maintenance and Engineering departments. Much of the second day, therefore, was spent in detailed discussions of these difficulties. Many problems were identified and the plant manager committed himself to investigating some of them. However, he was disheartened because he felt that a number of the problems discussed could have been solved by managers and supervisors, whereas the managers and supervisors felt that major engineering and equipment changes must be made before production could begin. They implied that until these problems were solved, the plant manager had no right to expect the plant to be started. The plant manager, on the other hand, felt that many of the problems were attitudinal--a "can't do" spirit that resulted from a general feeling of discouragement over the heavy start-up difficulties.

The meeting was an unfortunate event in several ways. The plant manager had asked that a consultant not be present (although the P-O was) because he didn't want to convey the idea that "nothing happens unless someone from HIRI comes." The meeting was not well managed in terms of specific problem identification, clarity of tasks, or follow-up, and since critiques were originally associated with the QWL project, the connection was made in some minds that this conduct and outcomes (all general talk, no action) were necessarily typical of QWL programs.

Discussion

Results of confusion about the meaning of participative management. PM seemed to be used occasionally as a scapegoat when people were assessing blame for numerous problems in the plant. One manager called it "management by disorganization." Some efforts were frustrated for other reasons: critiques were not held, according to one manager, because there was no point in asking for ideas when you would not be able to implement them because of money and manpower shortages.

The QA department management group did not experience the same problems or confusion about the role of leadership as did other managers and supervisors. While they had some questions about team leadership and how to manage teams effectively, they thought that what was intended in training was that PM be adapted to one's own style. These supervisors benefited from a modification of the supervisory training program which portrayed management style as a continuum from McGregor's Theory X (an authoritarian style of management) to Theory Y (a participative style of management) and which suggested that supervisors find for themselves an appropriate and effective place along the continuum.

The consultants and P-O offered resources and opportunities for clarification regarding PM as a means of improving leadership, problem solving and general organizational effectiveness through training,

discussion, goal setting, and critiques. However, the plant manager and others felt that psychologically, physically and emotionally, people were drained from dealing with start-up problems and that it would be unfair and unrealistic to demand their additional energies and capacity to have the meetings and discussions for the specific purpose of QWL. From the HIRI team's viewpoint, any discussion of QWL would not be an end in itself, but rather a means for improving decision making, morale, and thus organizational effectiveness in ways that would facilitate dealing with the start-up problems, thus probably reducing the drain to which the plant manager referred.

Continued difficulty with problem solving. As already indicated, in the start-up period there were serious and difficult technical problems, the solutions to which were not readily forthcoming. Some persons seemed uncaring or overwhelmed in the face of these difficulties. Frequently, a general impression of inaction prevailed, often resulting from a failure to communicate about actions which in fact had been taken. Some supervisors felt that they did not have sufficient authority to solve problems, while some managers did not structure the problem-solving process enough to insure that a solution resulted. Persistent follow-up often did not occur. Some managers seemed unable to meet commitments, and no personal consequences ensued for such failure. Thus, the behavior seemed to have no short-term costs and was not changed. That is, a person could continue to make commitments but not follow through on them for months at a time with no adverse reactions except loss of credibility and loss of some support. (However, the plant manager pointed out in response to this description of lack of consequences that in his judgment the organization would not have benefited from additional stress that might have been caused by a strong "consequences" penalty system.)

In a number of situations, the plant manager was led by his feeling of reality-based urgency to intervene directly to reach a solution. By his modeling of expeditious problem solving that gave recognition to the fact that within technical areas especially, decisions cannot always be participative, he hoped to teach more successful methods to the managers who reported to him and to the supervisors who reported to them. Many of the managers, however, resented his interventions, which were informal and relied upon personal relationships and influence to get action. It seemed to some that he was subverting the group process to which the plant was supposedly committed.* One or two observers felt that the plant manager was able to solve problems by the use of his personal power, but this was not tantamount to using leadership skills. From that viewpoint they felt

*A very few people seemed to feel that the use of power or personal persuasion was not legitimate in a PM framework; most others felt that use of authority was justified, if deemed necessary, to carry out responsibilities.

they could not learn problem solving from him since they did not have such power to use. The plant manager probably did have a method (other than power) to his problem solving, but with a small group of managers, with so many vexing difficulties, and with rapidly shifting priorities, it seemed to him impossible to write down commitments, formalize, and tighten-up to attend in more detail to what seemed to him to be routine matters of people carrying through on their commitments and responsibilities with dispatch. The consultants suggested to the plant manager that he make his perceptions, values and reasoning explicitly clear to all concerned.

Comment on problem solving. Because of the abstractness in the problem-solving method, the blocks to problem solution could not be accurately delineated until so much history had accumulated that they were obvious. For example, it was not uncommon during meetings for the discussion leader to invite questions, ask for agreement on a matter, and receive no response--just complete silence. In many cases the leader took silence to mean agreement, support, or commitment--when, in fact, not even a consensual understanding of the particular matter was reached. As the plan or proposed solution was never reduced to written form, the apparent consensus of silence could mask unrecognized disagreements.

Inaction on problems was attributed more often to "people failure" than to other more specific possibilities, such as differently perceived agreements, inadequate manpower or resources, changing priorities, or underestimated time requirements. In those cases where a person seemed incapable of dealing effectively with the kinds of problems encountered in a given job, it was rare that either his job was changed or his skills improved. The plant manager saw no way to upgrade skills in simple, basic problem solving in a situation where the plant population was approaching start-up. The need for such skill training was perceived and appreciated by the plant manager, but he felt it had to be deferred to a later time and under different circumstances. The absence of sufficient feedback to responsible individuals and task teams about the perceived performance problems may have contributed to many failures.

Progress toward QWL Goals

Some QWL gains were made during this period. Communication was improved throughout the plant, primarily through the establishment of regular staff meetings in the departments. Participation in decisions about hiring, and policy development about seniority and layoffs, increased the employees' voice in work-related matters. (Teams reviewed preliminary and final drafts of these policies, often requesting and obtaining substantial changes. Input from all teams was synthesized by the personnel manager.) Jobs for the most part remained varied and challenging. The new pooling team did have a less desirable job, but

the job change was handled with consultation and consideration of employees.

Managers and supervisors became aware of some difficulties caused by the amount of variety or the breadth of the jobs in filtration teams. The original plan called for a filtration operator to be able to do all the jobs in filtration and filling; but a particular task might occur once a week, and if the teams rotated or were scheduled so that each team got to do that task, then one team did the task only once every three weeks. Such lack of opportunity to practice the task led to an inordinately long period before a group was thoroughly trained in any one task. The department dealt with this problem by making each team "temporary specialists" in one part of the process until they were thoroughly trained in it, then rotating to continue cross-training and to reach the goal of task variety.

The QA department held team meetings and critiques when needed during this period, and the teams functioned well, taking responsibility to solve problems and contribute ideas for improvement. Some personnel problems were experienced, but supervisors confronted them or sought help to do so.

February 1975 Project Status

By February 1975, the personnel manager described the QWL project as being "in limbo." Attention to QWL concerns had been constantly put off because of production priorities. Some supervisors remarked that the managers were "fair weather friends" to participative management; they felt that when problems arose the managers intervened without enough regard for the supervisors' or employees' participation. Finally, after the license for the second product was received, the managers met to consider the project's future and HIRI's role. The outcome of this meeting was agreement to narrow their objective to two points: increased involvement in relevant decision making with supervisors and operators, and the development of a feedback system to measure and communicate progress toward production goals (particularly at the operator level). Since, in February 1975, the PI had returned from his scientific exchange visit to Russia, it was HIRI's plan and the desire of C/C management ot have him reestablish a consulting role in the project.

Discussion of managerial progress. It is difficult to judge the swiftness or slowness of C/C's managerial progress. With an inexperienced staff, managerial development in relation to QWL concepts must move through three phases: (a) becoming a supervisor or manager, i.e., forming one's own style, learning supervisory skills, and adjusting to the new role; (b) developing a milieu in which one's subordinates can adjust/respond to the style; (c) expanding the scope of one's QWL concerns, as into the development of advancement systems in support of the QWL concepts. In light of C/C start-up conditions, it probably was not realistic to

expect much concern about QWL-centered systems or about the development of individuals during this period. Thus, some of the HIRI interventions may have been out of phase with managerial and operational needs at this time, including the company's reality-required pressure for very speedy profitable results. Concentration in helping supervisors develop better administrative skills might have been more appropriate.

Needed structure. The events of this period demonstrate how necessary it is to have concurrence of policy, method and structure. People were encouraged to talk out their problems, but the time and concrete organizational arrangements were not provided for them to do so. The value of regular team meetings was never demonstrated. A formal schedule and an understanding of a useful agenda for regular staff and team meetings might have spotlighted the effectiveness of the suggested procedures.

Participative or permissive management? At C/C, "PM" was often treated as if it stood for permissive management, and the plant manager felt that management disunity was in part a result of this perception. He felt what was taught about PM to inexperienced managers and supervisors "undid the normal expectations of managers." According to him, supervisors did not learn to support management once a decision was made. New managers who gave their supervisors much freedom heard a tremendous number of problems, concerns, complaints, and suggestions aired, but did not know how to achieve constructive closure. There seemed to be no time to stop and train managers and supervisors in the basic leadership skills, and their learning and development process was, therefore, slowed.

Focusing on Production Performance: Mid-February 1975 through June 1975

Plant Goals

Once product qualification had been achieved, managers could and did shift their attention to improving process reliability, increasing volume, and reducing expenditures. The plant manager's goal was to concentrate on building effective working relationships, including the development of problem-solving skills within the managerial staff (which he termed "building the organization").

Intervention Focal Points, Including an Interview Survey

The HIRI team centered efforts on finding a way to measure C/C's QWL status as perceived by managers, supervisors, and employees. That assessment would then be used as a basis for setting up new QWL goals, identifying specific objectives, and making plans for their future achievement (plans that would be implemented after HIRI consultation ended). The P-O's efforts also focused on integrating QWL concepts into managers' and supervisors' styles

and on increasing managers' and supervisors' attention to and awareness of differing individual needs for job satisfaction and growth.

In accordance with the plant manager's preference, the P-O worked toward these goals primarily through individual consultation and through interviews with a stratified sample of 45 members of the C/C organization. These interviews asked about members' perceptions of QWL goals and the extent to which they felt the goals were being achieved. The interview study results were expected to be the vehicle for the goal setting and future planning process.

Relevant Plant and Corporate Conditions

During this period, when the company was feeling the effects of the economic recession, managers and supervisors worked under strong corporate pressure to reduce costs. Plant managers had been informed that economy measures must continue until a satisfactory profit status was achieved. With the buildup of fatigue and frustrations and the voluntary resignation of a valued extraction supervisor, the new Vice President for Manufacturing came to the plant to assess the situation and determine what was needed to solve the problems. Constructive outcomes resulted from the visit; e.g., a task force of corporate executives was sent to study the situation, and help if possible. It was reported to the P-O, however, that some key persons in corporate management questioned whether what they perceived to be poor morale in the Centerton plant at that time might in part be an outcome of the managerial style encouraged by the QWL project. The avowed purpose of the task force was to address unresolved technical problems in the plant, and in principle QWL was not really a factor one way or the other. In any case, further events, such as the announcement in May of a two-week company-wide layoff due to occur in July 1975 as a result of excessive inventory resulting from the economic recession, continued to present challenges to the morale of the plant population.

The plant manager expressed the feeling that he wanted to make no new demands on the managers and supervisors; that they needed their time to address their job functions rather than evaluate changes or work on new ways of managing. Events up to this point of time were perceived by a number of persons at Centerton to reflect questions on the part of the new corporate management as to whether a participative style was entirely appropriate to the Centerton plant's operation because of FDA, BoB, and Good Manufacturing Practice requirements.*

*The new corporate management has frequently referred to FDA/BoB controls and Good Manufacturing Practice requirements as substantive reasons for their questioning the appropriateness of a QWL program and participative management concepts for application to the new plant. The consultants have felt that this

In April 1975, a tentative understanding was reached between the plant manager and the personnel manager, acknowledging that the latter's major strengths were in the traditional personnel functions of recruitment, employment, training, etc. He was not as strong in "sparking" the QWL program or getting out into the plant to resolve conflicts, counsel with individuals, or provide another channel of communication to the managerial staff. They agreed that his expectations in connection with these latter functions would be reduced, and that there was plenty of need at Centerton for the utilization of his many areas of strength. It should be recalled in this context that the personnel department had suffered cutbacks in authorized strength, thus placing greater time burdens on the personnel manager to attend to the more traditional but essential functions.

Consulting Intervention Outcomes: Spring 1975

A March 1975 consulting visit brought the HIRI PI back to the plant (joined by the PD and P-O) for the first time in months. The consultants found serious interpersonal tension, divisiveness, and frustration within the management group. It appeared that some reduction in these feelings must be achieved before effective plant operation was to be possible and before the QWL goals could be attained. The HIRI team felt that the problems had the best chance of being resolved if they were brought to the surface and frankly discussed by the managers. A series of communication meetings was held involving the Centerton top management group, with consultants in the role of discussion facilitator, catalyst, group process observer, resource person, and advisor if needed. The meetings consisted of giving invited feedback to each member in turn from all other members regarding what (if anything) each was doing or failing to do that interfered with the plant's optimal performance. The consultants encouraged acceptance of honest differences of opinion, immediate nondefensive confrontation of differences, and the provision of structured opportunities to maintain communication. The results

---

indicated a lack of understanding of QWL and PM, or an over-readiness to blame outside forces for the new corporate management's own misgivings about the suitability of PM, at least in connection with a start-up situation. The true intent of PM is to invite relevant suggestions or questions from any or all concerned on unresolved problems or on any matters regarding which employees feel they have worthwhile thoughts. In a responsive managerial climate, employees are motivated to care--to feel creative concern--and many of their inputs are valuable for identifying problems or contributing to their resolution. Decision making thus is likely to become both more intelligent and better understood/supported by those required to implement the decisions. Thus, in sum total, a PM style can take account of reality constraints such as BoB regulations, and be worth the time required to listen responsively, and in net balance, serve to enhance operational effectiveness.

were constructive in the sense of identifying and reducing very serious interpersonal conflicts that had virtually shut off effective communication between two members of top management.

To turn the managers' attention to stock-taking or formative evaluation of the QWL project, the P-O offered to do an interview study assessing employees' views of QWL goal achievement in the plant. The staff agreed to the study, which turned into a month-long project of 45 interviews, followed by a qualitative analysis of responses gathered. All managers and supervisors were interviewed, plus one or two operators from each team selected by the supervisor (at the P-O's request) who seemed to be especially objective about the company. When two operators were selected from a team, the request was for one relatively high and one relatively low performer. The P-O's planned follow-up included meetings with department staffs at which findings would be reviewed and plans made for further QWL development. This expected use of the QWL report (regrettably) was not explicitly negotiated with the managers prior to conducting the study.

The report on general organization findings and a specific department analysis, which was given only to the department manager involved, was distributed in mid-April 1975. The reports were considered confidential, but each manager was encouraged by the P-O to share the report with his supervisors (all did so) and with his peers. The General Findings section of the report is reproduced on pp. 63 to 65. A discussion of managers' and supervisors' use of the report will follow. Sections presenting comments from interviewees about how C/C differs from other workplaces, comments from interviewees about the organization in general or its management, and the P-O's recommendations regarding the QWL and organization effectiveness may be found in Appendix F.

Feedback to each group included findings from the interviews and short- and long-run recommendations from the P-O about improving QWL and effective management. In each department, the overall experience of those interviewed was reported as good. Where the job itself was challenging and varied (as occurred to the greatest extent in Engineering and Maintenance), people seemed to be most satisfied. The extent of employee participation, communication, and meaningful work varied in each department. Specific feedback from the interviews about the degree of attainment of these goals was presented in the department reports. The information was qualitative and from a fairly small sample within each area, but it provided a place to begin assessment and discussion within each group.

The P-O had great expectations of using the report as a basis for future QWL planning in the plant and the departments. The new QWL goals statement recently written by the P-O had been included to stimulate discussion and facilitate goal setting. But no prior agreements had been made by the P-O with the managers about the use of the report, and this oversight turned out to be an

error. Circulation of the report from manager to supervisors took as long as a month in several cases. Discussions were held between the P-O and each manager, but only one or two expressed any plans for intervention based on the information (except where action was already underway such as in designing personnel advancement systems). The plant manager felt that department managers should have a right to do nothing with the findings, if that were their preference, once they had discussed them with the P-O. The report was accepted as another small increment of information the department had about performance, but not something that required action.

APRIL 1975 STATUS OF THE QWL PROJECT AT CENTERTON AS DETERMINED BY HIRI P-O INTERVIEWS WITH 45 EMPLOYEES

General Findings

1. General Atmosphere and Participation

   There is high concern about and interest in plantwide success. Crown has an enviable set of relationships that require protecting. "Crown still cares about people"--this care requires renewed attention because from other cues, it sounds as if the organization may be at a turning point.

   "For success you must have a close knit family--we're all here for the same thing...and I think Centerton is doing this pretty well."

2. Quality of Worklife Project

   There is a lack of clear understanding of the Quality of Worklife Project, but most people could state positive differences between C/C and other places they'd worked.

   Some question was expressed about who "owns" the project--top managers or supervisors or the whole group (reflecting to some extent the division experienced among management). There was also some concern about who shall have a say in what that management style shall be.

3. Meaningful Jobs

   Most jobs--production, maintenance, QA and other service functions--have fair variety, the challenge of learning, some autonomy, and low feedback. There is generally unclear information about the possibility and procedures for advancement.

4. Communication

There is a general openness to criticism, a willingness to listen and to consider change (although it is perceived that there is less openness and more defensiveness among managers than elsewhere). People feel fairly free to give direct feedback though few do it except in some teams at the peer level.

At the supervisor-operator level, information exchange is generally informal (rather than in team meetings) and preferred so. (In fact, a remark was made that what is needed among managers is relationships, not meetings.)

There is a low level of positive feedback and to some extent, low performance feedback of any kind. Also, feedback is not often expressed in specific behavioral statements such that a person would know what to change upon hearing them.

There is some conflict or at least confusion about the role of the service departments. An attitude is communicated by some that if a person or department is not part of the direct production process, he or she or the department is not worthwhile or is at least of very low consequence.

Managers and supervisors select out the information they will pass on to team members, perhaps with a finer filter than is appropriate. Team members cannot participate if they don't have enough information. In addition, a plant-wide concern for success has been generated, yet plant-wide information is not available to each department to keep people apprised of progress.

5. Managerial Skills

There have been few negative consequences or even follow-up when commitments are not kept. While managers have a long time perspective, supervisors and operators who perform specific tasks have a somewhat shorter perspective; and to the latter, the delay in commitment-keeping or problem-solving has reflected poorly on managerial competence.

There has been a lack of methodical or systematic approach to problem-solving and to building interpersonal relationships, perhaps also insufficient communication about the problem-solving efforts which are in fact made (and may have been successful).

Skills in efficient meeting leadership are low; perhaps more preparation is needed, perhaps more training.

From the sample of 45 interviewees, the general impression given is that notwithstanding some criticisms or some things

that could be improved, relatively, in comparison with other companies that also have their problems, Centerton is seen as an exceptionally desirable place to work. On the whole, Centerton has particularly good interpersonal relationships and closeness between employees and management, and offers challenging, meaningful work.

Thus, despite many pressures and certainly a great amount of hard work, from the viewpoint of this third of the entire number of individuals in the workforce, the plant emerges as a well-regarded, progressive setup. The QWL program is given some credit for contributing to this favorable view, but the major credit for it belongs to the plant's management--with or without benefit of QWL concepts.

Comment on the QWL report use. Although the failure in most cases to use the QWL report as more than interesting information was disappointing, in retrospect there was no reason to expect that the report would generate action unless either (or both) of two things had occurred: (a) plans for support and follow-through had been clearly agreed upon by managers before the study was undertaken, and/or (b) the plant manager had used and asked his managers to use the report in the suggested way. There was no norm or model in C/C to indicate the need to do such future planning. The consultants themselves had not demonstrated or emphasized the goal-setting process in the early stages of the project, although as we look back this should have been done. To some extent the P-O was afraid that if she pushed early for commitments to active use of the report, the managers would veto the study altogether. It seemed more important to carry out the assessment at that time, even without such commitments. If we were doing the project again, regular review points and procedures plus standards for goal progress measurement would be recommended to management at the outset. A procedure such as the QWL interview study should not be taken until enough that a memo of understanding, in effect constituting an informal "contract," can be agreed to by all concerned.

One block that had inhibited goal setting and QWL progress review was revealed at the end of the project in the plant manager's responses to this report. According to him, he had perceived no need for (and no existence of) goals other than the one plant-wide goal: i.e., to get production successfully underway. The HIRI group recognized and fully appreciated the production goal, but perceived that there could be--and needed to be, if a commitment to the QWL method was made--a subset of objectives about how the main goal was to be achieved. It may be that this hitherto undiscovered difference in perception could well have been a key obstacle in many intervention efforts.

Managers and supervisors at this time did not recognize the need to deal with small problems of communication or participation

early, before they became significant sources of discontent. It apparently was difficult for the managers and supervisors to grant the same degree of importance (a degree that calls for action) to a personnel problem as to a process or equipment problem.

Final Phases of Consultation

In order to build a base of support and responsibility for the QWL project within the organization, the P-O suggested to the plant manager the creation of a committee with representatives from all organization levels to function as a QWL development group. It would seek new knowledge about QWL programs that might help C/C improve, would recommend goals and objectives to the managerial group, and would monitor QWL progress in the plant. The plant manager's response was that until greater production stability was achieved, C/C could not afford the time and energy required for such an effort. He felt too that the plant personnel needed more experience in the current arrangements before a structure was set up that might review progress and consider changes.

The concept of a QWL development group was a good, if late, idea. However, by the time the P-O recognized and pointed out to the consultants the HIRI team's failure to provide originally for an in-house steering committee, the plant was bedeviled with continuing technical start-up difficulties and the plant manager was under great pressure to get them straightened out. If the HIRI team had proposed this idea earlier, they might have helped the plant manager see that such an arrangement had real likelihood of strengthening his ability to cope with many of the problems he wrestled with each long day. In contrast, however, most managers commented in the October 1975 draft review that such a committee probably would not have altered project outcomes.

During this period, technicians and operators were becoming more experienced in their jobs and some of them had come to react to portions of the tasks with discontent, finding them boring and routine. Many wanted to hear more about advancement opportunities, preferably some in the near future. However, managers, and through them supervisors, became more concerned with cost savings and efficiency. In some jobs rotation was minimized for the sake of presumed efficiency, with preferences of operators overridden. Too, managers who were more accustomed to long-range goals than were first line employees found it hard to accept that employees, after less than a year of experience, were champing at the bit for new challenges and advancement. The P-O's interventions about job rotation and task variety wherever practicable did not seem to have much impact on managers and supervisors. There was clear acknowledgement by the personnel manager, though, of his responsibility to prevent insofar as practicable the design of jobs with little motivating potential. In the case of the P-O's relay of concerns about advancement opportunities, the managers, while not uniformly ready to act on this matter imme-

diately, nevertheless seemed to accept the legitimacy if not the urgency of employees' desires for advancement. In several departments, collaborative design of advancement systems by managers, supervisors and employees was in fact begun.

Some managers and supervisors began to "push down" tasks to their subordinates. For some this effort was perceived as developmental training; for others, a response to employees' needs for more challenging work. Interventions that encouraged regularly scheduled opportunities for communication seemed to pay off during this time. Each department by now was holding regular staff meetings between managers and supervisors, and several established or reestablished regular meetings with teams. For example, the Engineering and Maintenance department started holding a weekly communications meeting on Friday afternoons. Meetings between shifts in one department were held to deal with existing problems and increase communications so as to anticipate and avoid problems. Another channel of communication was opened when the plant manager began holding monthly meetings with representatives of each team in the plant. The purpose of the meetings was not only to share information and respond to questions or problems, but also to promote understanding among departments and between teams.

Efforts were made to meet the managers' objective to provide performance data. Comparative data about the plant's performance in two areas were provided to all employees, allowing them to see some of the outcomes of their efforts. Data from the corporate personnel department showed that the Centerton plant had an employee absence rate of 2.3 percent, the lowest among the company plants. Production yield data comparing Centerton with the West Coast operation also were provided.

Articles about QWL programs and specific components (e.g., safety programs) were distributed to the personnel manager and other staff members. These articles were intended to stimulate alternative ideas or solutions to certain types of problems when only traditional or standard responses were being offered to questions or concerns. When training plans were being made, the P-O recommended that present supervisors and managers become involved in supervisory training and in new employee orientation to share with new supervisors and employees their ideas and experiences with QWL concepts as applied in actual work situations. This was not done, however, because of (a) the need for the supervisors and managers to spend time in training in basic supervisory skills, and (b) a preference by the plant manager that each supervisor be encouraged to develop his own individual leadership style.

The managerial group appeared to feel that the series of communication meetings facilitated by the consultants in March had constructive and lasting effects. The plant manager reported a month later that some favorable change in interpersonal relation-

ships had occurred (he did not detail the nature of the change). During the April 1975 consulting visit by the HIRI PD, however, the plant manager expressed the feeling that less direct attention should be given now to attitudes and feelings; that the focus now should be on task performance effectiveness, and if attitudes/feelings or interpersonal problems appeared relevant to that objective, they then could be attended to ("People are tired of working on relationships instead of working on the job"). The consultant commented that attitudes, feelings, and interpersonal relations could be expected to significantly affect task performance, as already had been clearly demonstrated. If managers acknowledged the possible relevance of these factors, there might then be greater "readiness" to deal with them.

In the April 1975 visit, the PD followed up, through discussion with the managers and supervisors, on two points noted in the P-O's status report based on her interviews with 45 employees, namely, clarification of the meaning of PM, and a question that had come up about who "owns" the QWL project. While at the plant, he was asked to consult with a manager who was having some difficulty handling his job responsibilities. This involved personal interviews by the consultant with the manager and each of the supervisors who reported to him. Tension reduction and a more open work climate seemed to follow from this open discussion. Further, during observation of the weekly staff meeting which the plant manager held with all department heads, the consultant tried to facilitate more effective meeting leadership.

Another factor, in addition to the consultants' March 1975 intervention, may have influenced the increased degree of willingness in the Spring and Summer of 1975 to identify and confront problems openly. A new department manager had joined the company in January, and it was his style to address quite directly problems that bothered him (but not necessarily those that bothered others). He observed to the managers that the C/C staff avoided conflict and said that was not his way of doing business. This manager's behavior not only demonstrated the method and often good results from confronting problems, but also forced people to respond to him in such a manner, perhaps thereby learning to become proactive in facing up to problems. On the other hand, his style tended to be autocratic, and to de-emphasize employee participation in decisions affecting the organization and structure of the work. This led to resistance and tension in his group.

The final consulting visit by both consultants came in June 1975 when several meetings were arranged for evaluation of the QWL program. The consultants were asked to and did present their perception/evaluation to the managerial group about where C/C stood in the consultants' opinion with reference to the QWL project. The HIRI group then invited feedback from all managers and supervisors about their perceptions. (The evaluations follow in a subsequent section of this chapter.) Several developmental counseling interviews were held during the visit, and arrangements for future HIRI involvement at C/C were made.

After the June 1975 meetings, the P-O left the plant site except for brief weekly visits. Her help was available upon request, but it was little used. It seemed that C/C wanted to deal with its QWL program at its own speed and with its own resources. To a certain extent such independence is a desirable condition for withdrawal of a consulting intervention.

Progress toward Plant Goals

Strong production progress was being made during this time period, some of it a consequence of re-invigorated group problem solving, perhaps more of it from specific technical contributions made by the task force created to do this, and from specific qualified individuals from the plant and headquarters. Few major technical roadblocks existed now, none of which stopped the production process as had happened in even the recent past. The plant was licensed in May 1975 to sell an additional new product, and proved itself able to operate near full capacity. Data on product yield continued to improve--exceeding corporate projections and nearing the long experience record of the comparable West Coast operation. Concentration on problems in processing techniques among the four supervisors and the extraction manager led to a 33 percent improvement in one product's yield over a period of three weeks. A core of well-trained technicians was able to operate without much direct supervision. Promotions were made, including the promotion of a maintenance technician to a newly created supervisory role.

Managers' and Supervisors' Evaluations of the QWL Project (June 18-19, 1975)

Four meetings for QWL project evaluation were held during the last visit of the consultants in June 1975. Two of them involved the HIRI project team, the plant manager and the personnel manager, and two larger group meetings included (separately) the other managers and the supervisors. At the group meetings the HIRI team provided feedback to the group about their perception of its QWL progress, and solicited feedback from C/C about any aspect of the project.

In the opening meeting (with consultants, P-O, plant manager, and personnel manager), the plant manager explained some of the factors that had been involved in the recent decline of at least some managers' enthusiasm for QWL efforts: (a) based on their experience with, observations of and inferences they made regarding the new owners, local managers questioned whether the new owners valued or supported the QWL project at Centerton; (b) the plant manager didn't want his own Centerton managers to get any misimpression (and thus tell headquarters) that he felt having good interpersonal relationships took precedence over getting the plant into production; (c) the plant manager felt that the vice president for manufacturing might be wondering whether the previous management divisiveness at Centerton was in part due to

what might have been perceived as the permissive aspects of the project--the tendency to take pains to hear people out and understand their views--when at times firm decisiveness and demand for organizational discipline "or else" might very well seem to be more appropriate.

The evaluation meeting with managers was informal and unstructured. Following HIRI's feedback to the group (which included some of what is presented in this report), each member of the group contributed comments. The following points were brought out by various persons, including the HIRI team, with regard to how the project implementation might, in hindsight, have been improved:

1. HIRI should have been more assertive (for some managers), but was constrained by plant conditions;

2. ISR survey feedback was ambiguous--and so was its usefulness, especially as "one more thing to do" for managers already under stress;

3. there were weak spots in the content of training--insufficient attention was given to development of basic supervisory skills and to clarification of responsibility, authority, and the process of decision making in the context of "organizational discipline"--that is, support for decisions made until/unless those decisions were changed; also, not enough problem-solving training;

4. goals and standards for the QWL project should have been established and communicated more clearly to all concerned, perhaps with the addition of a "contract" or agreement signed by all concerned to signify understanding and acceptance;

5. conflict resolution seemed to have been avoided under C/C version of PM, in favor of maintaining superficial harmony, whereas more direct confrontation of issues on a face-to-face basis probably would have been better.

Some other observations were:

- Group problem solving and PM concepts had been responsible for significant achievements in at least one production department, and QA felt that the QWL style had been productive for their department.

- HIRI's availability for personal counseling had been of value.

- PM was just another name for good management and supervision; having another name created misunderstandings.

- PM made it more difficult to hire or fire.

- PM was a much more difficult managerial style than traditional styles, and there was a question as to whether it was appropriate to the start-up situation--although the organization should be using PM within six months to two years after start-up.

Because of the key role the plant manager played in the outcomes of the QWL project, his evaluative comments to the group are presented in full on page 71.

Supervisors met with the HIRI team on the day following the managers' meeting. The feedback presented here is from a rather limited sample of supervisors: no maintenance and no filtration or extraction supervisors were present (except a brand new extraction supervisor and one on temporary assignment to Centerton from the headquarters plant. Nearly all of the contributions were from the QA department. While the QA people felt very favorable to the QWL concept and practice, the spirit of the meeting was to inquire how the project or implementation might have been improved. In that spirit, they observed:

1. extensive emphasis on team meetings during training conveyed the (mistaken) impression that that was all there was to PM;

2. such emphasis tended to subdue <u>individual</u> initiative to solve problems;

3. more discussion and training with regard to the key ingredients contributing to effective supervisory style would have helped them develop more flexible ways of managing;

4. the (incorrect) impression was conveyed in training (both for supervisors and employees) that almost every decision would receive input from the group;

5. more help was needed in understanding and implementing job enrichment concepts;

6. the QWL project itself was unclear to some, despite the (admittedly) many written and verbal attempts to make it clear;

7. the company had unrealistic expectations about young and inexperienced supervisors' ability to manage;

8. provision should be made to orient new managers and supervisors to the Centerton management style after the formal project ends;

9. an in-house QWL development person, plus a responsible steering committee or QWL improvement committee probably would have provided needed support to the project.

During the final discussion with the HIRI group, the plant manager commented that he had not been able to devote the time he had expected to commit to the project because of the extensive and engrossing technical problems that had been experienced in the start-up situation.

Discussion

The greatest need throughout the plant's history has been perceived by the C/C staff as the solution of technical difficulties. Some expected the QWL program to solve their problems, then were disappointed when they felt it was not doing so. The plant manager felt, in reviewing the history, that "we taught QWL before we taught supervisors and managers how to do the job; but if you can't do the basic job, then you're not going to invite the P-O in to help with QWL." As a production supervisor put it, "We took what we could at the moment. Now (a year after start-up) would be the time to start a QWL intervention."

The need for strong managerial skills has obviously been a recurrent theme. At least one manager felt in his review that "If you have to be very basic (with the managerial-supervisory group in a given organization) about problem identification and problem solving, then you probably have no business (or there is not adequate readiness for) trying QWL." From the point of view of many employees, however, the QWL project has affected the work experience at C/C in a significantly positive direction.

Plant Manager's Quality of Worklife Feedback--6/18/75

The plant manager offered the following observations:

1. Key production people were selected more on the basis of potential than experience with process, manufacturing or supervision. Less than 50 percent had any experience in manufacturing or supervision. Less than 20 percent had start-up experience. Anticipation of problems and planning for them, and in some cases around them, was therefore very minimal. The net result was a lot of frustration for everyone involved. A very difficult job was made even more difficult due to lack of experience and mismatch between expectations and actual demands of plant start-up.

2. Initial training had certain deficits:

   - It gave major emphasis to a particular style of management but provided little training in basic supervisory skills. Authority of the supervisor as well as responsibilities seemingly was not adequately understood, and perhaps the training program should have anticipated this need and covered it.

- It set up ideal expectations without proper preparation as to what should be expected from a start-up situation, i.e., equipment problems, demands on personal time, etc.

- It did not provide sufficient training in problem-solving techniques nor define responsibilities and authority on the part of managers and supervisors to resolve problems.

3. Structure during start-up was too loose. Boundaries were very wide but lacked definition and understanding. It perhaps would have been better to start with well-defined and understood structure, then loosened after start-up and after major process and equipment problems were resolved.

4. Most training had to do with operating in a democratic way. The organization had very little flexibility for operating in an authoritarian mode when occasionally necessary; thus, there was not much commitment to those decisions for which people had no involvement. This lack of understanding and lack of flexibility presented major problems under the stress and pressure that the plant was subjected to because of financial difficulties. The organization was unable to accommodate honest differences in opinion about the nature of the problems that existed and the proposed solutions to them.

5. Because of many circumstances in preparation for and during start-up, there was little opportunity to develop meaningful relationships of mutual trust and confidence among the key members of the organization. Such relationships provide the glue necessary to hold an organization together under stress. This we did not have, and under stress the organization became very shaky and ineffective.

Crown/Centerton: July-October 1975

Intervention Status

Active HIRI involvement with the C/C staff ended as of June 1975. Since then, the P-O spent some time with the plant manager and personnel manager prior to a training session for new supervisors on the subject of management style. The aim of these discussions was not so much to influence the content as to assure that the plant manager clearly stated a management philosophy to the supervisors and his recommendations for supervisory style. The content of the training program was changed by the personnel manager to reflect some of the needs experienced earlier.

After the last consulting visit in June, the PD tried to facilitate corporate support or at least better understanding of the Centerton project through a meeting on the West Coast on

July 28, 1975, with the corporation's president, board chairman, and vice president for manufacturing. The meeting cleared up some misunderstandings and gained verbal concurrence about the merit of the QWL ideas in general. The corporate management agreed to allow the project to be completed as intended. (Their objection had only been to the completion of the comparison study with headquarters by ISR.) The meeting did not result, however, in communication of active support from the corporate to the plant level.

Centerton Personnel Changes

The months of July and August 1975 were marked by an unusual amount of change. There remained a restlessness among some employees, particularly managers and supervisors, about their jobs. Upon reutrn from the two-week layoff in July, a number of resignations were submitted in the management/supervisory level, although only one of these was unanticipated. The major determinants in the terminations seemed to be related primarily to the job content and expected lack of future promotion opportunities. Long periods of frustration and inability to solve certain problems because of financial strains contributed to the departures. Further, three supervisors were actively recruited by an employment agency for positions in another company. Changes occurred in the engineering manager, accounting manager, good manufacturing practices auditor (who left for a promotion to headquarters and an assignment out of the U.S.) and extraction supervisor positions.

QWL Expectations as of August 1975

A new supervisory training program was conducted in August by the personnel manager. It included substantial presentation of motivation and job enrichment concepts. The plant manager was ambivalent at this time about how much, if any, information should be presented to the newcomers about Quality of Worklife efforts and the concomitant managerial style.

In his presentation to the supervisors, the plant manager said that at C/C "We tried to create a different work situation for ourselves...[based on] some experience and evidence that people are more productive and more satisfied if they are involved."

The plant manager commented that he had learned (and it was known from the research literature) that different people have different capacities for using a participative style. Thus he urged the supervisors to respect their own feelings of readiness to use participative methods. "We approve of and encourage your experimenting with this kind of management--and there is no penalty if you don't succeed with this style...Find some style of supervision that works for you." He encouraged the supervisors to do two things: first, to invite suggestions and ideas about matters that affect their people; and second, to communicate thoroughly

BEST COPY AVAILABLE

about such matters. He pointed out that he felt that the management style did not need (and probably did better without) a "handle" like job enrichment or participative management; rather, the supervisors could better communicate their concern through their behavior. He brought out some of the advantages of group input to problem solving and recommended that they take care to design challenging and varied jobs with some closure (completion of a whole or substantial part of a product) to them. In this manner, he continued to support some of the key concepts underlying QWL improvement.

Organization Performance, September 1975

In mid-September 1975, the plant manager reported that production and other problems were gradually being solved and managerial performance improving. For example, critiques were being held by a multi-level, interdepartmental group after each product fill. With somewhat more time and a few new members of the managerial staff, the plant manager felt he now had the opportunity and the appropriate group with which to do some organization building. He had more time to go out into the plant and work with managers and supervisors on creating an effective supervisory style. Some of the training offered to new supervisors was being presented to the managers by creating time for it through extension of the weekly staff meeting.

V. EVALUATION, LEARNINGS AND RECOMMENDATIONS: WHAT SEEMS TO HAVE WORKED WELL... WHAT HAS NOT... AND WHAT MIGHT WORK BETTER IN THE FUTURE

In the complex experience of working out the relationship of the C/C organization developments to its QWL program, a tremendous number of trial-and-error adjustments have occurred. Much can be learned from this about how better to implement a QWL program and how to avoid certain kinds of pitfalls.

Conditions of the Intervention

The C/C intervention took place in a new plant, small in number of personnel, without a union, and in a rural setting. CMS had had positive experiences with the consultants in the past, and had tried some aspects of QWL experimentation on a small scale in another plant, with considerable success.

There were some significant adverse conditions which affected the project experience, as listed below:

1. The corporation experienced serious financial difficulties during 1972-75, thus the plant opened and operated at a time of severe financial stress. As a result of overall economic conditions and the tight money situation, the plant was on a very stringent budget during construction and start-up. This, together with the corporate drive to attain profitability, served to magnify problems that arose at the new plant site.

2. Unexpectedly, ownership of the corporation changed during the project. The new management had not been a party to the CMS-DOL-HIRI-ISR arrangement, and for a long period was not aware of its existence.* Thus, they had no personal

*When a draft of this report was submitted to CMS top management for their review, they commented as follows with reference to this point: "The new owners were not parties to this experiment and, when they learned about it in the course of time, demonstrated a generally neutral attitude. The project continued without interference and the contractual agreement to carry out the consultation was not abrogated. However, some individuals at the plant misinterpreted the lack of any particular involvement in QWL by the new corporate top management and considered it to mean disfavor. This understanding affected their commitment to that effort at the plant."

It may be that the intent of the new owners toward the QWL experiment at C/C was to manifest neutrality. However, the HIRI consultants found clear evidence among some key personnel in the plant that they were significantly affected by what they per-

investment in this arrangement and did not meet with the HIRI consultants and ISR for a discussion of the project until July 28, 1975.

3. Manufacture of the biological products produced at the plant was tightly controlled by the government through FDA and the Bureau of Biologic Regulations and Good Manufacturing Practices. Procedural regulations sometimes inhibited independence of action with regard to the manner of task performance.

4. Distance from corporate headquarters and from engineering and technical assistance was substantial, and inhibited rapid and frequent help on-site.

5. Only a few people in the C/C workgroup had significant managerial and production experience, and even fewer were knowledgeable about the special difficulties of start-up situations.

6. There was no influential CMS person at either the corporate or the plant level who was particularly knowledgeable about and competent in the practice of QWL interventions. The HIRI research project was on a tight budget, which sharply limited the amount of time the PD and PI could spend at the plant. One consequence of this was that the Centerton plant personnel manager, who was the primary plant staff coordinator and internal "champion" for the project, and who lost his own assistant personnel manager in the company's staff reduction to achieve cost savings, felt that he did not have sufficient time/support from the consultants (despite the full-time presence of the HIRI P-O) to continue his heretofore active role in the project. He was now too "snowed" by the bread-and-butter requirements for personnel recruitment, selection, etc.

7. The anxiety of inexperience, the strong corporate pressure to provide income by successful production, and the number and magnitude of problems with equipment and processes created an extremely high level of stress among managers and supervisors. This resulted in a widespread feeling that there was "no time" to do anything other than wrestle directly (literally day and night) with "debugging" the problems that were preventing the plant from getting into productive operation.

8. The plant had been scheduled to begin operation in January or February, 1974. With that in mind, the HIRI PI felt

---

ceived (or perhaps misperceived) as the new top management's probably unintended, but nevertheless, in effect, subtle sabotage of the program by means of withheld enthusiasm.

there would be no problem in continuing plans for a scientific exchange fellowship in Russia, which had been scheduled to begin July 1, 1974, about 4-5 months after projected start-up. As construction, equipment delivery and technical delays mounted, the plant was not able to begin operation until June, 1974. Thus the PI was absent during the problem-laden start-up period, with the PD and P-O covering his role as best they could within a budget that did not permit many visits by the PD who was located in Los Angeles*

What Worked Well

In spite of the difficulties described above, having the consultants and P-O in the plant stimulated new thinking, increased the range of considered alternatives in problem solving, and probably helped some people deal more effectively with an extremely stressful situation. As one supervisor stated privately to the HIRI PD at the conclusion of the October 1975 meeting held to review the first draft of this report:

> I'd like you to know that the opportunity to be here and participate in this QWL thinking about how to manage an organization has been a priceless and gratifying experience for me. I'm young, and this is my first supervisory job. Without the experience, training, reading and thinking about the concepts I've been exposed to here, I might have fallen into the mold of a traditional, authoritarian management style. What we've been talking about here and at least some of us have been trying to practice--usually with gratifying results--fits my values and personality. I will carry what I have learned here with me for the rest of my life, and for that I am grateful to you.

Or, as another supervisor commented privately after the review meeting:

> QWL concepts are continuing to be used in the production deaprtments. One should not expect the QWL concepts to solve the company's technical or financial problems (as some people seem to be expecting). The

*If the principles of QWL improvement efforts and PM had become a systemic part of C/C's philosophy and style of operating, the impact of a particular consultant's departure would not be severe. In this case, if that departure seriously attenuated the thrust of the consulting intervention, a major shortcoming pointed up thereby is that the QWL project was perceived by the C/C people more in terms of personalities than in terms of guiding principles, or not as basically a C/C project, with HIRI only in a resource role to help C/C implement it.

> QWL project did and does this: It makes operators and supervisors closer, more tolerant [of the jobs and of problems], and more willing to work...PM means that you respect the people who work for you. How you involve them (one-to-one or in a group) is less important.

Probably one of the most effective parts of C/C's QWL program was the design of jobs with large boundaries (despite some BoB limitations) and flexibility for individual task variety within teams, allowing for substantial motivating potential in the jobs themselves. Where there were generally undesirable tasks (such as cleanup) which nevertheless had to be performed, those tasks usually were alternated with other, more desirable ones.

Employee teams seemed to recognize the advantage of cooperation and moved to give help to other members and even other teams where needed. In many teams there was appreciable openness, with numerous suggestions from employees for work improvement and a willingness from most to question management if they felt it necessary.

The managers, supervisors, and original production technicians (those hired in February-March 1974) took part in writing personnel policies and procedures by which they would be governed. As the necessity for a new policy would arise, a draft of the policy was reviewed by the teams. Suggested changes were incorporated where possible, and the revised policy then issued. As a result of these procedures, there were few difficulties or complaints about the policies, and there has been good compliance with them.

Within departments where changes in the work arrangements or policies were planned, these changes were usually discussed with employees before implementation. Where shift schedules had some flexibility (as in maintenance), the technicians had some say about the final arrangements. Where systems (such as advancement systems) were as yet incomplete, supervisors and employees usually took part in their design. Such regular participation in design and in planning seemed to make for smoother implementation of the change.

Managers and supervisors were for the most part sensitive to employees' communication needs. Substantial efforts were made to pass on information about plant and corporate events. Improvement in information flow was made over a period of months, particularly when regularly scheduled staff meetings were established. Even when the staff was under stress, unhealthy rumors contributing to contagious anxiety were minimal.

One department in particular assimilated and applied the concepts of the QWL project quite thoroughly. The QA department seemed to use participative methods of decision making, had several teams that took on responsibility for self-direction (using the super-

visor as a resource person), and held critiques after major task efforts. Some special conditions distinguished this department from most of the rest of the plant. Its employees were semi-professional people (mostly with training in biochemistry or microbiology) who had at least two years of college. Further, the entire department worked on one shift (and thus could get together more easily), and the group had a reasonable workload without the equipment or process problems that beset the production group. Of greatest significance to the implementation of project goals was the department manager's outspoken and public commitment to a participative style of management.* He conveyed his expectations to his lab managers and supervisors, encouraged them to attend training sessions and use consulting resources, and modeled the expected behavior himself. He was very specific and persistent in his task demands--to the point of appearing autocratic at times--and fought forcefully even to the corporate level to get policy or procedural changes he felt were needed. His supportive behavior was responsible for the integration of the project concepts into the day-to-day operational style of the QA department. That is, for the QA department, participation was the work-style, not the idealized goal of a research project.

The concept of participation (if sincerely applied) suggests to employees that management recognizes and respects them as individuals, not just as contributors of needed labor or skill. In the Centerton plant this philosophy of respectful regard for individuals was generally practiced and had several beneficial effects for the corporation. The new plant and the expectations for a better worklife seemed to give managers, supervisors, and employees greater psychological and physical energy and stamina to commit to the demands of start-up. Too, it seemed that employees had greater tolerance for the frustrations of delay than they might have had in a traditional setting. The ISR survey data tend to confirm these P-O observations.

What Did Not Work Well Enough... And from Which There Are Lessons to Be Learned

There were some issues and areas that created confusion and problems and some things which just didn't work out well. It should be kept in mind that the Centerton plant is still young and developing, and that projects of this type often require a longer period than more traditional interventions before the desired outcomes can be achieved.

*It is worth noting that he felt from the outset that his performance as a manager would be judged not only by whether the QA department could do its professional job, but also by how well he implemented the QWL concepts in his department.

In pointing up problems that prevented consistently effective implementation of QWL concepts, we will be basing our comments primarily on data from the production department. The quality assurance department understood, adopted, and implemented QWL principles effectively, beginning immediately after the initial QWL training workshops. The other departments were somewhere between these two extremes, but for the most part the critical difficulties in implementing the QWL project occurred in the production department.

Relationship between C/C QWL Project and Corporate Headquarters

The corporate headquarters had reason to feel supportive of the consultants and of the QWL project at its inception. The subsequent change of management and the financial difficulties preceding that shift lessened attention to the project. The consultants had no direct relationship with the new corporate heads. Making contact, setting up a relationship of trust, clarifying the QWL philosophy, and reconciling it with the new management's aims could not be achieved in time to muster support for the program. Yet, in carrying out an innovative program it is essential that contact be maintained with the influential members of the hierarchical ladder. Where an innovative program may run counter to existing policies or philosophies, it becomes particularly important that constant clarification of the goals and feedback as to the progress of the program be offered those whose support is necessary. Otherwise the effectiveness of the program can be jeopardized.

It is important to add that most of the perceptions that Centerton plant members (and, through them, HIRI) had about the new management's philosophies came from inference. No direct statement about philosophy or about convergence with or divergence from QWL concepts was ever made. Early clarification of corporate position should have been elicited as the management change was made. This was not done because HIRI's points of contact with corporate headquarters advised against making a special point of the C/C project when the new management's attention was focused on major problems of turning the company around from a position of serious financial loss to a position of profitability.

The authors have no estimate on how rapidly new management could have been rallied to the support of the QWL program. That it would have been essential to full program success cannot be doubted.

Staffing Problems

In the original selection of managers and supervisors, C/C may have built in some handicaps for itself by at times emphasizing technical background (even if narrow and not directly related to production of biological products) over demonstrated managerial

ability. In other cases individuals were selected on the basis of their developmental possibilities and "potential comfort with QWL concepts," rather than on the basis of combining such comfort with either a record of technical experience in extraction (which was hard to find), or at least with a record of effective managerial performance in a manufacturing plant. Such a combination --if persons with all these qualities could have been found-- would indeed have been desirable.

The time demands of the start-up situation did not allow C/C to capitalize on the supervisors' and managers' developmental possibilities. In addition, the Centerton plant was handicapped by the selection of two managers with a long background of interpersonal friction between them at the home office plant where both had worked. Their transfer to Centerton was made as a calculated risk, with knowledge of their previous history. They both had extensive, valuable experience in handling a group of biological products that were very sensitive and difficult to produce on a regularly repeatable basis. There were few persons with such experience who could be spared from the home office plant, and in fact relatively few in the country (or even in the world) with this sort of specialized know-how. Both wanted to move together into this new situation where they could "start afresh," and the risk seemed worthwhile.

The plant manager, while a graduate engineer experienced in production and plant management, was not expert in or experienced with the technology of producing the kind of sensitive biologicals which the Centerton plant was designed to turn out. Thus, he had to depend on his production managers and on the quality assurance department for the carry-through of the plant's intricate technology.

The choice of an individual to be personnel manager, who also would have prime responsibility for support of the QWL program, is quite important for the success of the intervention. While the personnel manager in Centerton had a substantial background in traditional personnel work, had good administrative skills, had fine conceptual knowledge of the QWL ideas, and was a gentleman with personal integrity, he did not provide a particularly dynamic model in training or in shop floor counseling. He did not offer a high degree of public advocacy of QWL concepts. His sometimes hesitant responses to initiatives for change or exceptions to rules may have stifled willingness on the part of others to bring suggestions or requests to him. In all fairness, however, he was hindered by having a limited staff and by having to devote so much time and effort to trying to get the corporate personnel department to make certain exceptions to corporate policies and procedures necessary for the QWL project. This was misunderstood by some managers and supervisors as reluctance on his part to make changes. The fact that so much of the responsibility for providing internal C/C staff championship and monitoring of the QWL project was given to the personnel manager

rather than having this function performed by a steering committee from all levels of the plant was an error in intervention planning.

Turnover of Non-Supervisory Personnel

In the long run, less turnover occurred among QA and E/M personnel than among production employees. Some managers suggest that the QA and E/M employees had more realistic expectations about work because they were hired by experienced managers rather than inexperienced supervisors, and because they had less exposure to the QWL orientation training which some managers came to feel may have stimulated over-idealistic expectations regarding what they would have to do on the job. Of great importance, though, may be the fact that these employees (QA, E/M) always had enough work and usually challenging work to do. In contrast, there were many long periods during the first four to six months of start-up when production employees felt semi-idle, working primarily at housekeeping tasks rather than being directly involved with production tasks. The resultant disappointment, boredom and frustration of production employees may have influenced the greater turnover in these departments.

Problems in Training and Transition to Practice

In his critique of the QWL program, the plant manager suggested that the QWL program did not meet the need for basic supervisory training, but the HIRI team never saw this as one of its responsibilities. In discussing this difference with the plant manager (1/30/75), he agreed that this may not have been part of the HIRI responsibility. He thought that the HIRI role in this regard was never explicitly stated. Whatever the cause, it became clear to the plant manager and to HIRI consultants that most of the production management group at C/C did not have the essential managerial and supervisory skills. This deficit alone was sufficient to account for many of the problems that arose, not only in the implementation of the QWL program but in all facets of plant life. Without adequate managerial and supervisory skills, the HIRI workshops on group leadership, decision making, and individual leadership responsibility were not sufficiently attuned to the "learning readiness" of the managers and supervisors.

In effect, HIRI consultants attempted to train C/C managers and supervisors in participative management principles and techniques before these individuals had sufficiently developed the essential management and leadership skills. The HIRI consultants' failure in this regard was in not recognizing the deficiency in basic supervisory skills in time to recommend ways of remedying it before proceeding with further training in participative management techniques.

BEST COPY AVAILABLE

To put this problem in another way, the content of the training program did not adequately meet the need for basic supervisory training or for establishing goal-setting, planning, or problem-solving skills. The program design was based on over-optimistic assumptions about the skill levels of incoming managers and supervisors, and the nature of what they would be called upon to do in order to create and sustain a successful QWL program. The self-modifying checks which would have allowed the training program to be altered when this became apparent had not been included. The C/C design, we discovered, needed to be modified to clarify or elaborate the following points:

1. Decision making: Who makes the final decision and how binding is the decision when there is disagreement in the group.

2. Responsibility: The prime responsibility of the manager or supervisor to get results, but without pre-empting the sense of responsibility necessary to each team member.

3. Appropriate organizational discipline in a QWL environment: In an environment where good, close interpersonal relationships are sought between supervisors and employees or managers and supervisors, it seems to be difficult to correct subordinates or apply sanctions if and when problems arise. It seems to be difficult to be a friend and to be firm. Exploration of the difficulties and help in achieving a good balance needs to be provided to the managers and supervisors.

4. Leadership responsibilities: The program did not include sufficient focus on group leadership skills, such as how to elicit effective participation, how to achieve closure with or without consensus, and how to develop common understanding of how a decision was reached and who would be responsible for implementing it. The PI did model this and did explicitly discuss the relevant principles, but apparently more time, repetition and emphasis on this subject was needed with this group.

5. Contraindications to the use of QWL concepts.

Although time was spent both in the training programs and in personal consultation on interpersonal feedback processes and on cultivating nondefensiveness, conflict at C/C was not faced openly and with goodwill. Because frank feedback involved risk--real or merely perceived--for the individual, the problem-solving

process was slowed down significantly by the withholding of open communication.*

To facilitate the transition from training to operational practice, HIRI had counted on managerial models and on strong assistance from the P-O. Those models and that assistance did not suffice. Some confusion developed among managers and supervisors about the kind of leadership image to present. Some managers and supervisors felt that there was no place for strong (assertive) leadership in a participative environment. Varieties of leadership designed to meet different circumstances were not adequately demonstrated. The inhibition of leadership in the sense of close monitoring for excellent performance was perceived by some supervisors as contributing to overly long tolerance of employee performance inadequacies. This, in turn, created some misunderstandings and less than optimal results.

Difficulties in Implementation of QWL Objectives

Several managers questioned whether the start-up period was an appropriate time to begin the QWL intervention, i.e., whether there was "organizational readiness" for the program. Given what was learned about the basic skills of the participants, perhaps the project should have been implemented in stages, beginning with a few concepts, clear translation to practice, and good modeling. The consulting resource help that was available then might have been used more effectively.

In the implementation plan, there was no specific internal group or influential individual with clear responsibility to advocate the project. The personnel manager functioned as a liaison and trainer for the project. The plant manager's staff seemed to be the relevant decision-making group, but the plant manager never really gave them (or some subset of them) responsibility for implementing and monitoring progress of the QWL efforts.

The plant manager initially spoke of assuming this responsibility himself. However, as production pressures on him grew to an almost overwhelming degree, and as he encountered confusion about

*In contrast, however, the plant manager commented in his review that he felt too much attention was devoted to trying to facilitate good interpersonal relationships and that this left the impression that if they were not good the organization could not operate effectively. He pointed out that many organizations do operate successfully without special concern about the character of interpersonal relationships. He felt that we should have concentrated more on how, in terms of managerial and supervisory skills, to get the job done, with consideration of interpersonal relations as relevant primarily to that context--thus as a means to the end of operational effectiveness and not (as he perceived it) as an end in itself.

and misinterpretation of QWL concepts, his own commitment seemed to weaken. This inadvertently encouraged those managers and supervisors who were not strong supporters of QWL to begin with, to revert to a more traditional managerial style, and aroused doubts even among the enthusiastic advocates.

A written set of mutually agreed-upon QWL objectives with specific implementation plans was not established, nor did the plant manager have the overt public commitment of the staff to the QWL goals and how they would be implemented. When the agreement in principle to the QWL project was made during the plant design stage in 1972, it was apparently assumed that no explicit administrative, job design, or implementation guidelines needed to be spelled out by the management group. The C/C managers and supervisors expected that implementation would be achieved through training and consultant visits, as well as through basic support from the plant manager. They did not recognize the need for (or have time for) more detailed planning than this. The consulting team should have provided more guidance and should have anticipated these potnetial problems from the outset.*

Another planning deficiency was the absence of contingency plans to deal with unexpected situations. During the long start-up delays, advance planning would have helped find work or training for idle operators, minimizing the toll in disappointment and cynical attitudes. The inexperience of Centerton managers and supervisors was a handicap in this regard; few knew that they would need such plans. To be sure, some problems could not have been anticipated, but the practices of planning might have helped managers deal with surprises.

As new managers and supervisors were selected in 1974 after start-up, they were encouraged by the plant manager to get the job done with whatever was their natural style. They did not have to make a commitment to PM, although they were encouraged to consider that method to attain ego-involvement of their workforce and thereby achieve the necessary productive results. New managers did not attend the training program for new supervisors. This treatment of new managers and supervisors reflected the fact that QWL efforts were still considered a peripheral project rather than a basic philosophy and management orientation to which the Centerton plant was committed.**

---

*As well, it would have helped if C/C had been more willing and more able to respond to the feedback and guidance that were given during the course of the project.

**As Rush (1969) points out, companies that are satisfied with behavioral science programs usually do not view them as programs but rather as "a completely different way of improving and managing the enterprise."

The problem-solving system and performance evaluation in the plant needed to be supported by a reward system; as it was, anticipated consequences did not spur people to keep time commitments or project completion target dates. Here again, the lack of feedback of positive results undermined the potentially self-rewarding aspects that should be inherent in a QWL program.

The development of some individuals outpaced the opportunities made available by the corporation's standard staffing patterns. The creation of a new or modified job was believed by the plant personnel manager to be a difficult and lengthy process requiring much corporate review. The anticipated delays inhibited active initiatives by Centerton managers or supervisors. Perhaps a mechanism at the plant level could have been established so that the creation of new jobs or new positions could have occurred when needed, so long as this could be accomplished within given budget boundaries.

Effects of Optional Use of QWL Management Style

Because adherence to QWL principles of job design and management style was recommended but definitely optional, the managers and supervisors at C/C who tended to use the concepts were those individuals for whom the QWL philosophy was congruent with their values and beliefs. This suggests that sincere belief in the indicated style of management and a strongly felt concern about QWL on the part of managers and supervisors are important factors for the success of such a program. Where the individuals' values and concerns do not happen to support the QWL efforts, it is probable that organizational systems must require application of at least the basic concepts if the program is to succeed.

Limitations in Consultation and Participant-Observation

During the training period, the consultants and P-O possibly could have been more effective had they created more situations in which to demonstrate workable strategies for effective problem solving and exercising leadership. With sufficient practice in managerial skills of this kind, some of the time later lost by means of trial and error might have been saved.

Budget limitations affected the intervention achievements in several ways. It was not feasible to have a widely experienced, full-time professional at Centerton acting as P-O. Instead, a very bright, personable, but relatively inexperienced doctoral student in organizational psychology was recruited. It is unclear whether the management and workers in the small southern plant at Centerton could be as accepting of a P-O who was a young woman as they might have been of an older man, even though he might not have been as capable. The complexities of the task proved difficult for her to handle. She was in need of much assistance from the consultants; but the physical distance between

the P-O in Centerton, the PD in Los Angeles, and the PI in Nashville served to limit communications to mail and telephone, whereas frequent face-to-face project review meetings (not permitted by the project budget) would have been much more helpful.

Consulting visits were relatively infrequent; follow-up initiatives begun during a visit could not be carried through (by the consultants themselves) until considerable time had passed. More importantly, the principal investigator (chief consultant during the first year of the project) went to the USSR on a scientific exchange before the plant was able to get into production, although start-up was originally scheduled 4-5 months before the PI's departure. Whether due to the PI's absence or not, several of the production teams abandoned team meetings after start-up. Thus, there were fewer opportunities to practice what had been learned in the earlier workshops. It was during the PI's absence that the plant manager and his staff felt great pressure to get licensed quickly and into production, and also during this period that the plant manager (presumably in tune with corporate management) moved further away from whole-hearted support of the QWL project. Upon his reutrn, the PI was informed by the P-O that the QWL project thrust had been seriously attenuated, at least in the production departments. His visit in March 1975 tended to confirm in his own mind the correctness of the P-O's assessment. He never became substantially reinvolved in the project for three reasons: (1) he felt that he probably could not salvage the QWL project for the production department within the time and resources available (including limitations of the PI's own available time); (2) he felt that the project director was now more in the thick of things and better able to attempt salvaging it than anyone else; and (3) his close personal relationship with the manager had suffered because of his absence and the events that occurred during that period. It is understandable how the plant manager, from his perspective, felt that the PI had abandoned him when things were at their worst.

Certain unique developments in the plant may have limited the impact of the consultants as well as of the P-O. For example, one of the difficult consultant-organization issues was the perception by the plant manager that at times the consultants were used by other managers and supervisors as a "court of appeals" in the sense that the consultants would listen to any gripes someone might choose to bring up with them, and that this action delayed acceptance of the plant manager's authority. (This "court of appeals" rubric, it should be noted, also applied to interventions by the vice president for manufacturing.)

Corporate Perception of
Major Program Limitations (February 1976)

At the February 2, 1976 meeting between the HIRI PD and P-O, and CMS corporate top management people for the purpose of reviewing

this report, the president of CMS stated*:

> The new management at corporate headquarters believes in participative management. But when the house is burning you can't have a 'palaver brigade'. When things are settled down, then you can have a participative approach, but not in a brand new factory with brand new people. Thus, perhaps start-up was not a good time or setting in which to undertake such a study.

The manufacturing vice president added:

> The experiment probably should not have been tried until people had learned their professional jobs. People at Centerton may have misunderstood the project or weren't ready for it. If they were, we'd be for it. Some people used this project to cause problems and troubles--or as an excuse for not getting their essential jobs done (resourcefully, effectively, and with dispatch). You get unhappy when you don't know how to do your daily job--thus you look for excuses. Under such conditions, personnel get frustrated with themselves, and talk their frustrations over among themselves, thereby enlarging them.

The Centerton plant manager summarized as follows:

> During several months (November 1974 to about April 1975) this was the worst situation I've ever lived through, but I still subscribe to the QWL principles. People (supervisors and managers) tended to discontinue team meetings because they had lists of things calling for attention a mile long, and didn't see any need to add to them. We selected people who were compatible with this type of management, but unfortunately not qualified as results-oriented managers, plus not having had relevant production experience.
>
> Some people thought they were being judged on relationships rather than results; they were confused about the leadership role (to see to it that results were achieved expeditiously). Too many people seemed to have the mistaken idea that everyone needed to be involved in almost all decisions, and didn't seem to realize that some decisions could and should be made without meetings. But all this (errors by some in interpreting the intent of the QWL program as originally planned by HIRI with the

*These quotations are not precisely verbatim, because the meeting was not recorded; they are derived from notes taken at the meeting.

Centerton plant manager) doesn't change my basic beliefs in the QWL concept, properly applied.

We seemed to have created the idea that there would be no conflict at C/C, and they were not prepared to deal effectively with conflict through open confrontation when it occurred.

The section of the report I'd differ with most was the writeup of the November 1974 "kiem tau" meeting. That was not held, from my intent, to review QWL goals and progress. Rather, the objective was to find out why so many intelligent people whom we had brought together in Centerton could be so ineffective in this time period as an organization.

The people felt that participative management was something they should feel (and thus automatically implement) and not just talk about.

Some key people have felt that I, as plant manager, should not think of starting the plant until all major equipment that was giving us problems should be ripped out and replaced. Thus, I felt (in November, 1974) that the ship was lost unless X, who was the vocal leader of this viewpoint, was replaced. It was at this time and under those circumstances that I felt I had to change my managerial approach to one-to-one relationships in order to get into major unresolved problems and try personally to help break the bottlenecks and "can't-do" attitudes that were preventing us from getting things done and achieving some success. This approach of getting into problems myself, on a one-to-one basis, was regarded by some as an unwarranted intrusion, which in turn was a terrible disappointment to me, because as plant manager I felt it clearly was my responsibility, for the benefit of all concerned, to do whatever it took to get the plant's problems overcome and functioning well.

Some aspects of the QWL projects tended to set up divisiveness, such as when I felt a need to function nonparticipatively to solve what I thought were some crisis situations, many of my decisions were viewed as out of bounds and not supported. We had an attitude of "the Centerton plant constitutes a family circle." When that was broken by my firing X under the stress of what seemed to me necessity, it disrupted the plant and the divisiveness occurred between those who perceived and concurred with the necessity for what I did, and those who thought it unfair or unwarranted.

In conclusion, I guess I now question whether in a highly technical plant start-up situation a QWL approach is a

good fit, or whether it would be a better fit following the shakedown cruise, making obviously needed repairs, and getting into seaworthy condition.

The HIRI team can appreciate these feelings, but believes that through learning what we hope and believe can be gained from this experience, certain major pitfalls can be avoided and the QWL effort thus can be successful, beginning with initial planning and working through the problems of start-up.

HIRI Post-Intervention Evaluation

Another kind of evaluation was attempted in February 1976, seven months after sustained active intervention by HIRI. The following memorandum addressed to the plant manager, production manager, and personnel manager at C/C (Figure 7) is self-explanatory. The questionnaire was distributed to 19 managers and supervisors: eight in production, eight in QA, and three in administration. In response, the personnel manager wrote:

> Your evaluation request triggered one of my own. Since our meeting on the West Coast (February 2), I had been considering a questionnaire to get input from others at C/C as a check against my own perceptions and evaluation of the QWL program--specifically an evaluation of HIRI's role. I felt this would be of value for you as well as for us. So, I "piggy-backed" on your questionnaire.

The "piggy-back" questions added by the personnel manager specify the areas where he felt the HIRI effort was weak.

Responses to the HIRI questionnaire have been received from 18 individuals, 17 of whom also responded to the personnel manager's questionnaire addition. Their ratings (and all write-in comments received) are presented in Figures 8 and 9. The net balance of the responses clearly is on the positive side, but perceived weaknesses stand out sharply.

One important lesson from this is that consultants should not give up their own vital interest in carrying out periodic formative evaluation--for their own and the client organization's information needs--just because they have been relieved of the evaluation responsibility by the grant agency. In the original project plan, HIRI would have carried out this kind of simple (but relevant and meaningful) evaluation about every three months. With ISR receiving a grant for evaluation half again larger than HIRI's grant for intervention, and with HIRI feeling constricted for funds, we "let ISR do it."

Had ISR not been in the picture, HIRI would have had to take periodic soundings and bearings of this sort. In that process, we would have received written feedback of perceived weaknesses in the intervention sooner than we did and, together with the client in our joint venture, promptly would have worked on remedial procedures.

Re : C/C evaluation of impact of the HIRI-DOL QWL project

While I expect all of us--and certainly EG, CI and MFC--would agree that in several respects our project could have been handled better than was done at some points in terms of planning, implementing and following through, that is not necessarily to say that it has been a "failure." To judge failure-success, the fair and reasonable procedure would be to rate it in terms of the criteria (the objectives) that were set forth at the beginning of the project. Then we can ask ourselves what have been the results or impact after a reasonable time (such as now), rather than at some particular crisis period (such as between November 1974-April 1975). Or, to what degree has each objective or hoped-for outcome been achieved?

In this spirit, we would very much appreciate your distributing this letter and the accompanying questionnaire to all managers and supervisors, in production and QA, who have been in the plant long enough to be able to respond to the 11 questions with a fair basis for their judgment. The questions were taken from the section of my book which attempted to describe/define what we meant by a QWL program.

Since we are under a great deal of time pressure to complete our revised report, and this questionnaire should not require more than 5-10 minutes to answer, we hope all concerned will mail it back to me promptly. (Signature is optional, but preferable.)

Figure 8

C/C Rating of HIRI-DOL QWL Effort, 1973-75

Directions: Each of the eleven items below concerns an element of the climate and modus operandi at C/C that might or might not have been influenced by the HIRI project's efforts. We'd like you to tell us whether there have been any such influences by marking an "X" at the appropriate point on each rating scale.

Rating Scale:

+5	0	-5
Appreciably greater degree now than probably would have been the case if we hadn't had this QWL project	About the same as would have been the case if we hadn't had the project	Appreciably less now than probably would be the case if we'd never had the project

(Continued)

Figure 8 (Continued)

1. An ever-present opportunity for individuals or task groups at any level to influence their working environment; to have some "say" over what goes on in connection with their work.

Write-in Comments:

- In my estimation, this resulted primarily due to the efforts of the QA Manager, not HIRI.

. . . . . .

2. An organizational climate and structure that really encourages, facilitates, and is respectfully responsive to questions or suggestions related to improving the existing modus operandi in any way.

Write-in Comments:

- HIRI definitely influenced the structure and proposed an atmosphere designed to encourage employees to participate, but provided only minimal personal counseling in order to aid implementation. Further management interaction sessions would have been valuable.

- After a relatively short period of time, a feeling of resentment regarding the project seemed to be evident in upper management.

*Overall Rating = Sum of all responses, divided by number of responses. Note--total N will vary from item to item, since not all respondents answered all questions.

Figure 8 (Continued)

3. Making the job itself more challenging by structuring it so that an individual or small work team can perform, "self-manage," and feel responsible for a significant, identifiable output if that kind of responsibility is desired.

Write-in Comments:

- As with other aspects of the QWL program, this should be an ongoing and refresher type of training.

4. An environment that encourages continuous learning, training, and active interest regarding the job, and the product or service to which the job contributes. A setup that enables an employee to use and develop his personal skills and knowledge, which in turn affects his involvement and self-esteem obtained from the work itself.

Write-in Comments:

- Impossible to evaluate because of start-up, ownership change, etc.

Figure 8 (Continued)

5. An organizational setup that breaks down the traditional status barriers between management and production or support personnel--achieving an atmosphere of open communication and trust between management and the workforce.

Write-in Comments:

- Seemed to have a communication breach between upper and lower management. Increased the already apparent tensions.
- This segment of the QWL program needs to be reemphasized. On several occasions the attitudes of upper management have been dictatorial rather than following a course of affirmative action. This leads to a closing of communication channels, rather than creating an open atmosphere.

6. Provision of training for supervisors to equip them to function effectively in this less directive, more collaborative style.

Write-in Comments:

- This particular industry seems to lend itself to this form of management naturally.
- Supervisor training was sparse during the HIRI involvement but has presently reached a state of total stagnation.

Figure 8 (Continued)

. . . . . .

7. Provision of opportunities for continued growth; opportunities to advance in organizational or career terms. *

Write-in Comments:

- The absence of career counseling at C/C severely retards the growth of those individuals who must serve as a pool for future managers. It also does not permit an individual to direct his/her attention to those areas of personal weakness, unless aid is given in the recognition of these areas.
- Some members of lower management were hampered by their support of project.
- We have set up some provisions for hourly employees, but not any for exempt--still have the "traditional."
- No basis for judgment--there is none.

---

* This was a long-range project goal to be worked out with corporate top management. As of December 1975, two managers from Centerton have left to accept major promotions within the corporation, and several persons at Centerton were upgraded. When new product lines are added at Centerton, advancement opportunities there will be greater for more personnel than has in fact been the case up to this time (2/76).

Figure 8 (Continued)

. . . . . .

8. Provision not only of feedback with regard to results achieved, and recognition for good results, but also financial incentives such as cost-savings-sharing as a tangible form of recognition where feasible. *

Write-in Comments:

- Most feedback received is of a negative nature. Without a cost-savings-sharing program, a corporation can not expect its employees to continue their efforts without some form of recognition. Also, why is C/C the only sister plant without a cost-savings-sharing program?

- Some limited provisions for feedback--we should have had much more--nothing unique or innovative in compensation provisions.

- Plenty of feedback re performance (or lack of it), but not much help achieving goals.

---

* Provision of a cost-savings-sharing plan is considered very desirable by the consultants, thus included here as a long-range goal. It was recognized from the beginning of the project, however, that Crown top management did not feel ready to move in this direction. Systematic feedback of results achieved and recognition for good results should have been better attended to, and not lost sight of in focusing on problems.

Figure 8 (Continued)

. . . . . .

9. Selection of personnel who can be motivated, under appropriate conditions, to "give a damn" about striving for excellence in task performance.

Write-in Comments:

- An excellent job of hiring was done at C/C

. . . . . .

10. Evaluation and analysis of results, including failures, leading to revised efforts toward continual improvement.

Figure 8 (Continued)

11. Achievement of better-than-average performance results; that is, getting qualified (licensed) by BQB to ship products in reasonably good time, getting good yields, high quality, few bad batches; in short, superior productivity or superior cost-effectiveness in plant operation.

Write-in Comments:

- Too much time wasted in theoretical discussions on how to solve problems and relate to others, instead of learning by working together to solve real, actual problems.

- The QWL program probably hindered this effort because of the large amounts of time spent analyzing problems (rather than solving) and numerous training sessions for employees in P.M. (rather than practical work training).

- The overall goals and methods are excellent, but the project should not have been implemented during an inadequately funded start-up, aggravated by poorly trained operators and a high degree of urgency needed to make plant qualification. The project could have been more effectively implemented in a young, but stable, plant.

- This area is "clouded" by all of the technical and equipment problems/delays we experienced. If these had not occurred, I think we would have had a really exceptional plant qualification and superior productivity, if it had not been for these factors which were not caused by our QWL efforts but which impeded them.

Figure 9

C/C ATTACHMENT TO HIRI QUESTIONNAIRE

In your evaluation of HIRI's QWL project for our Centerton plant, we would appreciate your opinion of the assistance which HIRI offered. Did they adequately assist you in the following?

1. Planning the project and communicating the objectives so you had a clear understanding? Yes 7 No 10

   Comments:

   - I think that I understood the HIRI objectives, but was confused by the different interpretations of C/C management as to the objectives and how to achieve them and the change of viewpoints with time.
   - I had a clear understanding. However, the evidence indicates that others did not. I believe that closer follow-up and commitment of upper management would have helped greatly.
   - I never understood the objectives. They were idealistic and unrealistic.
   - I still do not believe I have a complete understanding of the project.
   - Planning was adequate, but apparently adequate communication was lacking. As late as November '74 we were getting questions from supervisors re "What is participative management?," "What is a supervisor's authority?"
   - It is my impression that there was a great deal of confusion about what QWL was and what its goals were, so it seems there must have been failure somewhere to communicate objectives, etc.
   - This only came in the last six months of the project.
   - The objectives seemed to change through the year.
   - Objectives were always somewhat vague, up until the end of the project.

2. In anticipating QWL project problems and assisting in avoiding or solving them? Yes 6 No 10

   Comments:

   - HIRI had better assistance than CMS for non-QWL problems.
   - I received excellent service because I aggressively sought it.

Figure 9 (Continued)

- I think this is the part of the project which was most neglected. We should have had a detailed listing of problems to be expected and actions which would have avoided problems or helped us to quickly resolve them.

- We created problems by getting data that we couldn't understand or know what to do with it.

- I believe that there was a lack of direct experience with the work situation on the part of HIRI people, which was compounded by the lack of experience of CMS personnel hired to start up the plant. I believe that a prior study of the West Coast operation regarding working conditions, dissatisfiers, pressures, organization interactions, etc., would have been of great benefit prior to starting the project.

- Solution for wrong problems.

- Have already cleared up most problem areas.

- This would have been possible only if HIRI was present on a more routine basis and MFC had not been shackled by the plant manager.
